GARDEN.

#### SPECIAL NOTICE.

 $O^{N}$  account of the increase of our Seed and Bulb business, we find it necessary to devote our whole time to those departments: therefore we have disposed of our interest in the following articles to Mr. I. White. We would respectfully solicit for him a continuance of the patronage hitherto bestowed on us. WASHBURN & CO.

A FTER referring to the above, I beg to state that all orders for the following goods shall be promptly filled; and my customers and friends may rest assured that they shall have the greatest care and attention:

FANCY FLOWER-POTS.—Ampler's Vases, and all styles of Hanging-Pots. FLOWER-POTS.—All sizes, singly or by the hundred.

#### FRUIT AND FLOWER BASKETS.

A SPLENDID ASSORTMENT.

Garden-Lines.

Plant Trellis, Floral Rings, Hearts, Crosses,

Plant and Tree Labels,

Water-Pots,
Vine-Protectors,
Grafting-Wax.

Guano, Potting-Soil.

#### CROCUS-POTS.

In the form of Hedgehogs, Baskets, Columns, &c.

IMMORTELLES and DRIED FLOWERS.—A large variety, in various forms. RUSTIC WORK.—A fine asssortment of Flower-Stands, Settees, Chairs, Baskets, &c. PRESERVING-JARS.—Both Glass and Tin. All the best patterns.

# BOUQUETS, WREATHS, CUT FLOWERS, AND FLORAL DESIGNS, ARRANGED TO ORDER.

Orders by express or telegraph will receive prompt attention.

#### FUNERAL AND WEDDING FLOWERS PRESERVED

IN THE BEST MANNER.

WHALE-OIL SOAP.—For destroying Slugs, Grub-Worms, &c., on Plants, Rose-Bushes, and Shrubs. In packages of from two to twenty pounds each. Labelled with directions for use. Prices: 2 lbs. boxes, 50 cents; 5 lbs. boxes, \$1.00; 10 lbs. boxes, \$1.75.

GARDEN-SYRINGES.—All the various patterns, among which are the celebrated Pool's Syringe. Prices from \$1.25 to \$12.00.

HYACINTH-GLASSES. — Variety of patterns. Prices from \$1.50 to \$6.00 per dozen. Particular attention paid to orders for TREES, PLANTS, &c.

## TO OUR FRIENDS AND CORRESPONDENTS.

We have much pleasure in submitting to your notice this new edition of our "Amateur Cultivator's Guide," which, in the past, has been so popular with the lovers of horticulture. We feel assured, upon examination, this will be found to far surpass any existing work of similar description: we have spared neither time, trouble, nor expense in its compilation. It has been our endeavor to make it reliable, not only in the description of the great number of flowers and vegetables which are enumerated on its pages, but equally so in the full and complete practical directions for the successful growth of every variety.

The arrangement, though different from our last edition, is not new, having been adopted by eminent foreign dealers. To many it may not be very important; but, to the mass of our customers, we think it will commend itself as highly useful. All flowers and Flants are divided into natural groups, and to know the character of one of these groups gives an idea of the whole. The Aster and the Coreopsis are familiar to almost every cultivator; and, when it is known that these belong to the composite order (Composite), it will at once be understood that any unknown plant belonging to this order resembles, in some respects, the above flowers. It is to convey this general information that we think the addition of the natural order is highly important.

It will be seen that we have omitted many varieties from our last edition which we deem scarcely worth cultivating, to avoid confusion, and to give greater space to more

desirable kinds.

The character of every plant, whether annual, biennial, perennial, for the greeen-house, or whether hardy, or half-hardy, is stated; and, with our prefatory remarks upon the culture of each, there can be no difficulty in their successful growth. In addition to this information, our remarks on laying out flower-gardens will, we hope, not only prove a valuable

aid to amateurs, but assist in disseminating a true taste for gardening art.

As specialities, we refer particularly to the very extensive list of NOVELTIES, many of them of rare merit, and difficult to obtain. Other specialities are our choice selection of French and German flower-seeds, particularly Double Asters, German Stocks, English Double Hollyhocks, Camellia-flowered Balsams, Carnation and Picotee Pinks, Double Zinnias, Double Portulacas, &c.: and of green-house plants, the Cineraria, Calceolaria, Gloxinia, Pelargonium, Chinese Primrose, &c. Many of these are of our own growth; and others are received direct from growers who produce their own seed, and some of whom raise them expressly for us. In our collection of German, French, and English flower-seeds we feel especial pride; for they contain all the truly beautiful varieties obtained in Europe during the last ten years, all selected especially for us, and never surpassed, if equalled.

Our Vegetable Seeds are such as we can recommend with the greatest confidence;

and, though we have not had the opportunity to test the latest additions, the dealers from whom they have been obtained leave little doubt of their real value. In conclusion, we have to acknowledge our indebtedness to various authorities for names, as well as occasional hints, and more particularly to that valuable book, Burr's "Vegetables of America," to Buist's "Kitchen Garden," and to numerous English catalogues.

Owing to the greatly increased expense of publishing a work so extensive as the present edition, we are reluctantly obliged to make the nominal charge of TWENTY-FIVE cents per copy, upon the receipt of which it will be mailed to all applicants from any part of the United States or Canada.

Address,

WASHBURN & CO., HORTICULTURAL HALL, BOSTON, MASS.

## TERMS, CONDITIONS, ETC.

Letters received.—All letters received are opened by one of the principals, and replied to by return mails. To facilitate carrying out this rule, we would respectfully ask our correspondents to give care that their orders may be written distinct from remarks and inquiries, that it may be seen at a glance, and filled with greater ease. Make letters as brief as possible, as it requires great labor to attend to the hundreds daily coming in at the busy season; write the address plainly, and give the full name, with Post-office address, County, and State. We occasionally receive letters with no other address than the town, and in some instances without signature; which, of course, cannot be answered.

Execution of Orders. - Our rule is to despatch all orders as soon as received; but, as there are only a few months of planting season, and everybody anxious to get their seeds at the same time, it is sometimes impossible to prevent a delay of a few days: we make it a point to fill all orders in rotation, unless in cases of extreme urgency. It will be greatly to our advantage, and to that of the buyer also, if the orders are sent in early in the season, before the rush comes; and then we can give more attention.

Seeds, Bulbs, Plants, &c., by Mail, To any part of the United States where there is postal communication. The new postage-law authorizes the sending of SEEDS, BULBS, ROOTS, CUTTINGS, PLANTS, and SCIONS, at the rate of Two CENTS for every FOUR OUNCES in weight, — the weight of the package not to exceed FOUR POUNDS. Under this law, any of the seeds or bulbs named in this Catalogue will be mailed, free of postage, at the prices quoted, with the exception of PEAS, BEANS, CORN, and POTATOES, for which an additional remittance of eight cents for every pound is required.

Remitting Money. Orders from unknown correspondents, to insure attention, should be accompanied with cash, or satisfactory reference. Remittances may be made in current bank-bills, or, what is better, Post-office orders, registered letters, or checks on Boston, New York, or Philadelphia.

Risk in sending Money, or Loss of Seeds.—Where Post-office orders, registered letters, or checks, are sent, they will be at our risk (but do not hold ourselves responsible where bank-bills are sent), and will guarantee the safe arrival of the goods at their desti-

Despatch of Orders. —In giving orders, please state explicitly by what conveyance they are to be forwarded, and, if by express or railroad, the names of the parties to whose care they wish them consigned at the various places of transhipment. When no particular route is designated, we forward according to the best of our judgment; but in no case do we assume any responsibility after the packages leave our hands, unless for our own mistakes, which are always cheerfully rectified.

Quality of Seeds .- As regards the freshness of our seeds, or their quality, we have nothing to add. Our numerous customers throughout the country know us too well to ask any additional guaranty than that of the many years we have labored to place before them all the treasures of the flower-garden or conservatory, selected from the best sources in Europe and our own country, or grown or originated by us. Our long correspondence with the cultivators of England, France, Germany, and Prussia has enabled us to be the first to possess every thing new, whenever introduced. The novelties described in our present Catalogue are nearly three times the number of those enumerated by any dealer in

As we occasionally hear complaints concerning flower-seeds, that they do not meet the expectations of the purchaser, fail to vegetate, &c., and as seedsmen in general are often accused of sending out worthless seed, we would, in justice to ourselves and others, beg of our patrons to give the following remarks a careful perusal:

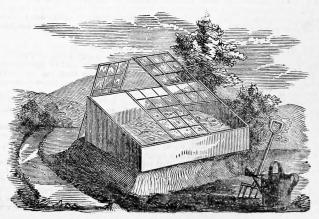

We are well aware, and happy to state, that our seeds do generally give perfect satisfaction (this we learn from multiplied testimony yearly increasing); but now and then a grumbler steps out, discouraged, and disappointed that the flower did not prove what he expected. This, certainly, can be no fault of ours. We aim to find accurate descriptions of all that we advertise; but we cannot guarantee to meet the wants of people who are expecting to realize their own ideas of flowers. For instance, we speak of some fine variety, a delicate beauty: it comes up modestly, breathing sweet perfume, a perfect specimen of tits kind; while the sower is surprised and disappointed, expecting to behold some showy, brilliant flower. Also, of double flower and distinct colors, we give the greater care in selecting and testing, making perfection our standard; but, nevertheless, single flowers will sometimes peep out, and mixtures cannot always be avoided. We find that some varieties are less reliable than others; but, while the good predominates, vex not over the simple loss of a few seeds, but try again with us to reach the standard.

That seeds oftentimes cease to grow is an established fact; but it is equally certain that that fact alone is no positive proof that the seeds are worthless. Probably ninety per cent of all the flower-seeds sold in this country go into the hands of persons who have no idea of how seeds should be grown. Many of them, perhaps, accustomed to putting into the ground peas, beans, radishes, &c., fancy themselves acquainted with sowing seeds in general; and, when they fail, the blame is laid, not upon their ignorance, but upon the seedsmen. Is it to be wondered at, then, that there are occasional complaints that seeds do not grow?

An example of two, about which there can be no mistake, will explain our meaning. A few years since, some seeds sent from India to a great garden near London, where any amount of skill ought to have been found, were, in part, sown, and reported on as "bad, —will not grow." Two years afterwards, what remained of the original seed, although so much older, was sown, and it grew freely. Why was this? The explanation is simple, — the gardener had been changed. We have many times planted seeds which refused to grow, and, after waiting a sufficient time, have then planted more out of the same parcel, which vegetated readily. This is not an uncommon occurrence among gardeners. And why is this? We would answer, that the fault may have been in planting, or in the weather, or in some cause unknown; but one thing we do know,—the fault was not in the seed.

Complaints that seed are not good are perennial; and we quite believe, that, in nineteen cases out of twenty, they arise from injudicious treatment. We think a little consideration would convince any one, that, if we know our own interest, we should not be likely to send out poor seed, for the sake of saving a few shillings, at the risk of sacrificing the trade we are striving to extend. Nothing, indeed, is more barbarous than the way in which seeds are sometimes treated. Some are overwhelmed with earth; others are scattered on the surface; some are allowed to lie in a puddle; some are planted where no rain can reach them; slugs are allowed to devour them; domestic fowls and other birds are permitted to feast on them. Another reason why seeds sometimes fail to give satisfaction is, that people are too much in a hurry to get their seeds into the ground; and probably more disappointment arises from too early sowing than from all other causes put together. And then, again, many will allow the weeds to grow with the seeds, until the former cannot be removed without destroying the latter; and we have known more than one case where the plants have been pulled up with the weeds,—the person not being able to distinguish between them. In all these cases, the seeds are found to be in fault, and the blame is most unreasonably thrown upon the seedsman.

We would suggest to our friends who fail to grow their seeds, that it may be as well to inquire whether any of these ingenious methods of destroying vegetable life have been practised in their own cases.

HOT-BED FRAME. - See p. 1).

# Summer Flower-Garden;

CONTAINING

BRIEF DIRECTIONS FOR THE CULTIVATION OF ANNUAL, BIENNIAL, AND PERENNIAL FLOWER-SEEDS.

NNUAL flowers are not only among the most beautiful ornaments of the summer flower-garden, but the ease with which they are cultivated, and the long time they remain in bloom, give them the highest claim to our attention and care. Without them, however much we may admire the various showy bedding-plants, a continuous and uninterrupted display of flowers, from spring till frost, cannot well be obtained; and when we add the charm of novelty, and the still greater one of variety, we have only enumerated a few of the claims of these most desirable and effective ornaments of the

gardens of "the million."

In consequence of their simple culture, and the small amount of trouble they give to the amateur, as well as their comparative inexpensiveness for their rich array of beauty, they are yearly becoming more generally grown. Bedding-plants are charming objects; but the yearly propagation required for geraniums, verbenas, &c., the labor of potting and watering, and the expense of wintering them, are not within every one's means; but a few dollars expended in seeds, and a little pleasant labor in the sunny days of early spring, will give an amount of real enjoyment beyond belief. The most desolate garden may be made a scene of beauty in scarcely more than a month's time. Annuals are not what they were in former days. The skill of the hybridizer in the production of new varieties, and the diligence of the enthusiastic florist in the selection of the finest plants, have entirely changed the character of many of these flowers; and, if to this we add the new acquisitions from Japan, how could we well make up a summer-garden without them? What should we do without the grand Pæony-flowered Asters, the brilliant double Zinnias, the boldly-marked and rich-colored Petunias, the Double Portulacas,—like miniature roses,—the Heddewiggi Pink, the Tropæolum, &c.? These give an entire new feature to our annuals, to be cherished by every lover of beautiful flowers.

We therefore make no apology for giving a few brief hints on the cultivation of these, as well as some of the biennials and perennials, equally important in the decoration of the

flower-border.

#### ANNUALS.

Among florists and gardeners, the term "annual" is given to those plants which are sown in the spring, bloom and seed in the summer, and soon afterwards perish. A few are included among annuals, like the Marvel of Peru, &c., because they flower the first year; but they are only annual as regards treatment. By cultivator they have been divided into three classes; viz., Hardy, Half-Hardy, and Tender Annuals,—a very convenient classification; and as such we shall treat of them here.

#### HARDY ANNUALS.

These are so called because they do not require any artificial heat at any period of their growth, and are capable of enduring any ordinary weather from April to November; a frosty morning, not unusual in the former month, or even in May, doing them no injury, if advanced beyond the seed-leaf. Many of them may be sown in Autumn; and the young plants will make their appearance early in spring, and flower stronger than when it is deferred till April.

The Soil and its Preparation.—The best soil for annuals, and indeed for most flowering plants, whether biennials or perennials, is a light, rich loam, neither too sandy nor too stiff.

In such they grow readily, and attain to great perfection of bloom, with but little care; but it is hardly necessary to say, that few persons have just such a soil, nor is it possible often for the cultivator to have much choice. He must take such soil as he has, and make the most of it; and by the application of proper manures, or sand or clay, he can bring it to such a condition as to answer all the purposes of a flower-garden. Moving large masses of soil is very expenas to answer an the purposes of a hover-gauge. However, the large masses of son is very expensive; and writers who advise the addition of rich loam seem not to be aware of the difficulty of procuring it, or the expense and labor attending the same. For the complete garden of the of procuring 15, or the expense and abor attending the same. For the complete garden of the wealthy, this may and should be done; but the mass of cultivators need not fear of obtaining good results without it. Deep and thorough trenching in the autumn, if possible, and the application of very old decayed manure or leaf-mould, will give the amateur a well-prepared and suitable soil. If the situation of the garden is low or damp, first of all it should be well drained; for, in addition to the injury from excessive moisture, such soils are cold, and the young plants are injured by early frosts, when they would escape damage in one of the opposite character: neither should the situation be too dry, as, in this case, the one of the opposite character: neither should the situation be too dry, as, in this case, the plants would suffer in summer, and present a meagre in place of a vigorous bloom. Where the soil is too light, a thin layer of clay, if to be had, spread over the surface in the autumn, and dug in, after being pulverized by the winter frosts, in the spring, is the best remedy. This, with the use of old manure,—that which has lain a year or more, and been frequently turned over till it becomes thoroughly decayed,—will keep the garden in good condition. No unvarying rules can be given: much must be left to the judgment of the amateur. He must understand that the soil of a good garden should be deep, well pulverized, friable, and rich; and, if the opposite, to make it as near that as possible.

When the flower-garden is to be a speciality, - a piece of ground set apart for that object, and laid out in geometrical order, and all the beds edged with box or thrift, - then more pains ought to be taken; and those who are about to do this, if they have not the requisite information, will consult something more than a catalogue. Our hints are intended for the mass of the people who love flowers, who have but little leisure, and do not wish to incur great expense in the gratification of their taste.

Period for Sowing. — This must depend much upon the season as well as the locality. Our Northern springs are so variable that no definite period can be named. As a general rule, the proper time to commence sowing is about the middle of April, though a few sorts may be planted as soon as the ground can be got ready; and, for a succession, the sowing should be continued until June. In the Southern States, of course, January, February, or March will be the time to sow, as they correspond with April, May, and June of the North. The Californian annuals, now so numerous and so ornamental, are very hardy, and should be sown early, as they get well established before the heat of summer. To avoid all danger of injury, the sowing may be deferred till the last of April; but, when a little labor is of no consideration, the sowing may be made earlier; and, in case of failure to grow, or subsequent injury from frost or wet, another sowing may be made when the weather is more favorable. Because we recommend April, it is not to be understood the sowing must be made at that time. The only object is to obtain a vigorous growth and early bloom. If sown in any part of May, they will flower later, but abundantly throughout the latter part of summer.

Mode of Sowing.—This must be varied according to the style of the garden and the variety to be sown. Many of the most showy and beautiful annuals are very impatient of removal; and these must be sown where they are to remain and flower. Such are the Lupins, Sweet Pea, Eschscholtizia, Poppies, &c. Indeed, most of the tap-rooted annuals will not bear transplanting. Other annuals, which may be transplanted, and some of which flower stronger for removal, may either be sown in the places where they are to bloom, or in prepared beds, from whence they are to be transplanted to the flower-garden. In small gardens, undoubt-edly the best way is to sow where they are to remain, thinning out the superfluous plants. This gives the least trouble; but in larger gardens, or where there are beds of early spring bulbs to be filled, the safest and best plan is to sow in well-prepared beds, and, when the

young plants are of proper size, to transplant to the flower-garden.

Never sow seeds when the ground is very wet, particularly early in the spring. Select a me when the soil is neither wet nor dry. The sowing must be left to the taste of the time when the soil is neither wet nor dry. The sowing must be left to the taste of the cultivator, and the extent of surface. If there are vacant beds, the seeds may be sown in rows across the bed; but if in the border, where there are only limited spaces among the perennials or bulbs, they may be planted in masses or groups, in which mode we think annuals produce the greatest effect. Our plan has always been to mark out a circle a foot or more in diameter, and level the ground evenly and nicely with the rake; then, with the back of a trowel, press the surface firmly down; around the circle make a slight drill of the proper depth, in which the seeds are thinly sown, covering them lightly, and again pressing the earth upon the seeds with the back of the trowel. If the soil should happen to be too wet, or stiff and adhesive, fill the drill with some light sandy loam, and make firm, as before ordered.

And here we should remark that great care should be exercised in covering the seeds. It is the great error to cover too deep; and the cause of more than half of the complaints against seedmen of selling old and worthless seeds comes from inexperience or want of judgment in sowing. No rule can be given in this respect; but, as a general guide, all large seeds, such as Sweet Peas, Lupius, &c., may be sown half an inch deep,—smaller, less; and for the smallest, such as Clarkia, Pinks, &c., a covering of one-sixteenth of an inch suffices. If sown too deep, they are longer in germinating, and are liable to decay. Avoid the general error of sowing the seeds too thick; as it causes an elongated and feeble growth, which no

subsequent thinning will entirely remedy.

If the weather should be warm, or the soil very dry, it will be advisable to give a slight watering with a watering-pot with a fine rose. It is not often that seeds planted in April need watering; but later in the season they frequently require it. Use water of the same temperature of the soil; or, if warmer, it will do no harm. The waterings should be given early in the afternoon, and repeated every few days; as, when the seeds begin to swell, they are more susceptible of injury from drought, and the young plants often perish when it is neglected. A good plan with very small seeds is to cover them with an inverted flower-pot, being careful to remove it before the young seedlings appear above the surface, otherwise they will be drawn up weakly, and are likely to be injured by the hot sun or a cool night. Seeds vary in their period of germination. Some will be above ground in a week, while others require two or three weeks.

As soon as the seedlings have made three or four leaves, and are an inch high, they should be thinned out. If they are kinds which will bear removal, they may be replanted in vacant spaces in the border. No rule can be given for thinning. Tall growing plants with spreading branches will require more room than slender-growing dwarf kinds; and in this the cultivator must be guided by the Catalogue. Stir the soil around the plants from time to time; and, if they appear crowded, a second thinning will be of great benefit to those that remain. If the growth is not strong, from the nature of the soil, apply occasionally a very

small amount of guano or bone-dust.

Transplanting.—Presuming that many cultivators will sow their seeds in prepared beds, whence the plants are to be removed to the borders to bloom, it is necessary that the work should be carefully performed to insure success. Transplanting should, if possible, always be done in cloudy weather, and towards evening. If the soil is dry, the plants will require a light watering to settle the earth around the roots; and, if warm sunny days succeed the operation, they will root all the better to have a little shade for a day or two, which may be done by spreading an old newspaper over them, or covering with a mat, removing either at night. All large-growing plants should be transplanted singly; but many of the smaller may be removed in patches, without any trouble, if the soil is previously well watered. We have found very little difficulty in moving Zinnias, Asters, and smaller plants, after they have begun to bloom. After the plants are established, they will need no other care than to \*\*e\* up the taller-growing sorts to stakes to prevent the wind and rains from beating them down to the ground, and injuring their blossoms.

#### HALF-HARDY ANNUALS.

We have already remarked that half-hardy annuals are those that require the aid of artificial heat to assist germination; but it should be remarked that this is not absolutely necessary if the sowing is deferred until the ground is warm,—say the last of May. This is exemplified in the Portulaca, which sows itself: but the plants never appear above ground till June; and those who do not wish the trouble of sowing seed early should plant in open ground in May. But, to gain time, and insure an early and abundant bloom, it is best to plant early, and assist the growth by a gentle artificial heat. Some of the most magnificent annuals are embraced in this class, of which the Aster, Zinnia, and Balsam are examples. The cheapest, most convenient, and simplest mode of doing this is the ordinary hotbed of stable manure, which gives a gentle bottom-heat quite sufficient for any of this class. Its construction is simple, and generally understood by most owners of a garden; but, as there may be some of our readers who do not know how to make a good hotbed, we add the details at the close of our remarks, observing, however, that it is so valuable an aid in the forwarding of flowers as well as vegetables, that no one having a garden can well dispense with it.

Presuming that the bed is made and all ready for use, the seeds may be sown on the prepared soil, just the same as in the open ground, and afterwards transplanted to the borders; but, as this is often attended with many failures in inexperienced hands, it is the safest to sow the seeds in pots or pans; if in neither of these, in shallow boxes. The pots should be about four or five inches in diameter, and should be perfectly clean. The soil should consist of a uniform compost of light, sandy loam, enriched with some fine leaf-mould, avoiding any raw or crude manures, which are certain to injure the young plants. Put in a few crocks at the bottom of each pot, for drainage, and fill to the brim with the compost, giving the pot one or two gentle knocks on the bottom to settle the earth, which should be within half an inch of the rim. Level the surface by gently pressing it with the bottom of a pot, or a circular piece of wood made for the purpose, as this will not only be beneficial to the seeds, but assist in distributing them more evenly and regularly over the soil. Observe the same rules, in regard to covering, that we have already named. Some kinds will

need nothing more than a thin sprinkling of earth just to fairly cover the seeds; and each pot should have the surface again gently pressed down; a slight watering with a very fine rose will complete the operation of sowing.

When all the pots are filled and planted, and marked, as they should be, with the name of each, and date of sowing, upon a neat label, remove them at once to the hotbed or frame, and place them perfectly level, so that each pot may receive its proper proportion of water evenly over the surface. If there are but a few pots, and a greenhouse is at hand, the proper have a place on a surreceive the surface the surface. evenly over the surface. If there are but a few pots, and a greenhouse is at hand, they may have a place on a sunny shelf, near the glass, shading them during the middle of the day. Shading will also be necessary in the hotbed. The temperature should not exceed 75° or 80°, or the seeds will germinate too quick, and be drawn up weakly. As the seedlings appear above ground, give air by tilting the sashes at the back. Give water as the pots require it (which is usually once a day), and always of the same temperature of the bed, and be careful in the operation not to wash away or destroy the young and slender seedlings. During cold nights, a mat may be thrown over the frame, which will prevent the loss of heat, and maintain a more even temperature. As some of the seeds will make their appearance before others, those that appear above ground should be placed together towards the back of the frame, where they can have a greater abundance of air, and be more freely watered, than the others. As the plants acquire a proper size, they should be thinned out, so as not to injure those that remain; and then, when further advanced, should be transplanted into four-inch pots,—one, three, or five plants in each, according to the variety,—using a compost similar to that in which they were sown, replacing the pots in the bed, and shading slightly till they are well established, and able to bear the full sun. Those that are later in vegetating should be treated in the same manner, until all are transplanted, unless it is such kinds as will not bear removal safely; and must be allowed to remain in the pot in which they were sown, thinning them out, so that not more than three or five plants are left. The Cypress-vine, Thunbergia, &c., are of this character.

By the middle of May, the seedlings will be ready for transferring to the beds or borders where they are to bloom; but, before this is done, the plants should be "hardened off," as it is termed, in order to prepare them for the change. This is effected by gradually giving the plants more air, and, when the weather is favorable, both day and night, removing the sashes wholly during the day; or, if more convenient, removing them to a cold frame, where they can be fully exposed in the daytime, and protected at night, if cold, with a covering of mats. Much must be left to the judgment of the cultivator and the amount of available space, the object being to prevent the plants from being injured by a too sudden exposure to the open air. Proceed, in transplanting, as we have already recommended under that

head for hardy annuals.

#### TENDER ANNUALS.

We have stated that the classification of hardy, half-hardy, and tender annuals was a convenient one; but, really, there is scarcely an annual but will grow freely in our climate in the open ground in summer. The term tender has been applied by English gardeners because the plants do not attain full perfection unless grown in pots in the greenhouse. Such are the Globe Amaranth, Balsam, Egg-plant, &c. All the tender annuals, therefore, may be treated in the same manner as the half-hardy, and with equal success.

#### BIENNIALS AND PERENNIALS.

Biennial and perennial plants are almost indispensable additions to the flower-garden, displaying their blossoms both early and late, succeeding and even flowering with the spring bulbs, and continuing long after the frost has destroyed the hardiest annuals. They are also so easily cultivated, and require so little care for their great amount of beauty, that they must be ranked as the most permanent and showy objects of the flower-border. We only need name the Larkspur, Phlox, Lychnis, Coreopsis, Saxifrage, &c., as a few among the many imposing and elegant groups.

Biennials are those plants that generally do not flower until the second year, and, after blooming, die. These include, however, many splendid species, such as the Foxglove, Canterbury Bells, Sweet Williams, Hollyhocks, &c. Perennials are plants which generally do not bloom until the second year, but continue to bloom for years in succession, and may be propagated, after once obtained, by division of the roots, growing more vigorously and flowering better if divided and replanted every three or four years.

The proper time for sowing the seeds of hardy kinds is in April or May, at the period of sowing the hardy annuals, in order to obtain a good strong growth the first year, and a greater abundance of flowers the second; but the sowings may be continued with success as late as August, after which the plants will not become strong enough to flower the following year. Whether the seeds are sown in beds or in the border, the young plants should be thinned out, and afterwards transplanted, just as we have directed for hardy annuals, only giving them more room, and encouraging a vigorous growth by hoeing, watering, &c. On the approach of severe frosty weather, protect the plants with a light

covering of leaves or coarse manure, and the succeeding year they will blossom in great profusion.

#### SPECIAL DIRECTIONS TO AMATEUR CULTIVATORS.

In addition to the preceding remarks, which are given as the results of our own practice for many years, and which, we think, are adequate for all general purposes, the following special directions are added for the guidance of amateurs in the treatment of many of the more choice and new flowers enumerated in our Catalogue. If carefully followed, it is hoped they will remove all causes of failure in the attempt to cultivate many of the most beautiful plants.

Zinnias may be treated precisely like the Aster. The double varieties, in eight distinct colors, are superb ornaments of the garden.

Epacrises, Heaths, Azaleas, and Rhododendrons should be planted in boxes or pans, well drained, and filled with light, very sandy loam, with a small quantity of peat. Make the earth firm, and give a thorough watering before sowing. Cover the surface with a little sand, upon which the seed should be thinly scattered, covering with the least possible quantity of fine sand. Place the pans or boxes in the greenhouse, where they can be wholly shaded from the mid-day sun, and lightly damp the surface when dry. The young plants will make their appearance in three or four weeks; and, when strong enough to handle easily, transplant into boxes an inch or two apart, and gradually harden them off, so as to remove to frames or the open air.

Calceolarias, Cinerarias, and Chinese Primrose require similar treatment. The seeds of the former are so minute, that they are liable to be destroyed by covering; and complaints are frequent of the failure to make the seed grow. If the following directions

are carefully observed, an abundance of plants may be easily raised: -

The seed should be sown in pots prepared in the following manner: The pot to be half filled with drainage; over that, rough siftings of the mould, and the surface covered with soil as fine as possible, half of which should be composed of silver sand. When prepared thus, it should be watered with a fine rose, immediately after which sow the seed carefully, without any covering of soil. The pots should then be placed under a close frame or hand-glass, in a shady part of the garden (no artificial heat being required). In large establishments, of course, they may have propagating or other houses that will do, where the same kind of moist temperature could be obtained; but any exposure to the sun must be carefully guarded against by mats or paper. If the situation is of the proper temperature, they will require watering but very seldom. Directly the seedings are strong enough, they must be pricked off in pots prepared as before, and placed in the same situation. From the store-pots they will require to be potted off singly; after this they will grow very rapidly. Through the winter the plants will thrive well on the shelves near the glass, in the greenhouses; and to obtain fine specimens, they must be shifted freely till the flower-stalks have started, and should always be smoked with tobacco directly the greenfly appears, as no plants in cultivation so readily suffer from this insect as the Calceolaria.

It is necessary to remark, that one of the most frequent causes of the appearance of these injurious insects is the plant becoming root-bound; to avoid which evil, it is important that

it should frequently be repotted during the growing season.

Acacias of all kinds should have scalding water poured over the seeds, and be allowed to soak for twelve or twenty-four hours: they should then be planted in pots, in light, rich, sandy soil, covering one-fourth of an inch deep, and placed in the hotbed or greenhouse.

Globe Amaranth, Linum, and Cypress-Vine seeds should be soaked in tepid water for twelve hours, to insure a quick germination. Rub the seeds with a little dry sand when ready for sowing.

**Liliums** of all kinds should have their seed planted immediately they are gathered, if possible, as they vegetate sooner. They remain good, however, for three or four years; but, when sown in spring, do not often vegetate until the second year.

Cyclamens should be sown in the greenhouse or hotbed, in pans of light rich soil, well drained. Transplant singly into pots, and keep them constantly growing the first year.

Stocks of the winter-flowering varieties should be sown in July, and pricked off singly into small pots, shifting them as they require it, and keeping them in cold frames as long as it can be safely done.

Canna-Seeds have a hard, horny covering, and require to have the seed soaked in warm water for ten or twelve hours, planting them in hotbed while the heat is brisk and strong. Transfer to the open ground June 1st, and take up the roots before hard frosts.

Gloxinias and Archimenes require to be grown in pots in the greenhouse, or a warm frame. The soil should be light and rich, — leaf-mould, loam, and sand.

Ferns are easily raised from the spores (or seeds) with a little care. Sow in pots, which should be half filled with a good drainage of crocks, and the remainder, to within an inch of the rim, with coarse sandy peat, or leaf-mould; make the surface smooth, and cover with a thin layer of sand; on this sprinkle the spores. Set the pot in a pan of water, in a warm, shady part of the greenhouse, and cover with a pane of glass. In a month or two, the plants will be ready to pot off singly in small pots.

#### CONSTRUCTION AND MANAGEMENT OF HOTBEDS.

We have already alluded to the importance of a hotbed for the successful growth of many of the half-hardy annuals and more delicate greenhouse plants. Though most or all kinds of seeds may be raised in a frame without bottom-heat, yet this can only be done so late in the season, when the weather has become warm, that many of the annuals are late in blooming, and the greenhouse plants do not ripen and mature their wood, and are therefore ill adapted to winter well. It is to obviate this that the hotbed is recommended to all ama-It is so easily made, and at such slight expense, that it will well repay all who would secure an abundance of flowers early in the season. (See illustration, page 4.)

Situation of the Bed. — This should be in a warm position, fully exposed to the sun, facing the east or south, and sheltered by a fence or hedge on the west or north. The soil should, if possible, be light and dry, as in this case the bed can be sunk a foot or more in the ground; but, if damp or cold, it should be built upon the surface.

Making the Bed. — Manure fresh from the stable is best. This should be thrown over and thoroughly shaken up with the fork, making it into a conical heap. In this state it should be allowed to remain four or five days, at the end of which time it should be turned over, shaking it up as before. At the end of another three or four days, it will be ready to make up the bed. Lay out the ground six inches larger than the frame, and put down a stake at each corner. The frame may be of any size; but the most convenient is nine by three feet, which will take three lights, three by six feet, the ordinary size, which can always be had ready made. Proceed to build up the bed to the height of two and a half or three feet, making it rather firm, and watering, if the manure is dry. When the bed is finished, put on the lights, and let it stand to settle and exhaust the violent heat. In a day or two add three or four inches of light sandy loam, spreading it evenly over the bed. If the seeds are to be sown in the soil of the bed, two or three more inches should be added; but, if in pots, no addition will be necessary.

The pots being ready, and sown with the various seeds, should be put into the frame, shading them during the day, and regulating the temperature by tilting the lights at the back, both night and day, and covering at night with mats. Plunge the pots in the soil, and, with proper care, the seeds will soon be above the soil. A thermometer placed in the bed will be the safest guide to the inexperienced. It should not rise above 85° in the day, nor sink below 60° at night. As the heat declines, linings of fresh manure should be applied around the outside of the bed; but, ordinarily, for seeds this is not necessary.

The length or number of the frames is immaterial; but they should be nine to twelve inches deep at the front, and fifteen to eighteen inches at the lack. This will give a good

inches deep at the front, and fifteen to eighteen inches at the back. This will give a good slope to carry off the rain. Cold frames are simply the hotbed-frame set upon a warm spot of ground, covering it at night to keep in the warmth accumulated during the day.

Commendations.—To attempt the publication of the numerous commendatory letters would fill several pages of our Catalogue. Gratifying as this would be to us, we are comtory manner in which their orders have been executed, and the pleasure derived from the cultivation of our seeds. pelled to omit even the briefest extracts from the hundreds of letters expressing the satisfac-

WASHBURN & CO., Horticultural Hall, Boston, Mass.

#### THE FLOWER-GARDEN.

HE arrangement of a flower-garden must depend so much upon the taste or fancy of the cultivator, that it is very difficult to lay down any rules applicable to general use. All we can do to aid the inexperienced is to give such plans as display correct principles in their general features, which will serve as a guide in grounds of smaller or larger extent. Of course, we have reference to flower-gardens, or spots of ground set apart for annuals, bedding-plants, or bulbs; as any thing more extensive would be beyond the scope of a catalogue.

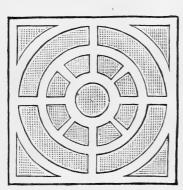

Where the flower-garden already exists, and is laid out in beds or borders for miscellaneous plants, all the information necessary to the

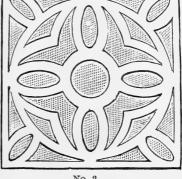

amateur will be found in our preceding remarks, except that, perhaps, in reference to the disposition of colors. If, however, the form is not a fanciful one, or one laid out in the true principles of the geometrical style, it may be remodelled upon some plan which will combine the merits of those we now annex.

Commencing with the simplest form of ground, where there is no pretension to artistic display, the two following will be found well adapted for annuals or bedding-plants, or the

two combined.

In the first plan (No. 1), the ground may be arranged as follows: In the centre may be In the first plan (No. 1), the greund may be arranged as follows: In the centre may be double Zinnias, if a grand display is desired; but if not, then Zinnias, Marigolds, Asters, and similar tall-growing annuals, placing the tallest in the centre. The eight small beds adjoining the centre one may be planted in alternate colors, or mixed with Clintonia, Portulaca, Verbenas, Pansies, Agrostemma, Lobelias, &c. The four larger beds may be planted in four different colors, or mixed, or in ribbon style; in the latter case, using Perilla Nankinensis for the centre row, and other decided colors for the outer rows, which should be dwarf at the edge. The four corner-beds may be filled with Mignonette, Sweet Alyssum for the fragrance, or with other more showy plants.

No. 1.

No. 2.

The second plan (No. 2) admits of a greater display, and particularly if masses of one color are desired. The centre may be filled with any tall plants of one color; viz., Zinnias, Asters, Marigolds, or Balsams. Two of the four oval beds may be Portulaca, scarlet and white, or golden and scarlet; the other two with blue and white Lobelia, or crimson and white Candytuft. Two of the four large beds between the oval ones may be planted with 30

Tropæolums in two colors, and the other two with crimson and variegated Petunias. The Fropeoitins in two colors, and the other two with crimson and variegated retunts. In a four small beds may be planted with Abronia Umbellata, Nolana, Phlox Drummondii, and Linum Grandiifora. The four oval corner-beds may be planted with ornamental-foliaged plants, Perilla in two, and Coleus Verschaffeltii in the other two. Four of the small corner-beds may be filled with Mignonette and Alyssum, and four with Dianthus Heddewégii. These may be varied to suit the fancy of the possessor with the newest annuals described in the Catalogue, selecting them according to colors and neighbors, should be edged with box or thrift. The extent of ground is thirty-two feet square.

For more artistic and complete grounds,

we add plans from one of the most elegant flower-gardens of England.

The first plan (No. 3) is extensive and elaborate in design, and evinces artistic skill and arrangement of a high order. The length of the garden is a hundred and sixty feet, and the width seventy-two feet. The walks are of gravel, and the beds are all edged with box. It may be filled with bedding-plants or with annuals; and, supposing the amateur to desire a mixture of the two, the following is an appropriate list; Scarlet Geraniums and Verbenas being the most effective of bedding-plants: -

- 1. Verbena (blue).
- Verbena (white). 3. Pansies, of the fine showy sorts.
- 4. Portulaca (white).
- Tom-Thumb Geranium.
- 6. Verbena (striped).
- Portulaca (golden).
   Campanula Carpatica, with Tree-Rose
- in the centre.
- 9. The same. 10. Tom-Thumb Geranium.
- 11. Portulaca (white).
- 12. Verbena (striped). 13. Portulaca (golden).
- 14. Pansies, of the fine showy sorts.
- 15. Verbena (white).
- 16. Verbena (blue).
- 17. Ageratum.
- 18. Heliotrope.
- 19. Tom-Thumb Geranium. 20. Verbena, Sunset (rose).
- 21. Portulaca (golden).
- 22. Portulaca (scarlet).
- 23. Same as No. 8.
- 24. Geranium, Lucia Rosea (pink).
- 25. Tom-Thumb Geranium.
- 26. Tom-Thumb Geranium.
- 27. Geranium, Lucia Rosea (pink).
- 28. Portulaca (scarlet).
- 29. Tom-Thumb Geranium.
- 80 Heliotrope.
- 31. Verbena, Sunset.
- 82. Portulaca (golden).
- 33. Ageratum.

34. Same as No. 8.
35. Vase, or Statue. If a vase, to be filled with Verbenas, Petunias, &c. If a statue, to be surrounded with a circle of Oxalis Floribunda.

But, when it is intended to be filled with annuals, this may easily be done by substituting Candytuft, Alyssum, Eschscholtzia, Lobelia, Agrostemma, Petunias, Dwarf Convolvulus, Clarkias, &c.

### COLLECTIONS OF FLOWER-SEEDS, BY MAIL, FREE OF POSTAGE.

In order to more extensively disseminate our choice varieties of Flower-seeds throughout the country, giving those who reside at a distance the same facilities for procuring them as those who have the opportunity to make personal application, we put up select assortments expressly for sending by mail, giving particular attention to this department of our trade. The low rate of postage enables us to supply distant customers with all the choicest seeds upon the same terms as those who are near the market. Orders may be forwarded to us with the understanding that the seeds we furnish are of the very best quality, and the selection such as will gratify every purchaser. Our collections are made up with great care, and all the varieties, unless those entirely new, are such as we have seen and cultivated ourselves, and can confidently recommend; many of the superb double varieties being such as have been raised from the fine flowers, specimens of which have obtained the highest prizes of the Massachusetts Horticultural Society.

prize of the printer and society.
No. 1 contains twenty-four varieties of choice and beautiful Annuals \$1.00
No. 2 contains twenty-four varieties of the finest hardy Biennials and Perennials . 1.00
No. 3 contains ten varieties of extra fine Annuals and Perennials, including the beau-
tiful French Asters, Double Camellia Balsams, Double German Stocks, and
other choice flowers

Pansies, Carnations, new Verbenas, new Double Zinnias, &c 1.00
No. 5 contains one hundred varieties of Annuals, Biennials, and Perennials, including
new and choice varieties
No. 6 contains fifty varieties of Annuals, Biennials, and Perennials 2.50
No. 7 contains twenty varieties of hardy Annuals, Biennials, and Perennials, for
autumn sowing, in August and September
No. 8 contains fifteen different and choice kinds of greenhouse-plant seeds 3.00
The said in these constraints are all of any constants. Development 11

The seeds in these assortments are all of our own selection. Purchasers who would rather make a selection from the Catalogue can do so, and a proportionate discount will be made.

#### FORMATION OF CLUBS.

The extensive distribution of our seeds is an especial object. Our Catalogue has been prepared with much labor; and it has been our constant aim to make it a complete and safe guide to the cultivator; both in the selection of varieties and their growth. As an additional inducement to individuals who desire to possess a large collection, or for the formation of clubs for the same object, we offer to send by mail, free of postage, to any address in the United States, on receipt of the amount of the order, seeds selected as follows:—

Purchasers	remitting	\$1.00	may	select	seeds a	at	Catalogue prices,	amounting	to \$1.15
44	66	2.00	- 64	61		66	- 46-	"	2.35
44	66	3.00	66			6	66	46	3.65

44	66	30.00	66	61		66	46	"	41.50

Persons desiring us to make their selections may rely upon our sending only those which are really showy and handsome, and easy to cultivate. We believe that our experience will enable us to make selections that cannot fail to give entire satisfaction to any lady or gentleman who may send us their orders.

In sending orders for seeds by mail, it will be only necessary to give the date of the Catalogue from which the selection is made, and the numbers, instead of the names, of the varieties. The name of the person to whom they are to be sent, and the names of the Town and State, should be so plainly written, that there may be no mistaking a single letter. We often receive letters containing money, the signatures of which are so indistinct as to make it almost impossible to decide where and to whom the seeds are ordered to be sent.

The above prices apply only to flower and garden seeds in packets; for prices by ounce and pound, see vegetable-seed department, in this Catalogue. Prices to dealers on application.

Address,

WASHBURN & CO., BOSTON, MASS.

## AMATEUR CULTIVATOR'S GUIDE

#### TO THE FLOWER-GARDEN.

#### ANNUALS.

To aid in making the selection of seeds, the botanical name is given, and the popular name when there is such, together with the natural order to which it belongs, as indicative of the general character of the flower. These, with the full remarks, will enable the amateur to make a judicious selection.

Wishing to make this book as simple as possible, we have divided the flower-seeds into classes, viz.: Annuals, Biennials, Perennials, Greenhouse, Summer Climbers, Everlast-

ings, and Ornamental Grasses.

In giving orders for seeds, it is preferable to mention the numbers; but, as the numbers are often changed, it is absolutely necessary to give the date of the Catalogue.

ABRONIA UMBELLATA.

#### ABRONIA. NAT. ORD., Nyctaginiaceæ.

A charming plant, with Verbena-like heads of sweet-scented flowers. Very effective in beds, rockwork, or in baskets suspended in a conservatory; growing freely in any light, rich soll, and flowering from August to October.

PRICE.

	growth, with medium-sized flowers of the most perfect form, very double, and densely imbricated. Six colors mixed	.10
42	Porcupine, or Hedgehog. The flowers are composed of long, quilled, curious-looking petals: hence the name. Mixed	.10
43	- Ranunculus-flowered. A small flowered variety, very double, imbricated,	
44	surrounded by a range of green leaves; valuable for bouquets. Finest mixed	.10
••	fuse bloomers. The flowers are as large as Pæony Asters, beautifully im- bricated, of oval form, and very double. In habit, height of plant, and form of flower, intermediate between the tall Chrysanthemum and Pæony Perfec-	
45	tion Asters; a lavorite class. Ten colors. Mixed	.25
40	— Reid's Improved. An improved variety taller than the preceding, and the finest of the quil'ed varieties	.10
46		
	ror, but superior to that in habit of plant and form of flower. The plant is very robust, bearing itself without assistance of a stick, forming a hand-	
	somely-branched, compact bush, crowned with from ten to twenty large and	
	smaller flowers, half of them of the size of the largest Giant Emperor Asters, which are of a beautiful globular form, regularly imbricated. Mixed colors	.25
47	- Schiller. This variety, of new form, is splendid in its formation; each indi-	
	vidual plant will make a show for itself; pyramidal; the leaves round, the stock regular and ornamental, the flowers splendid, double, and well set. 1½ feet in height. Mixed colors	.25
48	- Giant Pæony Perfection. This new and fine variety was produced from	
	the New Giant Emperor and Pæony Perfection. The flowers not only reach, but surpass, the enormous dimensions of the Giant Emperor Aster. They	
	are, however dissimilar to the preceding; flowers perfectly double. Mixed	.25
	AUBERGINE (Egg Plant). Nat. Ord., Solanaceæ.	
	The varieties enumerated are the eatable fruited kinds so extensively grown about our cities. The white and scarlet are sometimes grown in pots, and are very interesting, being covered in autumn with beautiful egg-shaped fruit. The scarlet variety is a great novelty. They succeed in a warm southern location. Half-hardy annuals.	
49	Aubergine, White-fruited. From France. 1½ feet	.05
50	— Purple-fruited. Large; from France. 1½ feet	.10
	Scarlet-fruited. Very striking and handsome; from France. 1½ feet .	.10
52		.10
	BALSAM. NAT. ORD., Balsaminacea.	
	Magnificent conservatory or out-door plants, producing their gorgeous masses of beautiful brilliant-colored flowers in the greatest profusion; when grown in pots, and large specimens are desired, they should be shifted into ten or twelve inch pots, using the richest and freest compost at command, and liberally supplied with manure-water; for out-door decoration, the soil should be of the richest possible	
53	character. Tender annuals.  Balsams, Camellia-flowered, or Blotched. A beautiful collection of mixed	
	colors; very double. 2 feet	.10
54	Improved Rose-flowered. A finely imbricated variety; flowers two inches in diameter; superb; twelve colors, mixed. 2 feet	.25
55	— Rose-spotted. Six varieties, mixed. 2 feet	.10

NO. HELIOPHILA. NAT. ORD., Cruciferæ.	PRI	CE.
Very useful, pretty little plants for small beds or edgings, flowering very prefusely, and remaining a long time in beauty. Half-hardy annuals.	.°O-	
		10
167 Heliophila. Mixed; a good variety of colors	•	.10
HELIANTHUS (SUNFLOWER). NAT. ORD., Composite.	41.	
A splendid genus of the most showy plants, remarkable for their stately grow and the brilliancy and size of their noble flowers. Hardy annuals.	ш,	
168 Helianthus Arggrophyllus. Yellow foliage; silky white. From S. Amer. 1	ft.	.10
169 — — Striatiflorus, Fl. Pl. Flowers double; yellow, striped with chocola brown; fine; compact in their growth, with beautiful silvery foliage	-91	.10
170 — Californicus, Fl. Pl. Very large and double; from California. 5 feet		.10
<ul> <li>171 — Green-centred. Yellow; double, with conspicuous green centre. 4 fee</li> <li>172 — Macrophyllus Giganteus (Giant Sunflower). A very large-growing v</li> </ul>		.10
riety, with only one flower; from Africa. 10 feet		10
HIBISCUS. NAT. ORD., Malvaceæ.		
One of the most ornamental, beautiful, and showy tribes of plants cultivate	ed.	
Whether the hardy sorts be planted in mixed or shrubbery border, or the motender varieties be grown for in-doors decoration, they are all alike characterized.	ed	
by the size and varied beautiful colors of their flowers.	Δ	٥٤
173 Hibiseus Africanus. Cream-color; rich-brown centre. Hardy annual. 112	160	.05
ICE-PLANT. NAT. ORD., Ficidiaceæ.  A most singular, trailing plant, with thick fleshy leaves that have the appe	0.24	
ance of being covered with crystals of ice; very ornamental for rock-work,	or	
mixing with other plants in conservatory or flower-garden.  174 Ice-Plant. From Greece. Half-hardy annual		.05
	٠	.00
IMPATIENS. Nat. Ord., Balsaminaceæ.  Handsome, showy border-plant; succeeds in light, rich soil. Half-hardy annu	al.	
175 Impatiens Glanduligera. Yellow and crimson; from East Indies	•	.10
JACOBEA (SENECIO). NAT. ORD., Compositæ.		
A useful and exceedingly showy class of gay-colored profuse-blooming plants,	of	
the easiest culture; remarkably effective in beds or ribbons. Hardy annual.  176 Jacobea. Double. Finest, mixed. 8 colors		:10
177 - New Dwarf Variety. Compact habit; fine for pots or beds. Double. 1	ft.	.25
LARKSPUR (DELPHINUM). NAT. ORD., Ranunculaceæ.		
One of the generally cultivated and ornamental genus of plants, combining un	iu-	
sual richness with an endless variety of colors, all of which are extremely beauti and pleasing. The flowers are produced in the greatest profusion; and the plan		
in beds, masses, or ribbons, are strikingly effective: indeed, few plants are so go erally useful and valuable for their decorative qualities, either in the garden	n- or	
when cut for vases. The great difficulty has hitherto been the procuring of set which would yield double flowers. To this object we have given special attention	eds	
and now offer seed saved only from such varieties as are really to be depend	on, led	
upon, and worthy of a place in every garden. For the guidance of amateurs, may simply notice that the stock-flowered Larkspur is of the same habit as the	we	
Dwarf Rocket, but has longer spikes, and much larger and more double flowe	rs;	
the tall stock-flowered variety is the same style as the branching, but with me compact spikes, and larger and more double flowers. The tall-growing variety	ore ies	
scattered in shrubbery-borders produce a charming effect when backed by grefoliage of the shrubs. Hardy annuals.	en	
178 Larkspur Dwarf Rocket. A fine mixture; saved from a fine collection.		.05
179 — Tall Rocket. Same as preceding, except being taller. 2½ feet		.05
180 — Hyacinth-flowered. Finest mixed	•	.05
lection	•	.05
182 — Tall Stock-flowered. Mixed; very fine	•	.05
183 — Pyramidal. Mixed; a splendid mixture	•	.05
185 — German Branching. A good variety colors		.05

	ICE.
LAVATERA. NAT. ORD., Malvacea.	
Very showy, profuse-blooming, handsome plants; exceedingly effective when used as a background to other plants. Hardy annuals.	
186 Lavatera. Finest mixed	.05
LEPTOSIPHON. NAT. ORD., Polemoniacea.	
A charming tribe of the most beautiful of our hardy annuals. Nearly allied to the Gilia, and requiring the same treatment.	
187 Leptosiphon Androsaceus. Mixed. From California	.10
188 — Hybridus. The finest of them all, embracing all the colors from dark-maroon, orange, crimson, violet, golden-yellow, and white.   † foot	.25
LIMNANTHES. NAT. ORD., Tropæolaceæ.	
Very beautiful, showy, profuse-blooming, dwarf-growing plants; slightly fragrant; particularly effective and valuable as edgings, succeeding in any soil or situation, but delighting most in a moist soil. From California. Hardy annuals.	4.0
189 Limnanthes. Finest mixed	.10
A handsome, free-flowering genus of snapdragon-like plants, remarkable for the beauty and variety of their colors; well adapted for and very effective in beds, or ribbons, rock-work, woodland-walks, &c. Succeeding in any soil. Hardy annual.	.10
190 Linaria Mixed. All the finest sorts	.10
191 Lindheimeria Texana. A very pretty little plant, having a vanilla-like odor.	
Yellow; fine. Hardy annual. 2 feet	.10
LINUM. NAT. ORD., Linaceæ.	
A genus of the most beautiful, free-flowering plants, amongst which stands distinguished for its brilliant-colored flowers, Linum Grandiflorum Coccineum, being one of the handsomest, most effective, and showy bedding-plants we have; for, whilst its habit of growth is slender and delicate, it produces a profusion of beautiful, saucer-shaped flowers, of a rich scarlet-crimson, with crimson-black centre. The whole genus deserves general cultivation. Make nice pot-plants.	
192 Linum Grandiflorum Coccineum. Scarlet, with crimson centre. 1 foot.	.10
193 — Album. Beautiful white variety. 1 foot	.10
195 — Lewisii. Blue and white stripes. From North America. 2 feet	.10
196 — Variegatum. Striped, lilac and white; new. 2 feet	.10
LOBELIA. NAT. ORD., Lobeliaceæ.	
A most elegant and useful genus of dwarf plants, of easy culture; well adapted for bedding, edging, pots, or rockeries. Lobelias, in fact, are employed as universally in the general summer-garden as scarlet geraniums, to beds of which they form a neat and effective edging. Lobelia Speciosa is the finest of all, from its intense dark-blue color, with a clear white spot, and its dark-colored foliage. The varieties of Lobelia Gracilis are the best adapted for rock-work, pots, or suspended baskets, to droop over. The seeds of Lobelias, being very small, cover very slightly when sown. Half-hardy annuals.	
197 Lobelia Compacta. Dark blue, with white centre; compact growth. ½ ft	.1
198 — Grandiflora. Large-flowered variety; dark blue	.1
199 — Marmorata. Marble, blue and white. ½ foot	.1
beautiful intense azure-blue flowers; fine for pots. ½ foot	.1
201 — Paxtoniana. Fine habit, with profuse bloom of pure white, with sky-	
blue belt; the largest flower in the tribe; a beautiful bedding-plant. ½ foot.  202 — Formosa. Beautiful; dark blue. ½ foot	.2
202 — Formosa. Beautiful; dark blue. ½ foot	.10
	•1
A splendid genus of the most ornamental, beautiful, and free-flowering of garden plants, with long, graceful spikes of bloom; colors rich and varied. Many of the varieties are of stately, robust growth, which makes them exceedingly valuaable for mixed flower and shrubbery borders. Hardy annuals.	
204 Lupins, Garden. Mixed colors	.08

No. 205 Lupins Affinis. Blue, white, and purple; pretty. From California. 206 — Alba-coccineus. Rosy-red; apex pure white. Showy 207 — Hybridus Insignis. Purple, white, and yellow. 2 feet	1½ ft.		.05 .25
MALOPE. NAT. ORD., Malvaceæ.  Handsome plants of branching habit, producing their large flower in grands fusion; very effective in mixed borders. Hardy annuals.  208 Malope Grandiflora. Dark crimson. From Barbary. 2 feet	•		.05
209 — Alba. White. From Barbary. 2 feet			
MARIGOLD. Nat. Ord., Composite.  All features considered, it is questionable whether any genus of plants annuals can vie with either the French or African Marigolds in their colors, and their elegantly lobed leaves, of the richest green tint, and, above their almost unequalled and sole adaptation for summer and late autumn de in the flower-garden, retaining their verdant beauty and gorgeous colors, unand undiminished, to the very verge of winter. No feature in their habit of is in excess, either in leaf or flower, but admirably balanced for effect; ne pact, and beautiful; of the easiest culture. Half-hardy annuals.	glowiń ve all, i coratio dimme f growi	in on ed th	
210 Marigold African (Tagetes erecta). Lemon-color. 2 feet			.05
211 — — Orange-color. 2 feet			.05
212 — French (T. patula). New, orange. 1 foot			.10
213 — Superb Striped. 1 foot			.10

215 — Garden Superb. Large double orange flowers; very double .			
<b>216</b> — Cape (Calendula Pluvialis). Purple and white. $1\frac{1}{4}$ feet			.05
MARVEL OF PERU. NAT. ORD., Nyetaginiaceæ.  217 Marvel of Peru. Splendid varieties mixed, including all the finest sor picturesque and diversified colors, finely contrasted with its dar glossy foliage, and densely-branching habit; blooming through summer and autumn months. 2 feet	k-gree lout th	n, ne	.05
MALVA, OR MALLOWS. NAT. ORD., Malvacea.			
Showy, free-flowering plants; succeeding in any garden-soil. Hardy an 218 Malva Capensis. Mixed colors			.05

MACHERANTHERA TANACETIFOLIA (one-fifth natural size).

MACHÆRANTHERA. NAT. ORD., Compositæ.

A pretty little dwarf free-flowering plant; flowers resembling Michaelmas Daisy.
Hardy annual.

219 Machæranthera Tanacetifolia. Blush-purple, with golden-yellow centre. 1ft. .25

	RICE
Handsome tropical annuals, remarkable for the size of their flower compared with their leaves; requires a light rich soil, and a warm situation. The young fruit, or seed-pods, are considered fine for pickling. Tender annual.  220 Martynia Fragrans (sweet-scented). Purple. From Mexico. 2 feet	.05
MESEMBRYANTHEMUM. NAT. ORD., Ficoideæ.	
A brilliant and profuse-flowering tribe of extremely pretty dwarf-growing plants; strikingly effective in beds, edging, rock-work, rustic baskets or vases, in warm, sunny situations; also for in-door decoration if grown in pots, boxes, or pans. Succeeds best in dry loamy soil. Half-hardy annual.  222 Mesembryanthemum. Finest mixed	.10
MIMOSA (SENSITIVE PLANT). NAT. ORD., Leguminosæ.	
223 Mimosa Pudica. Grown as a curiosity, being so sensitive that the leaves close up by being slightly touched. Suitable for pots or open border. 1 ft	30.
MIGNONETTE. NAT. ORD., Reseducea.	
A well-known fragrant favorite, which produces a pleasing contrast to the more showy occupants of the parterre. If thinned out immediately the plants are large enough, they will grow stronger, and produce larger spikes. Hardy annuals.  224 Mignonette (Reseda Odorata). Well-known sweet-scented. ½ ft. (25 per oz.).  225 — Grandiflora. Large-flowered variety. From Barbary. ½ foot	.08
226 — Arborea (Tree). Fine foliage. 2 feet	.10
MOURNING BRIDE. (See Scabious.)	
NASTURTIUM (TROP.ÆOLUM MAJUS). NAT. ORD., Tropæolaceæ.  This is a well-known ornamental annual, of easy cultivation. It flowers best in a light soil. It looks well, trained to a trellis or over a wall. The flowers are rich orange, shaded with crimson and various colors. The variety with crimson or blood-colored flowers makes a fine contrast with orange. The seeds are used as a substitute for capers, and the flowers eaten as salads. Half-hardy annuals.  227 Nasturtium Carneum. Flesh-color. 10 feet	.08
228 — Majus. Bright-orange. 10 feet	.08
229 — Atrosanguineum. Dark-crimson. 10 feet	.08
230 Shillingii. Snotted vellow with dark snots on each notal 10 feet	.10
231 — Scheuermanni. Straw-color, striped with brown; fine	.05
(The above are all tall varieties.)	
NASTURTIUM (TROPÆOLUM MINOR). NAT. ORD., Tropæolaceæ.	
The dwarf improved varieties of the Nasturtium are among the most useful and beautiful of garden favorites for bedding, massing, or ribboning, and rank with the Geranium, Verbena, and Calceolaria. Their close compact growth, rich-colored flowers, and the freedom with which they bloom, all combine to place them in the category of first-class bedding-plants. The Tom-Thumb varieties are distinguished favorites. Half-hardy annuals.	
232 Nasturtium Dwarf Crimson. Very fine for groups. 1 foot	.05
233 — — Scarlet. Brilliant. 1 foot	.05
235 - Tom Thumb, Scarlet, Dwarf and compact: as rich in color and as	•06
effective as the Tom-Thumb Geraniums; fine for nots or vases. 1 foot.	.10
236 — Yellow. Similar to the last, with yellow flowers. 1 foot.	.10
251 — Beauty. Yellow, blotched with crimson; fine. $1\frac{1}{2}$ feet	.10
236 — — Yellow. Similar to the last, with yellow flowers. 1 foot. 237 — Beauty. Yellow, blotched with crimson; fine. 1½ feet. 238 — Crystal-palace Gem. A new sulphur-color, spotted with maroon; a splendid bedding variety. 1 foot.	.10
239 — Pearl. Creamy-white; a fine variety	.10
239 — — Pearl. Creamy-white; a fine variety.  240 — Rose. An entirely new color; habits similar to scarlet Tom-Thumb Nasturtium; color same as Trentham Rose Geranium.	or
	.25
NEMESIA. NAT. ORD., Scrophulariaceæ.  Exceedingly pretty and profuse-blooming plants. Nemesia Compacta and Alba	
should be grown in every garden. Half-hardy annual.  241 Nemesia. Finest mixed	10
	- 4

NICOTIANA ANA CROPETTIA AND ANTON

NO. NICOTIANA (TOBACCO-PLANT). NAT. ORD., Solanaceæ.	CE.
Strong-growing, fine-foliaged plants; effective for large shrubbery borders, and the leaves of some varieties are valuable for fumigating purposes. Tender annuals.  242 Nicotiana. Finest mixed  — Macrophylla Var. Gigantea. Purple-flowered. It grows six to eight feet high; and the plants are crowned with immense bunches or corymbs of large purple flowers. The general habit of the plant, its huge foliage, and stately aspect, give it the advantage over most other ornamental-	.19
NIGELLA (LOVE-IN-A-MIST). NAT. ORD., Ranunculacea.	
A genus of very interesting, compact-growing, free-flowering plants, with curious-looking flowers and seed-pods. From the extraordinary motion manifested by the stamens, this genus has received the above singular names. Hardy annual.  244 Nigella Damascena. Blue; fine. 1½ feet	.05
246 — Hispanica. Blue; very showy. 1½ foot	.05
NEMOPHILA. NAT. ORD., Hydrophyllaceæ.  This is, perhaps, the most charming and generally useful genus of dwarf-growing hardy annuals. All the varieties have a neat, compact, and uniform habit of	.00
growth, with shades and colors the most strikingly beautiful, so that, ribboned, sown in circles, or arranged in any style in which the fancy may suggest, the effect is pleasing and very striking. They are also very useful for pot-culture.	
248 Nemophila Atomaria. White, with blue spots. 1 foot	.05

	Nemophila Discoidalis. Black, with white edge							
	— Insignis. Bright-blue							
252	— Alba. White. 1 foot							.05
253	- Maculata. White; large purple spots. 1 foo	t.						.08
254	- Variegata. White, veined with lilac, and	l blotc	hed v	with v	riolet	; foli	age	
	finely variegated; very effective. 1 foot .							.10
255	Good Mixed.							.08

NEMOPHILA MACULATA.

#### NOLANA. NAT. ORD., Nolanaceæ.

Very pretty trailing-plants, after the character of the Convolvulus Minor; fine for rock-work, hanging-baskets, old stumps, &c. Hardy annuals. .05 .10 259 - Prostrata. Fine blue, streaked with black; from Peru . .05

#### CENOTHERA. NAT. ORD., Onagracea.

A magnificent genus; one of the most useful and beautiful, either for beds, borders, edgings, or rock-work. All the varieties are free-flowering, with superb spikes of large flowers. Half-hardy annuals.

260 Œnothera Acaulis. A large-flowered variety, with silvery-white blossoms	.10
261 — Biennis Hirsutissima. Crimson-orange; from California. 2 feet .	.05
262 — Bistorta Veitchii Grandiflora. Pure yellow; crimson spotted. 1 ft.	.10

263 - Drummondii Nana Nova. Dwarf; bright yellow; from Texas. 1 ft. .10

OXYURA. NAT. ORD., Composite.

264 Oxyura Chrysanthemoides. A showy, free-flowering plant, with beautiful fringed flowers; golden-yellow; from California.

NO.		LCE.
	This new Texas plant is one of the finest of recent acquisitions. It is much	
	Iwarfer and more branching than Palafoxia Texana; and the flowers, which have	
	very much broader florets, are larger, and of a bright rosy-crimson color, with a	
	lark centre. It is an annual, and will flourish finely in light and dry soils, and	
	plooms throughout the summer.	
265	Palafoxia Hookerania. Rosy-crimson, with dark centre	.25
	PEAS. NAT. ORD., Leguminosæ.	
	The Sweet Peas are among the most popular annuals which enrich the flower gar-	
	den. They may be planted and trained on sticks the same as common peas; or	
	they may be sowed along the sides of fences, forming a highly ornamental cover-	
	ing: in any situation, they are always admired. Hardy annuals.

ments; for the Portulacas are unsurpassed for brilliancy and richness of color,	
They are adapted for beds, clumps, edgings, pots, vases, or rock-work. The plants	3
should stand at least eight inches distant from each other. Half-hardy annuals	
293 Portulaca Splendens. Rich crimson; showy. ½ foot	05
294 — Thellusonii. Splendid scarlet. ½ foot	05
295 — Aurea. Yellow. ½ foot	05
296 — Alba. A pure white; fine. 1 foot	05
297 — Thorburnii. Deep orange. ½ foot	05
298 — Caryophylloides. Carnation striped; white and crimson; superb. 1 ft	10
299 — Finest Mixed, above varieties	10
300 - Grandiflora Flore Pleno. Saved from double-flowering plants, repro-	
ducing a large proportion of double, in white, blood-red, purple, &c., re-	
sembling roses; one of the finest new plants introduced for a long time	25

DOUBLE PORTULACA.

POPPY. NAT. ORD., Papaveraceæ.

A tribe of remarkably showy, free-flowering plants, producing a rich and effective display in large mixed borders, in shrubberies, or select plantations; grows

reely in any son. Hardy annuals.		
301 Poppy, Carnation (Papaver somniferum). Finest mixed; double.	2 feet	05
302 — Pæony-flowered. Fine mixed; double		05
303 — Ranunculus. Double mixed		05

#### PRINCE'S FEATHER. NAT. ORD., Amarantaceæ.

Ornamental plants, with elegant plumes of rich-colored flowers; succeeds well in any good garden-soil. Hardy annuals.

304 Prince's Feather (Amaranthus). Large-flowered; crimson. From Nepaul. 2 ft. .05

RICINUS (CASTOR-OIL BEAN). Euphorbiaceæ.

A magnificent and highly ornamental genus. The picturesque foliage and stately growth, combined with brilliant-colored fruit, of the new varieties, impart to select plantations, shrubberies, and mixed-flower borders, quite an Oriental aspect. In the gardens round Paris, they form one of the principal features of

NO. PRI	CE.
attraction; and if planted out and grown as single specimens on our lawns and pleasure-grounds, as an ornamental foliaged plant. Half-hardy annuals.	
305 Ricinus Africanus Hybridus. Rose-colored hybrid; very handsome. 7 feet. 306 — Giganteus. Plant and leaves of enormous size; new. 12 feet.	.25 $.25$
307 — Major (Castor-oil Bean). Very ornamental foliage. 6 to 8 feet	.05
308 — Sanguineus. A very stately-growing plant, with large and highly ornamental foliage of Oriental aspect, with clusters of red fruit. 6 feet.	.10
309 — Sanguineus Tricolor. This effective species has its stems and leaves	***
colored green, brown, and red. 7 feet	.10
311 — Obermannii. Deep red; fine. From Africa. 8 feet.	.10
ROSE, AFRICAN. NAT. ORD., Papaveracew.	
312 — Rose, African, Mixed (Papaver rheas). A beautiful annual, of the easi-	
est culture, producing double, semi-double, and single flowers, all hand- some, sporting in a thousand different varieties of scarlet, crimson, pur- ple, pink, white, variegated, and parti-colored. 1½ feet	.05
RUDBECKIA. NAT. ORD., Compositæ.	
Fine large flowers, with broad streaks of fine yellow, marked with a lively stripe of purple at the base; a prominent disk of deep brown. Very showy.  313 Rudbeckia Amplexicaulis. Hardy annual. $2\frac{1}{4}$ feet	.05
SABBATIA. NAT. ORD., Gentianew.	
314 Sabbatia Campestris. A very pretty tender annual, with rose-colored flowers; yellow eye. From Texas. ½ foot	25
SALPIGLOSSIS. NAT. ORD., Scrophulariaceæ.	
The Salpiglossis are beautiful annuals, with very picturesque and richly colored, erect-lobed, funnel-shaped blossoms; colors beautifully marbled, purple, scarlet, crimson, clear yellow, and buff, with elegant shades of blue. The new dwarf varieties form a very desirable section of this pleasing flower. Half-hardy annual.  315 Salpiglossis. Fine mixed	.10 .25
SALVIA. NAT. ORD., Labiatæ.	
Strikingly ornamental plants for conservatory and out-door decoration, growing freely in any light rich soil, and producing a magnificent effect in beds, ribbons, or edgings, where their beautiful spikes of bloom are produced in the greatest profusion. They all bloom the first season from seed. Half-hardy annual.  317 Salvia Coccinea. Small scarlet flowers, pretty for beds. From S. Amer. 2 ft.	.10
318 — Splendens. A fine scarlet variety. From South America. 2 feet.	.10
319 — Pumila. Dark-red; compact and handsome; fine for bedding. 1½ feet.	.10
320 — Romeriana. Deep crimson; fine. 2 feet	.10
(Other varieties, see Perennials.)	
SAPONARIA. Nat. Ord., Caryophyllaceæ.  One of the best and longest-blooming of all dwarf annuals, producing masses of minute cross-shaped blossoms: admirable for bedding.	
321 Saponaria. Finest mixed	.10
SCABIOUS (MOURNING BRIDE). NAT. ORD., Dipsaceæ.	
A hardy, ornamental plant, suitable for borders. It may be sown at any time in May, and will produce its flowers from July to October. There is a great variety in the flowers of different plants: some of them are almost black, others a dark puce-purple, and various shades, down to lilac. Hardy annuals	
322 Scabiosa Atropurpurea. A mixture of the finest dark colors. 2 feet	.05
323 — New Dwarf. Mixed; very fine. 1 foot	.05
324 — Candidissima. Pure white; very desirable. 1 foot	.05
325 — Starry. Blooms of this, if picked early, well adapted for winter bouquets.  326 — Nana Fl. Pl. Varieties. The flowers, which have all the beautiful varieties of colors of this tribe, are perfectly double, and form round, globular heads; the petals are shorter. Dwarfer and more compact habit	
than the old varieties	.25

NO.	SCHIZANTHUS. NAT. ORD., Scrophulariaceæ.	PRICE.
	Elegant slender-branched annuals, with very conspicuous lobed or cut-petalle	d
	flowers of white, lilac, purple, and rich red, orange, and violet-crimson spots and	d
	marks, very picturesquely blended; well adapted for either garden or pot culture	
	For winter flowering, they should be sown in August. Half-hardy annuals.	
327	Schizanthus Grandiflorus Occulatus. Various shades, with blue centre	10
328	Humilis. Lilac and crimson. 4 foot	05
	Pinnatus. Pinnate-leaved, rosy-purple, and yellow-spotted; pretty. 1 f	t05
330	Priestii. Pure white. 1 foot	05
331	Retusus. Deep rose and orange-crimson tip; fine. 1½ feet	05
332	Alba. White, crimson-tip; superb. 1½ feet	05
333	Good Mixed	05
334	Finest Mixed. Including all best varieties	10
	SILENE, or CATCHFLY. NAT. ORD., Caryophyllaceae.	
	Among the tribe of Silenes will be found some of the brightest ornaments of th	e
	flower-garden, either in respect to brilliancy of color, or length of duration is	
	bloom; fine for beds, borders, or ribbons. Hardy annuals.	
335	Silene Pseudo Atocion. Rosy-pink flower, with white centre; free-blooming	05
	Rubella. Red; from Portugal. 1 foot	05
	Alba, White: fine, I foot	05

### S. NVITALIA PROCUMBENS (new couble ,

SANVITALIA. NAT. ORD., Composite.

Pretty dwarf-growing, free-flowering plants, suitable for small beds, rock-work, or edgings; continuing in bloom during the summer and autumn months; thriving best in light rich soil. Hardy annuals.

338 Sanvitalia Procumbens. Rich brown and yellow. ½ foot

New Double. A beautiful acquisition, with double flower, like pompone Chrysanthemum; very dwarf, and undoubtedly one of the finest yellow plants; suited for beds and masses. ½ foot . . .10 .10

# SPHENOGYNE. NAT. ORD., Compositæ.

A very showy, free-flowering plant; very effective for beds, mixed borders, edging, or ribbons. Hardy annual.

## SULTAN. NAT. ORD., Compositæ.

Handsome border annual, of easy culture: native of Persia, with fragrant flowers from July to September.

TAGETES SIGNATA PUMILA (full-grown plant, reduced to one-tenth its natural size).

### TAGETES. NAT. ORD., Compositæ.

Elegant free-flowering plants, with pretty foliage; very effective in mixed borders: succeeds best in a light rich soil. Half-hardy annuals.

353 Tagetes Signata Pumila. (See cut.) An elegant new dwarf variety, about one foot high; and, when full grown, the plant will measure two feet in diameter, forming a beautiful compact bush, completely covered with flowers, and continuing in bloom until hard frost sets in . . .

TAGETES SIGNATA PUMILA (full size of flower).

	RICE.
VENIDIUM. NAT. ORD., Compositæ.	
An exceedingly showy plant, with large, handsome flower, having a very gay appearance in beds or borders; thrives best in turfy loam. Half-hardy annual.	
354 Venidium Calendulaceum. Deep orange; rich brown cantre. 1 foot	.10
VENUS'S LOOKING-GLASS. NAT. ORD., Campanulaceae.  A free-flowering, pretty little plant, of nice habit of growth, especially adapted for beds, ribbons, or edgings; grows well in any garden soil. Hardy annual.	
355 Venus's Looking-Glass (Campanula). Finest mixed; from south of Europe. 1/2 ft	.05
VISCARIA (Rose of Heaven). Nat. Ord., Caryophyllaceæ.  A genus of remarkably pretty, profuse-flowering plants, producing a striking effect in beds, ribbons, or mixed borders. Hardy annuals.	
356 Viscaria. Finest Mixed	.05
WHITLAVIA. NAT. ORD, Hydrophyllaceæ.  A very handsome free-flowering plant, suitable for beds and borders; from California. Hardy annual.	
358 Whitlavia Grandiflora. Violet-blue. 1 foot	.05
ZINNIA N O Oit-	
ZINNIA. NAT. ORD., Composite.	
A grand genus of autumn-flowering plants, combining the greatest richness and diversity of color with unequalled profusion and duration of bloom.  Among the novelties of recent introduction, the New Double Zinnia has proved a most important acquisition. Its splendid double flowers rival, in beauty, size, and form, moderate-size dahlias.	
359 Zinnia Elegans. Mixed. 2 feet	.05
360 — Double. The seed we offer was saved only from the finest double flowers, and will produce a large percentage of double-flowering plants. Mixed.	.10
361 — Mexicana. It is a neat dwarf plant, of compact habit, scarcely one foot high, much branched. It is offered in some lists under the name of Zinnia Haggeaga and also Aurea and Sanytickie Mariaga.	.10

DOUBLE ZINNIA.

NO.

ZEA. NAT. ORD., Gramineæ.

PRICE.

One of the most valuable acquisitions. Among ornamental-foliaged plants of rapid growth and immediate effect, the new Striped Japanese Maize holds the most conspicuous place. It is a native of Japan. It appears to be a variety of Maize, but differs in many respects from our common Indian Corn. It grows from five to six feet high, and has alternate foliage; the foliage is about four feet long, and two or three inches wide. The variegation does not show itself until the fourth or fifth leaf.

362 Zea, or Striped Japanese Maize. .

. .10

# BIENNIALS AND PERENNIALS FLOWERING FIRST AND SECOND SEASON.

ABRONIA. NAT. ORD., Nyctaginiacæ.

This beautiful plant is a native of the Rocky-Mountain country, and can hardly be surpassed for beauty and elegance. It is a hardy perennial, of trailing habit, sending up immense numbers of flowers of a pure white color, in clusters resembling the Snowball. It opens its flowers, which possess a delightful fragrance, towards evening. In bloom from June to September.

ACONITUM (MONKSHOOD). NAT. ORD., Ranunculaceæ.

A common border-plant, commonly known as Monkshood, growing freely in any situation. Hardy perennial; from Europe.

NO.		RICE.
	ACANTHUS. NAT. ORD., Acanthaceae.	
(	These deserve a place in every collection, from their stately appearance, and the legend of their leaves having given the first idea of the capital of the Corinthian order of architecture. They require a good sandy loam. Hardy perennials.  Acanthus Mollis. White. From Italy. 3 feet.	.05
	AGROSTEMMA (ROSE CAMPION). NAT. ORD., Caryophyllaceæ.	
1	Are perfectly hardy, very easily raised from seeds, and will well repay the little care they require. The flowers are produced on long stems, blooming freely throughout the season. Hardy perennial. For annual varieties, see Viscaria.  Agrostemma. Fine mixed; purple and white	.05
	ALSTRŒMERIA. NAT. ORD., Amaryllidaceæ.	
<b>36</b> 8	This is a genus of tuberous-rooted plants, with beautiful flowers; requiring to be grown in a sheltered position to have them in perfection. Half-hardy perennials  Alstræmeria Van Houtte. Finest hybrids. 1½ feet	.25
	ALYSSUM. NAT. ORD., Cruciferæ.	
	One of the most useful, free-flowering little plants, either for growing in pots, on rock-work, or the open border. Hardy perennials.	
	Alyssum Argenteum. Yellow, silvery foliage; from Switzerland. 1 foot .	.05
	- Saxatile. Yellow; very showy. 1 foot	.05
371	— Wiersbeckii. White and yellow	.10
1	ANCHUSA. NAT. ORD., Boragneee.  Coarse-growing plants, natives of the south of Europe, remarkable for their intensely blue flowers. Hardy perennials.	
	Anchusa Arvalis. Blue. 2 feet	.05
	ANEMONE. NAT. ORD., Ranunculacea.	
	All the plants belonging to this genus are beautiful, and well deserving of cultivation; succeed well in any light soil. Hardy perennials.	
	Anemone Coronaria. Mixed from selected flowers. ½ foot	.10
	— Pulsatilla (Pasque Flower). Violet	.10
3/15	—— Species Nova Pontica. Described as a very beautiful alpine plant; native of the subalpine regions of the Pontic Mountains	.25
376		.25
•	ANTIRRHINUM (SNAPDRAGON). NAT. ORD., Scrophulariaceæ.	
j t	The Snapdragon, or Antirrhinum, is one of our most showy and useful border plants. Amongst the more recently improved varieties of this valuable genus are arge, finely shaped flowers, of the most brilliant colors, with beautifully marked throats; will bloom the first season from seed, and are very effective in beds or mixed borders. Half-hardy perennials.

BOCCONIA JAPONICA.

BARTONIA. NAT. ORD., Loasea.	BARTONIA.	NAT.	ORD.,	Loaseæ.
------------------------------	-----------	------	-------	---------

PRICE.

414 Bartonia Nuda. This is a perfect gem. It grows two to three feet high, and is literally covered with its large white flowers, of the most delicate texture, surpassing even the finest lace-work. The flowers are two and a half inches in diameter, and produced in abundance. Hardy perennial.

BELLIS (DOUBLE DAISY). NAT. ORD., Compositæ.

A well-known perennial. Many elegant varieties have been raised by saving the seeds from the handsomest kinds. Admirable plants for making edgings, &c. 415 Bellis Perennis. Extra fine; saved from named flowers.

BOCCONIA. NAT. ORD., Papaveracea.

416 Bocconia Japonica. This noble plant, recently introduced from Japan, has been an object of unusual admiration. Allied to the fine Bocconia Cordata, it surpasses this in point of beauty, of robust, free growth, habit of plant, size, shape, coloring of leaves, and showiness of flower-spikes. It is perfectly hardy, requiring no protection in winter; of luxuriant growth, forming a bush five to six feet in height, which is decorated, from the month of August, by beautiful pyramidal spikes of flowers, two to three feet in length. Deeply serrated leaves, in the way of oak-leaves; are large, of an obtuse, cordate form, of a sombre green above, glaucous below

CALLIRHOE. NAT. ORD., Malvaceæ.

PHYGELIA CAPENSIS.

## CAMPANULA NAT. ORD., Campanulaceæ.

The Campanulas are strictly biennial plants by pot-culture, and, without exception, some of the finest of all garden-plants for decoration in conservatory, green-

NO.	house, and flower-garden. By good culture in pots, the tall varieties assume a magnificent effect, attaining five to seven feet or more in height, with lateral flower racemes from the base, four to five feet in length. The beautiful white variety forms a most striking contrast. By good arrangement, a rich and imposing effect can be formed, altogether unequalled by any other plants. Hardy perennials.	ICE.
418 419	Campanula Grandis. Deep-blue; from Italy. 3 feet	.10 .10

MYOSOTIS (FORGET-ME-NOT). NAT. ORD., Boraginaceæ.	
These beautiful little flowers are too well known to need recommendation; will	
grow around fountains, over damp rock-work. Hardy perennial.	
549 Myosotis Palustris. A well-known favorite, with clusters of delicate blue flow-	
ers appearing all summer; blooms the first year from seed. ½ foot	.05
550 — Azurea Major. A beautiful variety, with large blue flowers. ½ ft	.10
551 — Azorica. Blue, shaded with purple; a fine large-flowered variety	.10
552 — var. Collectina. A new variety of the well-known general favorite,	
M. Azorica. The flowers are sky-blue, nearly turquoise-blue; very constant	.25
NERIUM (OLEANDER). NAT. ORD., Apocynaceæ.	
A class of splendid double-flowering evergreen shrubs, of a highly ornamental character; fine for conservatory decoration, or placing on lawns and terraces during the summer; growing in any light, rich soil. Half-hardy shrubs.	
553 Nerium Oleander. Mixed colors	10
NIEREMBERGIA. NAT. ORD., Solanaceæ.	
Profuse-blooming, elegant, and charming little plants, exceedingly valuable for small beds, edging, and rustic baskets or vases. Half-hardy perennials.	
554 Nierembergia Gracilis. White, veined with lilac; from Uruguay. $\frac{1}{2}$ foot	25
NYCTERINIA. NAT. ORD., Scrophulariacea.	
Neat, compact little plants, covered with pretty, sweet-scented, star-shaped flowers; valuable for edgings, rock-work, stumps, or small beds; succeeds in a light, rich soil. From Cape of Good Hope. Half-hardy perennials.	
555 Nycterinia. Finest mixed	. 10

CENOTHERA LAMARCKIANA.

NO.	OBELISCARIA. NAT. ORD., Compositæ.	PRICE.
	Bold, showy plants, with rich-coored fllowers and curious acorn-like centres succeeds in any common garden-soil. From Texas. Halt-hardy perennial.	3;
556	Obeliscaria Pulcherrima. Velvety-crimson, tipped with yellow. ½ foot	10
557	— Aurantiaca. Yellow. 2 feet	10
	CENOTHERA. NAT. ORD., Onagracea.	
	A magnificent genus; one of the most useful and beautiful either for beds, both ders, edgings, or rock-work. Free-flowering. Half-hardy perennials.	r-
<b>558</b>	Enothera Camphylocarpa Grandiflora. Crimson-orange; large-flowered beautiful variety; from Peru. 1 foot	10
559	- Cinnabarina. Rich orange; yellow throat, stained with rich salmon	10
560	kingly beautiful of this splendid genus. 3 feet	10
561	Taraxacifolia. Pure white. 1 foot	10
562		10
	PANSY (HEARTSEASE, OR VIOLA TRICOLOR). NAT. ORD., Violaceæ.	
	The Pansy, or Heartsease, is a general favorite and old acquaintance with ever	У
	one who has any thing to do with a flower-garden. It begins to open its modes	t
	but lively flowers as soon as the snow clears off in the spring, and continues to en liven the garden till snow comes again. The flowers are in the greatest perfectio in May and June; the burning sun of summer is unfavorable for their greates	n
	in May and June; the burning sun of summer is unfavorable for their greates	t
	beauty, but in autumn they are fine again. The Pansy is properly a biennial, bu	ıt
	can be perpetuated by cuttings or division of the roots. Seeds sown in August, i	n
	the open borders, will come up readily in a few weeks. The seeds should be slightly covered with fine soil, if covered at all, as half the seeds sown rot in the	A
	ground from being covered too deep. They require to be covered during the win	i-
1	ter with evergreen boughs or a cold frame.

ROSE CAMPION. NAT. ORD., Caryophyllaceæ.	
The Rose Campions are perfectly hardy, and very easily raised from seed, and will well repay the little care they require. The flowers are produced on long stems, blooming freely throughout the season. Hardy perennial.	
596 Rose Campion, Mixed	.05
ROSE. NAT. ORD., Rosacea.	
597 Rose-Seed. From a large collection of hybrid Perpetual, Tea, Bourbons, &c	.25
ROCKET (HESPERIS). NAT. ORD., Cruciferæ.	
A well-known free-flowering spring plant, very fragrant; growing in any soil. Hardy perennial. From Europe.	
598 Rocket, Sweet, Mixed	.05
SEDUM (STONE-CROP). NAT. ORD., Crassulaceæ.	
A useful and interesting genus of pretty little plants, growing freely on rock or rustic work, also on ornamental mounds, old walls, &c., where, during summer, they expand their brilliant star-shaped flowers in profusion. Hardy perennial.  599 Sedum, Mixed. Choicest varieties	.10
	•10
SILENE. NAT. ORD., Caryophyllaceæ.  Among the tribe of Silenes will be found some of the brightest ornaments of the flower-garden, either in respect to brilliancy of color, or length of duration in bloom; fine for beds, borders, or ribbons.	
600 Silene Schafta. Rosy-lilac; from Russia. Hardy perennial	.05
The Intermediate or autumn-flowering varieties, if sown early in spring, will bloom the same autumn. For winter flowering, they should be sown in June. They are also valuable for early spring blooming, for which purpose they should be sown the last of July or in August, and kept from hard frost during winter. Plants treated in this way, and planted out in beds in May, make a rich display.  The Emperor, or perpetual-flowering. This magnificent class of Stocks may be treated in the same manner as the Intermediate. They frequently last several years if protected from frost; hence its name, — Perpetual.  The Brompton and Giant Cape are generally called Winter Stocks on account of their not flowering the first year. The former is robust and branching. The latter possesses the characteristics so much esteemed; vix., immense pyramidal spikes.	
602 Stock, Intermediate, or Autumn-flowering. (Twelve distinct colors mixed.)	.10
603 — Perpetual, or Emperor. Finest mixed	.10

613	S Valerian. Finest mixed
	VERONICA. NAT. ORD., Scrophulariaceæ.
<b>e</b> 14	A genus of the most beautiful and showy evergreen shrubs, producing their handsome spikes of flowers in the greatest profusion. Hardy perennials.  10  11
014	veronica: Pinest mixed

VERBENA.

VERBENA. NAT. ORD., Verbenaceæ.

A charming genus of universally admired and easily cultivated plants, simply requiring the treatment of half-hardy annuals to have them bloom during the summer; for winter decoration they are invaluable. Half-hardy perennial.

NO.		CE.
	Verbena Aubletia. Reddish purple; from North America. Half foot	.05
	— Drummondii. Lilac; from Texas	.10
617	— Teucroides Odorata. Fine white; from Germany	.10
618	- Venosa. Rich purple; free bloomer; trailer. From Buenos Ayres	.05
	— Fine Mixed	.10
620	— Hybrida. From finest named sorts; extra mixed	.25
621	New Italian Striped. One of the best; brilliant colors of carnation-	۰.
	like, striped with rose, lilac, purple, on various-colored ground	.25
622	- Auriculæflora. A splendid novelty, large and well formed; blooms in	
	various shades, with a distinct eye of white or rose, and properly called Auriculæflora, as the disk comes near the Polyanthus and Auricula	.50
600	— Coccinea. From most brilliant scarlet flowers	.25
	- Montana. This is another gem, truly: it has the habit of the common	.40
0.44	Verbena, but is perfectly hardy, and blooms more profusely. The plant	
	literally covers itself with its bright, rose-colored flowers	.25
	•	
20"	VIOLET. NAT. ORD., Violaceæ.	
	Violet. The Czar. A very large and beautiful variety of the Violet. The flowers, which are of the deepest blue violet, are borne on very long footstalks (five to six inches in length), and are nearly twice as large and much sweeter than the old Russian Violet. It is so hardy that it commences blooming in September, and continues flowering until May,	.50
626	Viola Cornuta. One of the finest of all known violets for summer and autumn decoration. A neat, compact, perennial, herbaceous plant. Six to nine inches high, with small heart-shaped leaves; and yielding a succession of conspicuous, delicate, light-mauve-blue flowers as large as the leaves, in succession, from April to October. A beautiful plant for clumps or edgings, forming a rich, compact mass of green foliage, set off by the profusion of deep purple, mauve-color, and violet blossoms.	.50
		.00
	WALLFLOWER. NAT. ORD., Cruciferæ.	
	A useful and ornamental class of plants; very fragrant. Half-hardy perennial.	
627	Wallflower. Good mixed	.05
628	— Double. Finest German; mixed	.10
	ZAUSCHNERIA. Pat. Ord., Onagraria.	
629	Zauschneria Californica. A very interesting and valuable hardy autumn-	
	flowering plant, with a profusion of scarlet flower-tubes in September, Oc-	
	tober, and November; well adapted for dry, gravelly soils in sunny situations, handsome for beds and borders. Hardy perennials. 1 foot.	.25

# GREENHOUSE SEEDS.

# ABUTILON. NAT. ORD., Malvaceæ.

These flowers are extremely beautiful for the conservatory: they are natives of Brazil, and half shrubby, with vine-like leaves and bell-shaped flowers, being richly veined and striped, of a wax-like appearance. Many of the varieties succeed well in the open ground during the summer.

TROPÆOLUM LOBBIANUM.

MO.		ICE
	TROPÆOLUM. NAT. ORD., Tropæoleæ.	
	The following varieties, as hybrids from Tropæolum Lobbianum, are unsurpassed by any collection ever offered. They are all of the easiest culture, and	
	flower profusely the first year. Though not in all cases perpetuating their respec-	
	tive kinds true from seed, they nevertheless often produce still more beautiful ones.	
	In the greenhouse or conservatory they may be had in bloom the greater part of	
	the year; and in favored situations in the open air, for edgings, covering trellis-	
	work, or handles of rustic baskets, or trailing from vases, their elegance of form	
0.45	and brilliancy of color render them peculiarly valuable.	10

873 — Compacta. Very compact-growing variety of the Quaking-Grass; and will be found very ornamental for winter decoration and for bouquets25
BRYZOPYRUM. NAT. ORD., Gramineæ.
A very pretty dwarf variety of the ornamental grasses; good for dried bouquets.
874 Bryzopyrum Siculum. Distinct and beautiful; hardy annual. From N. Ame10

GYNERIUM (PAMPAS GRASS).

T.CHUSAUCK)

#### 

Singularly elegant perennial grass, nine to twelve inches in height, with flower-scapes or stems, having slender flower-spikes or rachis radiating horizontally from

the extremities of each scape like the concentric spokes of a wheel. Half-hard annual.	RICE.
876 Chloris Radiata. From East India. 1 foot	.10
CHRYSURUS. NAT. ORD., Gramineæ.  Very pretty ornamental grass, suitable for dried bouquets. Hardy annual.  877 Chrysurus Aureus. From Levant. ½ foot.	05
COIX. NAT. ORD., Graminea.	05
878 Coix Lachryma (Job's Tears). A very curious ornamental grass, having seeds which have the appearance of large tears; from East Indies	.05
ERAGROSTIS. NAT. ORD., Gramineæ. Ornamental grasses; suitable for winter bouquets.	
879 Eragrostis Elegans (Love-grass). From South of Europe	.05
880 — Cylindrifolia. From China	.05
ERIANTHUS. NAT. ORD., Gramineæ.	
881 Erianthus Ravennæ. This is a bold-looking, reed-like grass, from four to six feet high, with a fine foliage, resembling much in appearance the Pampas grass; rare. Half-hardy perennial; from south of Europe.	
ELEUSINE. NAT. ORD., Graminea.	
Ornamental grasses; light and graceful.	
882 Eleusine Coracana. From East Indies	10
883 — Indicum. From East Indies	10
GYNERIUM (PAMPAS GRASS). NAT. ORD., Gramineæ.	
884 Gynerium Argenteum. This is, without exception, the most stately growing species of grass known. In stature it rivals the Bamboo, attaining, in its native plains (South America), from ten to fifteen feet in height. In northern latitudes, it should be protected in winter by removing to the cellar or cold frame. Half-hardy perennial See cut p. 79.	i L
HORDEUM. NAT. ORD., Graminea.	
885 Hordeum Jubatum. A fine new ornamental grass	.10
IMPERIATA. NAT. ORD., Gramineæ.	
A magnificent, hardy grass, quite recently introduced from Amoor, with grace- ful curved foliage, forming a fine bush about three feet high, throwing out numer- ous flower-spikes about five feet in height, bearing glittering silvery plumes of flowers; extremely pretty. The leaves are lively green, with a broad, silvery line down the middle; and the habit and bearing of the plant are quite as handsome as Gynerium.	
886 Imperiata Sacchariflora	25
OATS (AVENA SENSITIVA). NAT. ORD., Gramineæ.	
A very curious genus of ornamental grasses; fine for dried bouquets; suitable for mixed borders. Hardy annual.  887 Oats Animated. Curious. 2 feet	05
SPERGULA. NAT. ORD., Caryophyllaceæ.	
Extremely neat, moss-like plants, of a beautiful, lively green, largely used as a substitute for grass on lawns, which they quickly cover, and require no further attention than rolling and keeping free from weeds; found to thrive best on stiff soil.	
888 Spergula Pilifera. From Corsica. 1/8 foot	.10
STIPA. NAT. ORD., Graminea.	
889 Stipa Gigantea. Fine ornamental grass 890 — Pennata (Feather Grass). Beautiful	.10

CELOSIA AUREA PYRAMIDALIS (side-shoot).

CELOSIA. NAT. ORD., Amarantaceæ.

Magnificent, free-flowering, graceful-growing plants, producing in the greatest profusion spikes of the most beautiful feathery-looking flowers (see engraving,

which represents a side shoot of Aurea Pyramidalis). Celosia Argentea, however, produces its flowers in spikes, like a Gomphrena (Globe Amaranthus), but much longer; and, if gathered when young, they are valuable for winter bouquets. Grown in pots, they are the most elegant. Half-hardy annuals.	ICE.
<ul> <li>895 Celosia Argentea. Silvery white, shaded with bright rose; very handsome. 3ft.</li> <li>896 — Aurea Pyramidalis. Magnificent golden-feathered plant. 3 feet.</li> <li>897 — Coccinea Pyramidalis. Crimson, same as the preceding, differing only in color. 3 feet.</li> </ul>	.10 .25
898 — Pyramidalis Nana Aurantica. Erect, from fifteen to eighteen inches; leaves oval, acuminated, bright green; trusses of flower-spikes pyramidal, of a brilliant buff yellow	.25
899 — Pyramidalis versicolor. Oval acuminated leaves of red brown; all the spikes terminated by bright carmine trusses before opening, passing gradually to violet carmine. 3 feet	.25
COCKSCOMB. Nat. ORD., Amarantaceæ.  Highly ornamental, curious-looking flowers, for decoration of the flower-house, drawing-room and garden; all the varieties are remarkably attractive, producing a fine effect when grown in pots and mixed with other plants, either on the stage of a greenhouse, or planted in some warm situation out of doors. The following sorts have been saved from combs remarkable for their size and symmetry. Half-hardy annuals.	
900 Cockscombs, Mixed Varieties	.05 .10 .10
GLOBE AMARANTHUS. NAT. ORD., Amarantaceæ.	.10
The Globes are well known, and much admired for their ornamental effect in the garden, and are highly prized for their heads of flowers, which, if gathered before they are too far advanced, will retain their beauty for several years. The seeds are rather slow to vegetate in the open ground, the orange in particular, which seldom starts without bottom heat. Tender annual.  904 Globe Amaranthus (Gomphrena). Crimson; fine; 2 feet	.05
905 — Variegated. From India. 2 feet	.05
906 — — White. From India. 2 feet	.05
GNAPHALIUM. NAT. ORD., Compositæ.	.00
Fine everlasting flowers, useful for making dry bouquets; will grow in any common garden-soil. Half-hardy annual.	
908 Gnaphalium Fætidum. Yellow. 2 feet	.10
HELICHRYSUM (ETERNAL FLOWERS). NAT. ORD., Compositæ.  The Helichrysum are very ornamental in the garden, and much admired on account of the beauty of the flower when dried, which, if gathered when they first open, and carefully dried, will retain their form and color for years. They are highly prized for winter mantle-bouquets and ornaments for vases. Hardy annuals.	
909 Helichrysum Atrosanguineum Nanum. Dwarf; deep-crimson. 1½ feet 910 — Atrococcineum Nanum. Very dwarf; dark-scarlet; very fine. 1½ ft.	.25
911 — Borussorum Rex. New; white variety; very free-flowering	.10 .25
912 — Compositum Maximum. One of the finest of the class; flowers very double, and a large variety of colors mixed	.10
913 — Finest Mixed. Including twelve sorts	.10
HELIPTERUM. NAT. ORD., Composite.  914 Helipterum Sanfordi. Pretty dwarf-tufted everlasting, with small neat foliage, and large globular clusters of bright golden-yellow flowers. It grows well in the open border, and the flowers are fine for winter bouquets.	.10
RHODANTHE. NAT. ORD., Compositæ.	
Charming everlasting flowers, of great beauty, equally valuable for the decoration of the conservatory and flower-garden. Its neat, compact growth makes it a suitable plant for bedding or ribboning, while its bright-colored flowers, elegant style of growth, and profuse blooming, render it an object of universal admiration. The flowers, if gathered when young, make valuable winter bouquets. Succeds best in a light rich soil, and a warm, sheltered situation. Half-hardy annuals.	

NO. 915	Rhodanthe Manglesii. Neat, unique, and beautiful; with numerous semi-double, daisy-like flowers, of rich rose-color, suffused with white, retaining their transparency and beauty. 1 foot	.10
916	— Maculata. Very robust, fine, glossy, heart-shaped foliage, of graceful bear-	
	ing, with flowers from one and a half to two inches in diameter, of a bright, deep, rosy carmine, rendered more brilliant by a broad, velvety,	
	blackish, purple-crimson belt, surrounding the bright-yellow disk. 2 ft.	.10
917	- Atrosanguinea. Dwarf; branching species, with longer and more	
		.10
918	Alba. Pure, silvery-white variety, of same size of flower as R. Macu-	10

RHODANTHE MACULATA.

XERANTHEMUM. NAT. ORD., Compositæ.	
A fine everlasting flower, good for winter bouquets. Hardy annual.	
919 Xeranthemum. Finest mixed	40
WAITZIA. NAT. ORD., Compositæ.	
Another fine annual Everlasting, of bushy, compact habit, growing about 1 foot	
high, and as much in diameter, each branch terminating in clusters of elegant flow-	
ers of a deep amaranth color, with small yellow disk. Also fine for pot-culture.	
920 Waitzia Corymbosa	.25

# SPLENDID ASSORTMENTS OF FRENCH AND GERMAN FLOWER-SEEDS.

We invite the attention of our numerous customers to the following list of assortments of flower-seeds. They have all been selected expressly for us, by our special correspondents in France and Germany, from the various noted flower-seed growers, whose well-known reputation is a sure guaranty of their st.perior excellence, both as regards distinctness of color and freshness of seed. We have no hesitation in recommending them as equal, if not superior, to any to be obtained in Europe.

#### THE

#### AMATEUR CULTIVATOR'S GUIDE

#### TO THE KITCHEN GARDEN.

N again presenting our Catalogue of VEGETABLE SEEDS, we embrace the opportunity to add that our stock, as heretofore, has been selected with a view to secure only the freshest and most reliable seeds. Most of the staple seeds are raised expressly for us by experienced growers; and such as are imported are purchased from the most reliable seedsmen in Europe, with whom we have long dealt, and from whom we have received only such as we could with perfect confidence rec-ommend. It is our invariable rule to test all our seeds ourselves, and never to send out anything but what we are certain will vegetate freely, and prove true to name. Nothing causes greater disappointment than poor seeds; for not only is the season lost if they fail to grow, but an inferior

crop will not pay for the trouble of planting. American-grown seeds always have our preference; but some kinds it is impossible to obtain in sufficient quantity to fill our orders, and those are obtained only from reliable dealers abroad.

Our prices are affixed by the ounce, quart, and packet; but no quantity is sold less than the ounce or quart at these prices: when less is ordered, they will be supplied in packets at that rate. All the kinds can be supplied by the pound or bushel at the lowest market rate for prime seeds.

Prices of seeds vary, to some extent, from the time of harvesting to the time of planting, and we do not feel bound by these prices unless orders are sent in early. We can only advise our customers to give their orders in good season to secure the most favorable terms.

#### ARTICHOKE (CYNARA SCOLYMUS).

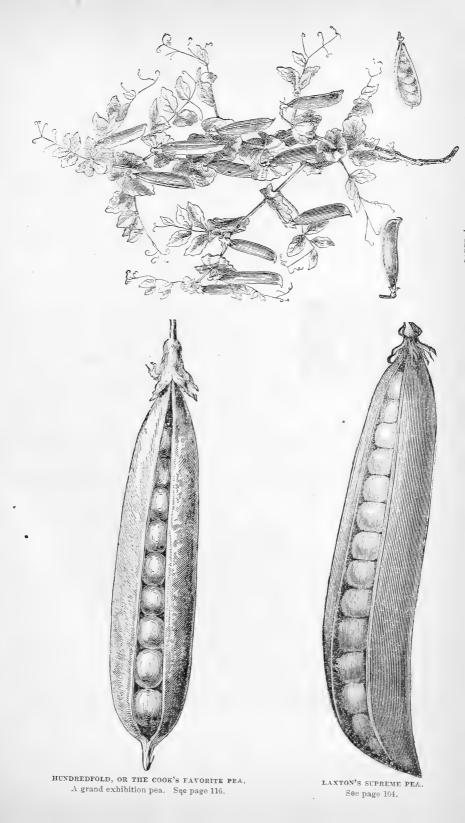

German, Artischoke. - French, Artichaut. - Spanish, Alcachofa.

The Artichoke is a native of the south of Europe, and is principally cultivated in the gardens of the French, by whom it is considered more as a luxury than as a profitable esculent. The heads, in their immature state, and before their blue thistle-like flowers open, are cut, and boiled in salt and water. The edible part is merely the fleshy substance on the bottom of the scales, which, to make palatable, has to be dipped in a nicely prepared sauce of butter and spices. They are frequently eaten as salad in a raw state.

Culture. — The Artichoke may be grown from seed or offset suckers, separated early in spring. The best way to obtain a supply from seed is to sow the seeds in April in a bed of good rich earth, or it may be planted in drills one inch deep, and about twelve inches apart. It should be transplanted the following spring to a permanent place. Either in beds or drills, plants should stand two feet apart each way, requiring a deep, rich, moist loam; also should be protected with leaves or straw during winter.

Large Globe. A very large sort, most generally cultivated. Heads or buds very large, nearly round, and with a dusky-purplish tint. Per packet, 10 .50

Green, or Common. Heads large, of a conical form; scales deep green, thick, and fleshy; pointed at the tips, and turned outwards. Per packet, 10 .

ROBINSON'S CHAMPION DRUMHEAD CABBAGE. The largest cabbage in cultivation. See page 115.

#### ASPARAGUS (ASPARAGUS OFFICINALIS).

German, Spargel. - French, Asperge. - Spanish, Esparrago.

This universal vegetable is supposed to be a native of Great Britain, where it is found on the banks of sandy soil contiguous to the sea, growing luxuriantly under the salt breezes.

There are, it is said, several varieties of Aspara-

Culture. — Sow the seed early in spring, one inch deep, and three or four inches apart, in rows one foot apart. When two years old, they may be transplanted into permanent beds, the plants placed a foot apart in each direction, and at least four

inches beneath the surface.

To make it "Giant," be particular to select for the bed warm rich soil. Trench it at least eighteen inches deep, working in six inches or more depth of well-rotted manure. Every fall cover the bed with manure, and in spring dig it in lightly, care being taken not to disturb the roots.

Giant Purple top. Grows to a good size; excellent. Per pkt., 5 .10 Conover's Colossal. A European variety, introduced several years since, which, by a careful selection of seeds from the most vigorous shoots, has been wonderfully improved both in size and quality, in point of which it surpasses all other varieties in cultivation. Per pkt., 10

#### ENGLISH BEAN (FABA VULGARIS).

German, Gartenbohne. - French, Feve de Marais. - Spanish, Haba.

The following varieties are much grown in England, but find little favor in this country.

Culture. — Sow as early as the ground will admit, in rows two feet apart, and three inches apart in the rows. They will come sooner into bearing if the tops of the plants are pinched off as soon as they are in full bloom. Succeed best in a deep, strong, loamy soil.

By Mail, 8 cents a pint extra. Early Mazagan. From Mazagan, on the coast of Africa, is one of the hardiest sorts now in cultivation. Stems from

two to three feet high This familiar sort is Broad Windsor. much esteemed and extensively cultivated, remaining fit for use longer than any other variety. A sure

BEANS, Bush (Phaseolus Vulgaris). German, Bohne. - French, Haricot. - Spanish, · Frijolenano.

The plants of this class vary from a foot to two feet in height. They require no stake or pole for their support.

By Mail, 8 cents a pint extra. per qt. Early Yellow Six Weeks. Excellent for string or shell; one of the earliest.

Early Turtle Soup. Much esteemed, when dry, for cooking.

<b>Culture.</b> — For early use, sowings are sometimes made in November; but the gener practice is to sow the seed in April, as soon as the frost is out of the ground, or as soon	
Culture.— For early use, sowings are sometimes made in November; but the gener practice is to sow the seed in April, as soon as the frost is out of the ground, or as soon the soil can be worked. For use in autumn, the seed should be sown about the middle	as

twentieth of May; and for the winter supply, from the first to the middle of June. Lay out the ground in beds five or six feet in width, and of a length proportionate to the supply required; spade or fork the soil deeply and thoroughly over; rake the surface smooth and even; and draw the drills across the beds fourteen inches apart, and about an inch and a half in depth. Sow the seeds thickly enough to secure a plant for every two or three inches, and cover to the depth of the drills. When they are two inches in height, they should be thinned to five or six inches apart.

EGYPTIAN BEET (one-third natural size).

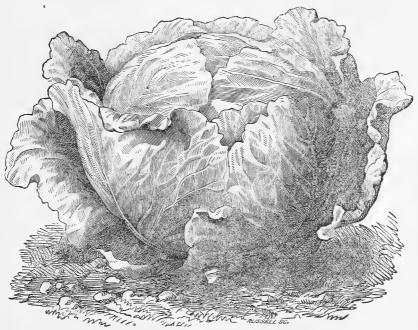

ne	r oz.
Egyptian Turnip. This new variety was sent us for trial last season, and proved	
one of the finest. Very dark, early, good form, and fine flavor. One of	
the very best. Per pkt., 10	.30
Early Flat Bassano. An Italian variety; seven to ten days earlier than the Early	
Turnip. Flesh white, circled or zoned with bright pink; very tender	
and juicy; not suited for winter use unless sown quite late. Per pkt., .5	.15
Simon's Early. An improvement on other early kinds; and is now superseding	
the Bassano, being quite as early, and of a blood-red color; smooth and	
turnip-shaped. Most valuable variety for the market. Per pkt., 10	.20
Early Turnip Blood. One of the best for general use. Flesh deep blood-red,	
sometimes circled and rayed with paler red; sweet and tender. Per pkt., 5	.15
Early Yellow Turnip, or Orange. A sub-variety of the Blood Turnip, differing	
in color. Flesh yellow, close grained, sweet, and tender. Per pkt., 5.	.15
Long Smooth Dark Blood. An improved variety of the Long Blood. Flesh	
sweet, tender, and fine grained; fine winter beet if sown late. Per pkt., .5	.15
Henderson's Pineapple. Short top, medium size. Flesh very deep blood-red, fine	
grained, sweet, tender, and of excellent quality. Per pkt., 10	.30
White Sugar. A large variety, grown extensively for feeding stock, although the	
young roots are tender, sweet, and well flavored. Per pkt., .5.	.10
Long Red Mangel Wurzel. A large variety, grown principally for feeding stock.	
When young, is sometimes used for the table. Flesh white, zoned and	.10
clouded with different shades of red; is hardy, and keeps well. Per pkt., .5	.10
Yellow Globe. Large, round, orange-colored variety; keeps better than the Long	.10

tween the late Broccoli and the Cauliflower. Per pkt., 10	1.00

EARLY SCHWEINFURTH CABBAGE.

#### CABBAGE (BRASSICA OLERACEA CAPITATA).

German, Kopfkohl. - French, Chou Pomme. - Spanish, Repollo.

One of the most popular vegetables grown.

Culture.— The Cabbage can be cultivated by the most simple and easy means. It grows in most soils, and produces its beneficial heads nine months in the year. The ground must be rich, or made so by a good coat of manure, as they have strong, tapering roots. Digging or ploughing deep is very essential. For early use, sow in hotbeds in February or March; and for winter, the seeds may be sown in the open ground in May or June. When five or six inches high, transplant to from twelve to thirty inches apart.

Wintering Cabbages.—If you have not a dry, airy, vegetable cellar nor open shed to spare for burying them, take a sheltered part of the garden, and bury the roots, stalks, and part of the head, in the earth; over which, in severe weather, place a good sprinkling of straw, and a few boards. In southern latitudes, this is unnecessary.

Early Wyman. The best and most profitable early market-cabbage grown. It heads early, is of large size and first quality, and brings the highest price of any early cabbage brought into the Boston market, selling readily last season by the thousand, at \$18 per hundred. It took the first prize at the last and several previous exhibitions of the Mass. Hort. Soc. Per pkt., 25 . 2.00

Pe	r oz.
Early Schweinfurth. A remarkable and valuable variety, both for earliness and	-
large size; adapted chiefly for summer and autumn use. Per pkt., 15.	.75
Early York. As an early market sort, one of the most popular. The head is of	
rather less than medium size, roundish-ovoid, close and well-formed; ten-	
der and well-flavored. Per pkt., 5	.20
Early Wakefield. (Jersey) similar in form to the Early York, and nearly as early;	
grows to a good size; a favorite with market-gardeners. Per pkt., 15.	7.6C
Early Drumhead, or Battersea. This is a round flat-headed variety, of excellent	
quality; one of the latest among the early sorts. Per pkt., 10	.35
Early Queen. Very fine; medium size; quite early. Per pkt., 5	.35
Green Glazed. Heads large, rather loose. Its texture is coarse and hard; less liable	
to the attacks of the cabbage-worm than other sorts. Per pkt., 5	.40
Large York. A larger variety than the Early York, which it somewhat resembles.	
The head is broader, and more firm and solid. Per pkt., 5	.25
Large Late Drumhead. Heads large; round, sometimes flattened a little at the top;	
close and firm; very hardy, and keeps well for a winter cabbage. Per pkt., 5	.40
Large French Oxheart. A variety which is taking the place of many others. It is	
tender, forms its heads readily, and well-flavored. Per pkt., 10	.30
Little Pixie. A comparatively new variety; makes a small delicate-flavored head;	
one of the very earliest and best. Per pkt., 10	.40
Stone Mason Drumhead. Originated by Mr. Mason, of Marblehead, Mass. It is	
characterized for its sweetness and for its reliablity for forming a solid	
head. It is also an excellent variety for northern latitudes. Per pkt., 10	.40

MARBLEHEAD MAMMOTH DRUMHEAD CABBAGE.

Marblehead Mammoth Drumhead. The largest Cabbage in the world.  This (the Mammoth) is, without doubt, the largest variety of the Cab-	
bage family in the world, being the result of the extreme of high culture.  In form this variety differs, the head being sometimes nearly hemispheri-	
cal, at other times nearly flat. Under high culture it is compact and hard.	
Its size is indeed mammoth, ranging from that of a half-bushel measure up	
to that of a two-bushel basket, and even larger. They have been grown,	
and, when stripped of all waste leaves, could not be got into a two-bushel basket. Per pkt., 25	.00
Foltler's Improved Brunswick. The Earliest, Shortest-stemmed, and very best Drum-	
head yet offered. The Boston market-gardeners all use it in preference to	
any other. Every plant produces a good head, — when fully grown	
weighing from twenty to thirty pounds,—and requiring only ordinary cultivation. The quality is excellent. Per pkt., 15.	
	.75
Premium Flat Dutch. A low-growing variety; heads large, bluish-green, round,	
solid, broad and flat on the top, and often tinted with red and brown. As a winter variety, it has no superior. Per pkt., 10	90
	00
Red Dutch, or Pickling. This sort is used mostly for pickling, and often cut in shreds and served as a salad; medium size, oblong shape, and very solid;	
	35
or a good to a barbar country to them to	-

Winnigstadt. This is a German variety, somewhat similar to the Oxheart, but more regular; conical; heads very full and solid. All things considered, this is one of the best for general cultivation. Per pkt., 10	z. 30
Green Globe, or Curled Savoy. One of the best and most familiar of the Savoys; medium size; very tender. Per pkt., 16  Feather-Stem Savoy. A hybrid, possessing the growth and habit of Brussels Sprouts.	30 30

THE BOSTON-MARKET OR IMPROVED EARLY PARIS CAULIFLOWER, (Used, by permission, from The American Journal of Horticulture.)

#### CAULIFLOWER (BRASSICA OLERACEA BOTRYTIS).

German, Blumen Kohl. - French, Choufleur. - Spanish, Coliflor.

This very delicate vegetable was first introduced into England from the Island of Cypress, and is classed among the most delicious of vegetables.

Culture. — The proper seasons for sowing seeds are, for the early spring or summer crop, between the eighth and twentieth of September; and for the late autumn crop, about the first of April. The plants, as soon as they are two or three inches high, should be planted ent in a bed of rich light earth, three inches apart each way, so as to grow firm and stocky, to remove to their final place of growth. For the purpose of growing them to perfection, use a bed of the richest light earth, two feet deep, made very rich, with well-decom-

posed manure, surrounded by a frame covered with glass or shutters. The frame should be surrounded with straw or litter of some kind; also the glass or shutters should be covered with mats or dry straw in severe weather, observing to give plenty of air on mild and pleasant days to prevent the plants from drawing or damping off at the neck; should be kept well watered: soap-suds is beneficial. For a late autumn crop they require no particular care or skill.

care or skill.
Early Paris. Heads rather large, white, and compact; leaves large, stalk short; a very early sort; should be planted in spring. Per pkt., 25 1.50
very early soit, should be planted in spring.
Carter's Dwarf Mammoth. A very early hardy variety, of dwarf and compact habit, with a firm white head; one of the finest. Per pkt., .25 1.50
Erfurt Earliest Dwarf. One of the best for early forcing and open ground; very dwarf, leaves small, heads large and very firm; pure white. Per pkt., 50, 6.00
Erfurt Large Early White. An excellent variety, compact heads. Per pkt., .25 . 1.50
Walcheren. A very early variety, with close, compact head; a general favorite.
Per pkt., .15
Le Normand. A French variety; heads large, compact, and fine flavor; a superior
variety in all respects. Per pkt., 25
<b>Lemaitre.</b> A fine variety; producing a large, firm head, very white, and of superior
quality; much esteemed by the Paris gardeners. Per pkt., .25.
Boston Market. This is one of the finest varieties of this delicious vegetable
grown, and is very popular with the market-gardeners about Boston, who
find it particularly suited to this climate. It has been brought to its
present state of perfection by a careful system of cultivation, and selec-
tion of specimens from which to grow seed. It is very early; produces
uniformly large and fine solid flowers, or heads, of snowy whiteness and
excellent flavor. Weight of specimens, seven and a half pounds; diame-
ter, ten and a half inches; circumference, thirty-one inches; length of
foliage, twenty-nine and a half inches. Per pkt., .25. (See cut.) 1.50

#### CARROT (DAUCUS CAROTA).

German, Mohre. - French, Carotte. - Spanish, Zanahoria.

The Carrot in its cultivated state is a half-hardy biennial. It is generally served at table boiled with meats; it also makes an excellent ingredient for soups. As an agricultural root, it is not surpassed for feeding cattle.

Culture. The Carrot flourishes best in a good, light, well-enriched loam. If possible, the ground should be stirred to the depth of twelve to fifteen inches, incorporated with a liberal application of well-rotted compost, and well pulverizing the soil in the operation. The surface should next be levelled, cleared as much as possible of stones and hard lumps of earth, and made mellow and friable; in which state, if the ground contains a sufficient moisture to color the surface when stirred, it will be ready for the seed. This may be sown from the first of April to the twentieth of May.

Earliest French Short Horn. A very early variety; small size, and of excellent	
flavor. Fine for forcing; one of the best. Per pkt., .10	.20
Early Horn. A very early variety, and as a table carrot is much esteemed on ac-	
count of the smallness of its heart, and tenderness of its fibres. Per pkt., .5	.15
Orange Intermediate. Size medium; skin bright orange-red; flesh orange-yellow;	
well flavored, and, while young, excellent for the table. Per pkt., .5	.15
Improved Long Orange. A well-known standard sort. Roots long, thickest at or	
near the crown, and tapering regularly to a point; one of the best for ta-	
ble or field culture, and requires a very deep soil. Per pkt., .5	.15
Large White Belgian. Very large, and valuable for field-culture. Per pkt., .5.	.10
Improved White Green-top Orthe. An improved variety of the White Belgian, with shorter and much larger roots; perfectly smooth, cylindrical, and tapering to a rather blunt point. It is easily pulled out, and yields very	
large crops. Per pkt., .10	.15

#### CELERY (APIUM GRAVEOLENS).

German, Seleri. - French, Celeri. - Spanish, Apio.

Celery is one of the most popular salads used in this country.

Culture.—The seed should be sown in hotbeds in March, or in the open ground the last of April or first of May; but, when sown in the open ground, it vegetates very slowly, often remaining in the ground several weeks before it comes up. A bushel or two of stable manure put in a hole in the ground, against a wall or any fence facing south, and covered with a rich fine mould three or four inches deep, will bring the seed up much sooner. Suf-

ficient plants for any family may be started in a large flower-pot or two, placed in a sittingroom, giving them plenty of air and moisture. As soon as the young plants are about three inches high, prepare a small bed in the open ground, and make it rich and the earth fine. Here set out the plants for a temporary growth, placing them four inches apart. This should be done carefully; and they should be gently watered once, and protected for a day or two against the sun. Make the trenches a foot or fifteen inches deep, and a foot wide, and not less than five feet apart. At the bottom of the trench put some good, rich, but well-digested compost manure; for if too fresh, the celery will be rank and pipy, or hollow, and will not keep nearly as long or well. Dig this manure in well, making the earth fine and light; then take up the plants from the temporary bed, and set them out carefully in the bottom of the trenches, six or eight inches apart.

Blanching. - When the plants begin to grow, hoe on each side and between them with a small hoe. As they grow up, earth their stems; that is, put the earth up against the stems, but not too much at a time, and always when the plants are dry. Be particular and not allow the soil to get between the stems of the outside leaves and the inner one, as it is injurious to the plants. In frosty weather, they should be protected by covering the tops injurious to the plants. In frosty weather, they should be protected by covering the tops of the trenches well with dry litter; this should not be allowed to remain longer than is absolutely necessary: it is well to cover the whole with boards to shed the rain.

Boston Market. A favorite variety in the Boston market; remarkable for its tender, crisp, and succulent stems, and its peculiarly mild flavor. It is extensively cultivated by the market-gardeners around Boston, and surpasses any other variety for its great excellence. Per pkt., 10 .50 White Solid. Large, strong-growing variety; clear white, solid, and crisp. One of the best for market or general use. Per pkt., 10 . .30 Hood's Dwarf Imperial. A stout-growing, very compact, solid, and hardy variety, of superior flavor and distinct habit. Per pkt., 25. . . . . .75 Sealey's Leviathan Celery. A very large, solid, white variety; highly recommended. Per pkt., 10. .35 Laing's Improved Mammoth Red. Considered the largest variety yet produced; specimens under good cultivation having attained the extraordinary weight of eight to ten pounds, and, at the same time, perfectly solid; bright red; flavor unsurpassed. Per pkt., 10 40 Turner's Incomparable. Dwarf white, of stiff, close habit; solid, crisp and juicy.

Keeps in good order later in the season than any other. Per pkt., 10 .40 Carter's Incomparable Dwarf Crimson. A new variety, highly recommended; .50 dwarf habit; solid; of a deep crimson color. Per pkt., 10. Celery Seed. For flavoring soups, &c. Per oz., 10. Per lb., \$1.00. .10 CHERVIL (SCANDIX CERIFOLIUM). German, Gartenkerbel. - French, Cerfeuil.

Is a warm, mild, and aromatic plant. A native of Europe, and, in olden times, of great repute. After being boiled, it was eaten with oil and vinegar, and considered a panacea for courage, comfort to the heart, and strength to the body. It is much cultivated by the French and Dutch, who use the tender leaves in soups and salads as we use Parsley, and is considered by many to be a milder and more agreeable ingredient.

Culture. Chervil is an annual plant, and should be sown in March, April, and May, in drills about a quarter of an inch deep, and nine inches apart. Cover lightly, and press the soil firm with the foot; rake evenly, and give a gentle watering in dry weather. The leaves are fit for use when two to four inches inches high. Cut them off close; they will come up

again, and may be gathered in succession throughout the season.	
	r oz.
Chervil. Per pkt., 10	.25
CORN, INDIAN (ZEA MAIS).	
German, Welschcorn. — French, Mais. — Spanish, Maiz.	rqt.
Adams's Early. Much grown for early use and the market; very early. Per pkt., 10	.25
Crosby's Early Twelve-Rowed. The earliest variety of twelve-rowed sweet corn brought into Boston market, full kernelled, sweet, and delicious. Received the premium of the Massachusetts Horticultural Society, as the	
best early corn. Cultivated almost exclusively by Boston market-gardeners	.40
Darling's Extra Early Sugar is early, very tender, and sugary; yields well, produces little fodder, ears near the ground; the best for early use. Per	
pkt., 10	.30

Moore's Early Concord Sweet. Silver Medal Awarded. The following extract from the report of The Vegetable Committee of the Massachusetts Horticultural Society will give a full description:—
"The past year has not been so prolific of novelties in the way of vege-

tables as some of its predecessors. In this age of progress, when so many are engaged in striving to improve our garden-vegetables, it would seem strange indeed if, among them all, some real gain is not annually secured. Such a gain your committee feel confident the public will secure in 'Moore's' New Sweet Corn, which, after another season's NEW SWEET CORN, which, after another season's

trial, proves a decided acquisition.

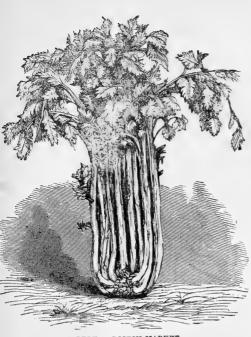

"To Capt. J. B. Moore, the well-known horticulturist of Concord, Mass., belongs the honor of originating this splendid variety. It is a cross between Crosby's early and Burr's improved,—the former the most popular early, and the latter the best late variety we have. After several years' of great care and labor, Mr. Moore has at last succeeded in bringing it to its present perfection. It was first crossed in 1865, and again in 1867. Stalks strong, stocky, and vigorous, growing from seven to seven and a half feet high; ears set rather low on the stalk, and having from twelve to sixteen, usually, and occasionally twenty, rows on the ear. Color, when fit for the table, very white and handsome. Quality superior, not surpassed by any other variety. Size of ears large, considsuperior, not surpassed by any other variety. Size of ears large, considerably larger than the Crosby; and superior to any other variety, either for the market or family use, and very productive. It also matures earlier than any other variety of equal size, which will make it a very desirable variety for the market-garden. The Society's Silver Medal was ble variety for the market-garden. The awarded Mr. Moore by your committee.

"Charles N. Brackett, Chairman."

Price per packet, 25 cents; per quart, 75 cents. Selected ears, 25 cents. per at. Red Cob Sweet. Medium; early; usually twelve, but sometimes fourteen rowed; quality good; cob red; kernels large. Per pkt., 10 . .30 Burr's Improved Sweet. An improved variety of the twelve-rowed Sweet. The ears are from twelve to sixteen rowed, and, in good soils and seasons, often measure eight or ten inches in length, and nearly three inches in diameter; cob white; hardy, productive, tender, and sweet; the best for general use. Per pkt., 10 . . . Stowell's Evergreen Sweet. This variety is intermediate in its season, and, if planted at the same time with the earlier kinds, will keep the table supplied till October. It is hardy and productive, very tender and sugary, remaining a long time in a fresh condition. Per pkt., 10. .30 Farmer's Club Sweet. Comes to table in seventy-five days; ears of the best table size, with eight regular rows; kernels large, and of a pearly white at all times; delightfully tender, sweet, and of unsurpassed creamy flavor, and retains those qualities longer than any other variety. Per pkt., 10 cts. .40 Nonpareil, or Pop-corn. A fine parching variety. Per pkt, 10 . . . .35 Rice. Hardy and prolific; good for parching. Per pkt., 10 .50 King Philip, or Brown. Very productive, and is recommended as one of the best field sorts now in cultivation .25 Early Dutton, or Golden Sioux. One of the handsomest of the field varieties; productive, and of good quality . CORN SALAD, or FETTICUS (VALERIANA LOCUSTA). per oz. German, Lammersalat. - French, Mache. - Spanish, Canonigos. An annual plant, cultivated for its tender leaves, which are esteemed as a winter and early spring salad. The seed is sown in shallow drills, early in Sept. On approach of winter, cover the plants with straw. Per pkt., 5 . .15 .50 Striped-Leaved. A striped-leaved variety; a novelty for the garden. Per pkt., 10 . CRESS, or PEPPERGRASS (LEPIDIUM SATIVUM).

German, Kresse. — French, Cresson. — Spanish, Mastruco.

The leaves, while young, have a warm, pungent taste, and are eaten as a salad, either separately, or mixed with lettuce or other salad-plants. Per pkt., 5 cts.; per oz., 10 cts.

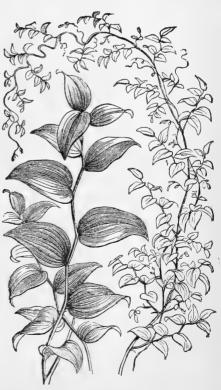

CELERY. — BOSTON MARKET. See Page 35.

BUNNEY'S INCOMPARABLE HARDY GREEN COS LETTUCE. See Page 120.

BRANCHING CORN. See Page 119.

SMILAX. See Page 127.

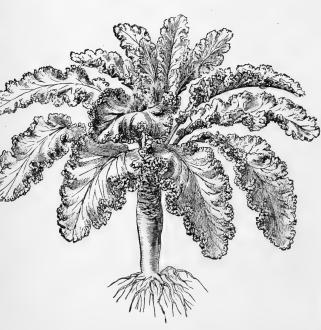

BOSTON MARKET MELON. See Page 97.

EARLY CLUSTER. Page 97.

WHITE SPINED. Page 97.

ACME KAIL. See Page 120.

GEN. GRANT CUCUMBRE. See Page 97.

EARLY FRAME. Page 97.

Culture.—Sow rather thick in shallow drills, and at short intervals during the season. The Water-cress requires to be grown on the edge of a running stream or brook where it does not freeze too hard during the winter.

### CUCUMBER (CUCUMIS SATIVUS).

German, Gurke. - French, Concombre. - Spanish, Cohombro.

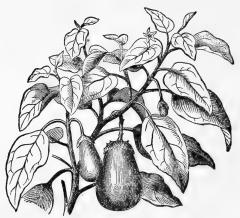

Culture, in the open air, is of the simplest character. Merely dig out a hole about a foot wide and deep; fill it with rich sandy soil; raise it above the surface about six inches. The hills should be six feet apart each way. If the weather be warm, they will grow in a few days. If the nights are cold, protect them. There is frequently a little bug which preys upon the tender leaves: if so, soot and wood-ashes, sprinkled over them while wet with the dew, will retard the progress of the depredator. To have young fruit in February and March is rather a nice operation; but any one who can command a few loads of warm horse-manure can have them from April to October. That the amateur cultivator may have the article either for family use or for sale, a few hints may be in place on forcing cucumbers. Prepare a frame, following the instructions laid down in the first part of this work for hotbeds. After the beds are in order, put in a good quantity of good, light, rich loam,—none better than the surface of the woods. In two or three days, the earth will be sufficiently warm for sowing the seeds. If the plants are to be removed into other frames, sow them in pots; if not to be removed, sow them in a hill made in the centre of the bed by placing a barrowful of soil in it. Cover the sash at night with straw mats, or any similar protection, and surround the beds with litter or boards to protect it from the piercing winds. The seeds vegetate quickly, and soon grow into strong plants. During their growth, admit air every day at the back of the frame, giving as much light as possible to the young plants.

Early Russian. This variety resembles the Early Cluster; fruit from three to four inches long, an inch and a half in diameter; generally produced in pairs; flesh tender, crisp, and well-flavored; comes into use ten days in advance of the Early Cluster, and makes a fine small pickle. Per pkt., 10 . .20 Early Cluster. A very popular early Cucumber, producing its fruit in clusters near the root of the plant; tender, and well flavored. Per pkt., 5 .15 Early Frame. One of the oldest of the garden sorts, justly styled a standard variety. Per pkt., 5 .15 Early White Spine. One of the best table sorts, and greatly prized by market-men on account of its color, which never changes to yellow. The fruit is of full medium size, straight, and well-formed; skin deep green; prickles white; flesh white, tender, crispy, and of remarkably fine flavor; very productive, and good for forcing. Per pkt., 5 .15 Long Green Prickly. This is a large-sized variety, and somewhat later than the White Spine; skin dark-green, changing to yellow as the fruit approaches to maturity: flesh white, somewhat seedy, but crisp; tender, and well-flavored; makes a good pickle if plucked while young. Per pkt., 5 .20 Haage's White Cylindric. A new long white variety; very prolific bearer, and recommended as a most valuable acquisition. Per pkt., 25. Long Green Smooth. Flesh greenish-white, firm, and crisp; flavor good. A German variety, twenty to twenty-four inches in length. Per pkt., 10. Stockwood Ridge. A very productive black-spined variety, having three to four fruit, twelve to eighteen inches long, at each joint; Per pkt., 10 .50 White Giant of Arnstadt. A new and beautiful snow-white variety, growing twenty to twenty-four inches long. Per pkt., 25 .50 West-India Gherkins. Used only for pickles. Per pkt., 15 English Gherkins. Fine for the table, or pickles. Per pkt., 10 General Grant. One of the newest and best varieties. It is perfect in form, solid, crisp, and most agreeable flavor; grows from twenty to thirty inches long; very hardy, and succeeds well in the open ground. It is a most desirable variety for exhibition, or for the table or forcing. Per pkt., 25. Bedfordshire Surprise. One of the most popular English varieties: black spine; growing from sixteen to twenty inches long; fine form; good flavor, and very solid; succeeds well in the open ground. Per pkt., 25

English Frame or Forcing Varieties. Berkshire Champion; Carter's Champion, selected; Cuthill's Highland Mary; Carter's White Spine; Manchester Prize; Lynch's Star of the West; Lynch's Conqueror of the West; Star of the West; Store of the West; Stir Colin Campbell; Stilwell's Matchless; Weedon's Surprise; Kenyon's Favorite; Walker's Rambler; Napoleon III. Per pkt., .25.

#### DANDELION.

These two varieties will, we have no doubt, soon supersede everywhere the old one, which has become in the last ten years one of our best and most-asked-for winter and spring salads. Culture same as Spinach.

PURPLE EGG-PLANT.

### EGG-PLANT (SOLANUM MELONGENA).

German, Cierpflanze. - French, Aubergine. - Spanish, Berengena.

The Egg-Plant was introduced from Africa, and is sometimes called the Guinea Squash. It is not generally cultivated, but is coming more into use every year. They are cut into thin slices, and fried, when they have a taste similar to oysters; they are also used in stews and soups.

Culture.—Sow in hotbed very early in spring; transplant, when two inches high, into a second hotbed; if that is not done, thin to four inches apart. Do not plant out till the weather becomes settled and warm. Keep plants watered for a few days if hot when put out. Where hotbeds are not convenient, a few plants can be started in flower-pots or boxes, and when planted out must have a deep rich soil, and full exposure to the sun.

Pekin, New Black. An entirely new and distinct kind, from China. The plant grows erect and handsome, attaining the height of two to three feet; with rich, dark, bronzy-purple foliage, very ornamental. The fruits are round, or globular, of a deep purple, almost black, weighing four to eight pounds each; skin, smooth and glossy. Exceedingly prolific, and as early as the long purple. The flesh is white, fine grained, and more delicate flavored than the old varieties. Per pkt., 25.

### ENDIVE (CHICORIUM ENDIVIA).

German, Endivien. - French, Chicorée. - Spanish, Endvia.

The garden Endive is a native of Northern China, and has been cultivated in Europe the past three centuries for a winter salad. The French are particularly fond of it, using it raw,

pickled, fried, and boiled, esteeming it exceedingly wholesome in every form.

Culture. — For the early crop, sow about the 1st of July. It will do on the ground where early Cabbages or Peas have come off, by giving it a coat of manure. Draw drills the depth of the hoe, one foot apart, and sow therein; sprinkle a little earth in the bottom of the drill, sufficient to cover the seed, which will be up in a few days. Thin them out, when about two inches high, to ten inches apart; hoe freely, and keep clear of weeds. Being grown in these shallow drills, they are more easily earthed up, and grow better in warm, dry weather. When the leaves have attained about eight inches long, they are fit for blanching; for this purpose a dry day must be chosen. Gather up the leaves in your hand, in a close and rounded form; see that there is no earth or litter in their centre. Tie them up with a piece of cotton twist or matting, which is to go several times round the plant, causing it to close at the top to prevent the rain from penetrating to and injuring its centre; then draw a little earth round its base for support.

Green Curled. Easily blanched; hardy, and well adapted for winter use. Per pkt., 10 .35
White Curled, or Ever-blanched. Lagree pela rell.

White Curled, or Ever-blanched. Leaves pale yellowish-green, nearly white when young; long, rather narrow; cut, and beautifully curled. Per pkt., 10 . .35

Fine Curled, or Moss. Very fine curled leaves, much resembling moss. Per pkt., 10 .35

### KOHL-RABBI, or TURNIP-ROOTED CABBAGE.

German, Kohl-rabiuber. — French, Chou-rave. — Spanish, Col de nabo.

The Kohl-Rabi is a vegetable intermediate between the Cabbage and the Turnip. The stem, just above the surface of the ground, swells into a round fleshy bulb, in form not unlike a turnip; on the top, and about the surface of this bulb, are put forth its leaves, which are similar to those of the Swedish Tumip. The part chiefly used is the turnip-looking bulb, formed by the swelling of the stem. This is dressed and eaten with sauce or with meat, as turnips usually are. While voung, the flesh is tender and delicate, possessing the combined flavor of the Cabbage and Turnip.

Culture. Cultivated same as Cabbage; only that, in earthing up the plant, be careful to the product of the Cabbage.

ful not to cover the globular part. They should not be used before they have attained their

full growth.

per oz. Early White Vienna. Above ground; early and fine. Per pkt., 10 . .30 Early Purple Vienna. Above ground; similar to the preceding. Per pkt., 10

Late Purple Giant. Very large and tender variety, often weighing from seven to eight lbs.; new. Per pkt., 10 .30 .40

### LEEK (ALLIUM PORRUM).

### German, Lauch. — French, Poireau. — Spanish, Puerro.

This is a branch of the Onion family,—a native of the north of Europe; is very hardy, and, from its mild qualities, is preferred by many families to the Onion. History records it as having been cultivated many hundred years. The Welsh indulge in Leeks on their patron St. David's Day, in commemoration of a victory which they obtained over the Saxons, which they attributed to the Leeks they wore, by order of St. David, to distinguish them in battle.

Culture. — There is no part of the garden too rich for Leeks. They require the best ground, well worked, and manured the full depth of the spade. Sow the seed thinly on a small bed of light rich ground, in drills six inches apart and half an inch deep; rake it sman bed of light the ground, in this size in the space. When they come up, they should stand an inch apart; if thicker, thin them out. When grown to about eight inches high, they will be of sufficient size to plant out in drills a foot apart, and as deep as the hoe will When ready, the plants are to be taken up from the seed bed. Shorten their roots to should not nich from the plant, and cut two inches or more from the extremity of the leaves. Dibble them in the drills eight inches apart, and as deep as the plant will admit of, not to cover the young leaves pushing from its centre. Hoe the ground frequently, to keep down weeds, and, as the plants are observed to grow, draw the soil around them. By good culture, they will be fit for use early in October. On the approach of severe frost, lift sufficient for the severe frost, lift sufficient for the severe frost, lift sufficient for the severe frost of the severe frost, lift sufficient for the severe frost of the severe frost, lift sufficient for the severe frost of the severe f cient for winter use, and store them away in earth or sand.

Large London is hardy, and of good quality. It is more generally cultivated in this country than any other variety. Per pkt., 10 . . . . . . . . . .30 Broad Scotch, or Flag. Remarkably hardy, and well suited for open culture; large and strong-growing. Per pkt., 10

### LETTUCE (LACTUCA SATIVA).

German, Lattich. - French, Laitue. - Spanish, Lechuga.

The Lettuce is generally divided into two classes: viz., Cabbage Lettuces and Cos Lettuces. The Cabbage have round heads and broad-spreading leaves; the Cos varieties have long heads, and upright, oblong leaves.

Culture. — A very rich soil is necessary to produce fine head Lettuce. tender quality depends very much on a luxuriant and vigorous growth. The earliest sowing may be made in February or March, under glass with slight heat. Keep the plants thin, and admit plenty of air to the frame every fine day. For later supplies, sow in the open ground as soon as the season will permit; transplant or thin out the plants gradually to a foot apart, and keep well cultivated. Early-curled Silesia. Standard sort; very early; the best for forcing, and the first spring sowing; makes a loose head; excellent flavor. Per pkt., 5 . .30 Early Tennisball. Most esteemed of the Cabbage Lettuce. The head is below medium size; dark-green; one of the earliest and best. Per pkt., 10 . .40 Early Drumhead, or Malta. Head large, somewhat flattened, compact; green without, and white at the centre; crisp; fine summer variety. Per pkt., 5 .25 Boston Curled. One of the best for general cultivation. The elegant frilling of the leaves, and fine form, make it very attractive; flavor very fine. Per pkt., 10 Large India. Heads large and compact, similar to the Curled Silesia; is less curled, and whiter; tinted with brown; heads crispy, and fine flavor. Per pkt., 10
Wheeler's Tom Thumb. A new English variety; very dwarf and compact; ex-.40 cellent flavor; crisp and refreshing. Per pkt., 10 .40 Hammersmith Hardy Green. It is considered the hardiest sort in cultivation, and is one of the best for growing in winter or forcing. Per pkt., 10 .40 White Paris Cos. This variety is grown mostly by London and Paris market-gardeners; tender, brittle, and mild-flavored. Per pkt., 10 .40 Large-spotted, or Tigered. Tender variety, with spotted leaves. Per pkt., 10 .40 Blood-red. Very tender variety, with red leaves; new. Per pkt., 10 . . . . Perpignan. A fine variety, forming large solid heads, with very crisp and tender .40 leaves; new. Per pkt., 10 .50 Bossin. Said to be the best Cabbage Lettuce in cultivation; in shape, color, and quality, it resembles the Batavian Lettuce. Per pkt., 25. Carter's Giant Brown Cos. Very large, crisp, and fine-flavored, with large broad leaves well turned; is one of the best late sorts. Per pkt., 25.

Dunnett's Giant Brown Cos. An English sort, similar to the preceding. Per packet, 25.

All the Year Round. A hard, crisp-eating, and compact-growing Cabbage Lettuce, with small, close heads; deep green. If sown in succession, it will provide Lettuce "All the Year Round." Per pkt., 25.

MARTVNIA.

#### MARTYNIA (MARTYNIA PROBOSCIDIA).

A hardy annual plant, with a strong branching stem two feet and a half high. The leaves are large, heart-shaped, entire, or undulated, downy, viscous, and emit a peculiar musk-like

odor when bruised or roughly handled. The young pods are the parts of the plants used. These are produced in great abundance, and should be gathered when about half grown, or while tender and succulent. After the hardening of the flesh, they are worthless. They are used for pickles, and by many are considered superior to the Cucumber, or any other vegetable employed for that purpose.

Culture. — The Martynia is of easy culture. As the plants are large and spreading, they should be two and a half feet apart in each direction. The seeds may be sown in April or May, in the open ground, where they are to remain; or the seeds may be sown earlier in a hotbed, and transplanted.

LARGE MUSK MELON.

CITRON WATER-MELON.

### MELON, MUSK VARIETIES (CUCUMIS MELO).

German, Melone. - French, Melon. - Spanish, Melon.

The Melon, in some character, is to be found in all tropical countries: the finest varieties are supposed to have come from Persia and Afghanistan. The delicious flavor and perfume make it very popular in all countries where the climate will admit of its cultivation.

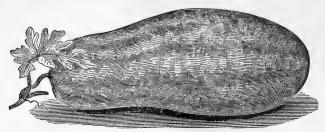

Culture. — Plant in hills six feet apart each way, eight or ten seeds in each, and thin out to three or four plants when in a state of forwardness. To grow good melons, the hills should be prepared by digging out the soil from one and a half to two feet deep, and two or three feet broad, according to the richness of the land. Add a very liberal quantity of the best decomposed stable-manure, and mix well with the soil, filling up a little above the level. Seeds should not be put into the hills until the weather becomes settled and warm.

	0Z.
Christiana. Form roundish; size rather small; flesh yellow, sweet, juicy, and of	
good quality; one of the best; very early. Per pkt., 10	.20
Green Citron. Nearly round, flattened slightly at the ends; medium size; flesh	
green, quite thick, and of the richest and most sugary flavor. Per pkt., 5	.15
Nutmeg. Fruit oval, good size, thickly netted; flesh light-green, rich, sweet, melt-	
ing, and highly perfumed; one of the finest. Per pkt., 5	.15
Pine Apple. Form roundish, inclining to oval; flesh green, melting, sweet, and per-	
fumed; early and productive. Per pkt., 5	.20
Skillman's Fine-netted. Resembles the Pine Apple; flesh green, sugary, and excel-	
lent; the earliest of all the green-fleshed varieties. Per pkt., 5	.20
Persian. Long oval, skin thin and delicate; extremely tender, rich, and sweet, and	
flows with a cool juice, which renders them very grateful. Per pkt., 10	.30
Large Yellow Cantelope. Oval; good-sized; skin yellow, marbled with green;	
flesh salmon-colored, sweet, highly perfumed, good flavor. Per pkt., 5.	.15
Large Musk. Long oval, deeply ribbed: flesh very thick, yellow, sweet, and juicy,	
with musky flavor; very early and productive. Per pkt., 5	.15
New White Japan. Decidedly the sweetest thin-skinned of the Musk Melon; color	
of fruit cream-white; flesh thick. Per pkt., 10	.25
Beechwood, Trentham Hall, Carter's Excelsior, and Scarlet Gem. All	
fine varieties for forcing. Per pkt., 25.	

### WATER-MELON (CUCURBITA CITRULLUS).

German, Wassermelone. - French, Melon d' Eaw - Spanish, Sandia.

The Water-melon is purely a tropical fruit, greatly appreciated for its refreshing  ${\it coolness}$  and delicious flavor.

MOUNTAIN-SWEET WATER-MELON.

Culture. Same as Musk varieties. per oz	z.
Mountain Sweet. A large, long, oval variety; skin striped and marbled; flesh scarlet, solid to the centre; very sweet and delicious. Per pkt., 5	5
Mountain Sprout, or Long Carolina. Resembling the preceding. A favorite market sort. Very fine quality, and productive. Per pkt., 5	20
Black Spanish. Form oblong; size large; skin very dark or blackish green; flesh deep-red, fine-grained, very sugary, and productive. Per pkt., 5	20
Ice-cream. A very large pale-green sort; form nearly round; flesh white, very sweet, tender, and of remarkably fine flavor. Per pkt., 10	20
Orange. Form oval, of medium size; flesh red, tender, sweet, and of good quality.  When in its mature state, the rind separates readily from the flesh, in the manner of the peel from the flesh of an orange. Per pkt., 10	50
Citron. Employed in making sweetmeats and preserves; form round, medium size;	15
Apple-pie Melon. A new Japanese variety; an excellent substitute for apples, when stewed, and made into pies; keeps until May. Per pkt., 10	20
Apple-seeded. A small, nearly round sort; derives its name from its peculiar seeds.  Flesh red to the centre, sweet, tender, and well-flavored. Per pkt., 10	10
Persian Water. Introduced by the celebrated Bayard Taylor, brought by him from the Caspian Sea. It is globular in form, of pale-green color, with dark stripes; flesh crimson, and remarkably firm texture, with only half an inch of rind; it can be taken off the vine to ripen, and will keep till winter. Very large size. Per pkt., .25.	

#### MUSTARD (SINAPIS VAR).

#### German, Seuf. - French, Moutard. - Spanish, Mostaza.

Mustard-seed is too widely known and appreciated to need description. It is useful both in its natural state and manufactured, and is considered wholesome in all its various methods of preparation. It is very refreshing when in its green state, mixed with salads, and for that purpose alone is worthy of cultivation.

Culture. — This salad is cultivated in the same manner as recommended for Cress.

### OKRA, OR GOMBO (HIBISCUS ESCULENTUS).

German, Essbarer Hibiscus. — French, Gombo. — Spanish, Quibombo.

This plant is cultivated to some extent as a vegetable: served in the same manner as

Asparagus. The green seed-pods are used in soups, and deemed a luxury. It is becoming very popular since its introduction to us from the West Indies.

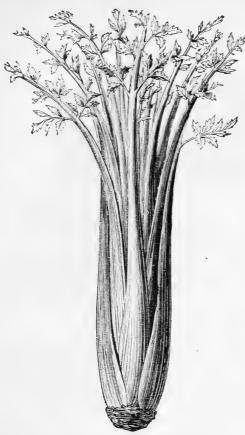

Culture. The seeds are sown thinly, on dry, warm soil, in shallow drills two feet apart, about the same as the Lima Bean. Cover the seeds lightly. After the plants are up, thin them out to nine inches apart, hoe freely, and draw a little earth to the stems as they continue to grow the read when quite group and about an inch and a half large. tinue to grow. Gather the pods when quite green, and about an inch and a half long.

per oz. Improved Long Green. Pods long and ribbed. Per pkt., 5 . .10

### ONION (ALLIUM CEPA).

German, Zwyebel. - French, Ognon. - Spanish, Cebolla.

No vegetable is more extensively known and cultivated than the Onion. It has been the common seasoning for soups and meats of all nations from the earliest period to the present.

SANDRINGHAM DWARF WHITE CELERY.

The variety grown for the use of H. R. H. the Prince of Wales.

See page 115.

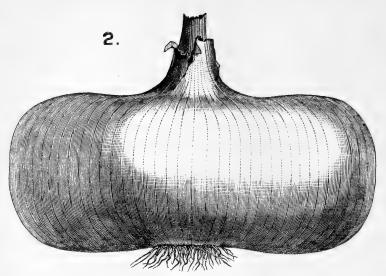

wood's frame radish. See page 116.

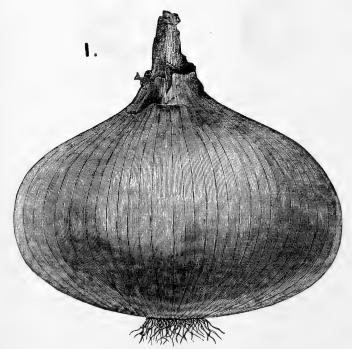

LONDON PARTICULAR SCARLET SHORT-TOP RADISH. See page 116.

LARGE FLAT WHITE ITALIAN TRIPOLI ONION.

LARGE BLOOD-RED TRIPOLI ONION.

Specimens of these onions were sent us by Messrs. Carter & Co., of London, England, and were exhibited by us at the Massachusetts Horticultural Society, receiving first-class certificates of merit; they were also exhibited at the New-England fair at Lowell, receiving much attention. Weight of specimens exhibited, from 2 lbs. 6 oz. to 2 lbs. 11 oz. Further description, see page 116.

Culture. The soil in general cannot be too rich for this vegetable; and, however good it may be, it requires more or less manure for every crop. Previous to sowing, the ground should be thoroughly spaded over, or deeply ploughed, and the surface made smooth and even. The seed should be sown as early in spring as the soil may be in good working condition. Sow in drills fourteen inches apart, and half an inch in depth. When the plants are three or four inches high, thin them out to two inches apart.

To grow Onions for pickling, sow the seed thinly in March or April. No further culture is required, except hand-weeding, as their thickness in the bed will prevent their growing

large, and will cause them to come to maturity sooner.	_
per	OZ.
Early Red. A sub-variety of the Large Red Wethersfield, and the earliest of the	
Red Onions. Very productive. Per pkt., 10	.25
Large Red Wethersfield. Large, skin deep purplish-red; flesh purplish-white; fine grained, and stronger flavored than that of the yellow and earlier red	
varieties. Productive, and one of the best to keep. Per pkt., 10	.20
Danvers Yellow. A fine variety; above the medium size; globular in form; skin yellowish-brown; flesh white, sugary, mild, and well-flavored. Very pro-	
ductive. Per pkt., 10	.25
Yellow Dutch, or Silver-skin. One of the oldest varieties; flesh white, fine-	
grained, mild, sugary, and well-flavored. Per pkt., 10	.25
White Portugal, or Spanish. A very large, flat onion. Skin loose, of a mild	
flavor; fine for early winter use, but decays early. Per pkt., 10	.30
Red Sallon. Shape and size resembles the Madeira; color is of a darker red; it has	
a stronger onion-flavor, and keeps better; fine variety. Per pkt., 25.	

YELLOW DUTCH ONION.

### PARSLEY (APIUM PETROSELINUM).

German, Petersilie. — French, Persil. — Spanish, Peregil.

The garden Parsley is a very useful and pleasant vegetable. Its seasoning flavor for soups and stews is very agreeable to many. It may be preserved by drying it till crisp, in summer; then rub it fine between the hands, and put in bottles for winter use.

Culture. Sow it in drills half an inch deep, early in April. When the plants are three or four inches high, thin them to six inches apart; to keep a young stock constantly for use, cut down about a third part at a time. Keep it only from severe frost. For this object, select a warm spot of ground, light and rich; sow it early in the season; cut them all over in September; surround the bed, early in November, with boards, and cover with mats or shutters; glass is much better, if it can be obtained.

per oz.
Plain Parsley. The leaves of this sort are plain, or not curled; but it is better fla-
vored than the curled for soups, &c. Per pkt., 5
Curled, or Double. A fine dwarf variety, tender; beautifully crimped and curled.
Fine for garnishing dishes for the table. Per pkt., 10
Dickson Extra, or Triple-curled. A new and fine English variety. Per pkt., 25. 1.00

### PARSNIP (PASTINACA SATIVA).

German, Pastinake. - French, Panais. - Spanish, Pastinaca.

The Parsnip is a biennial plant, similar to the Onion, Turnip, and Carrot in duration. It is both wholesome and nourishing, and desirable for winter and spring use.

Culture. Same as Carrot. Scatter the seeds thinly, and cover evenly with the rake.

Per oz.

.40

.40

.50

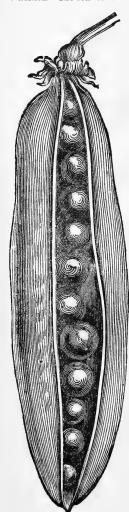

Hollow Crown. Roots oblong, ending somewhat abruptly with a small tap-root; grows mostly below the surface. Best garden variety. Per pkt., 5 . .15

### PEAS (PISUM SATIVUM).

German, Erbse. - French, Pois. - Spanish, Guizante.

The Pea is a hardy annual plant, of great antiquity as a culinary vegetable, and is familiar in the domestic cookery of every country.

Culture. — Peas, for an early crop, should be sown as soon as the ground is in working condition. The soil for their reception should be light, dry, and well sheltered. Mild manure, such as leaf-mould, has a beneficial effect. For gene-

LAXTON LONG-POD PEA.

eception should be light, dry, and well sheltered. Mild manure, such as leaf-mould, has a beneficial effect. For general crops, the ground should be well manured the previous year, which causes them to yield more abundantly. They are usually planted in double rows three or four feet apart, and covered to the depth of two and a half or three inches. The height of the Pea depends much upon the moisture and richness of the ground. The method of planting Peas in the hills with Potatoes of an early variety has been found successful. In dry weather, soak the Peas a few hours before planting. Pour water into the drills, when the ground is dry, before sowing the seed, which will cause them to grow at once, should the season continue dry. Peas ordered by mail are subject to an extra charge of eight cents per pin, for postage.

eleven and twelve peas in a pod; and they were pronounced by several eminent members of the London seed-trade to be an exceedingly fine variety. For a second early pea, there is no pea of a similar class in cultivation to equal it; and we feel every confidence that it will be in general cultivation in a very few years. The same habit and character as Dixson's Favorite, excepting that the pods are nearly double the size.

Laxton's Supreme. A variety raised from Laxton's Prolific crossed with Little Gem. The plant grows about 3½ feet in height, and is quite as early as Daniel O'Rourke, a great advantage in a Pea of such high-class quality.

The editor of "The Gardener's Chronicle"

says it is "a grand Pea: the sample sent exhibited remarkably fine large full pods." The Royal Horticultural Society of England describe this as "a grand Pea, a Green Marrow of excellent quality, with very long well-filled curved pods." Per pkt., 15

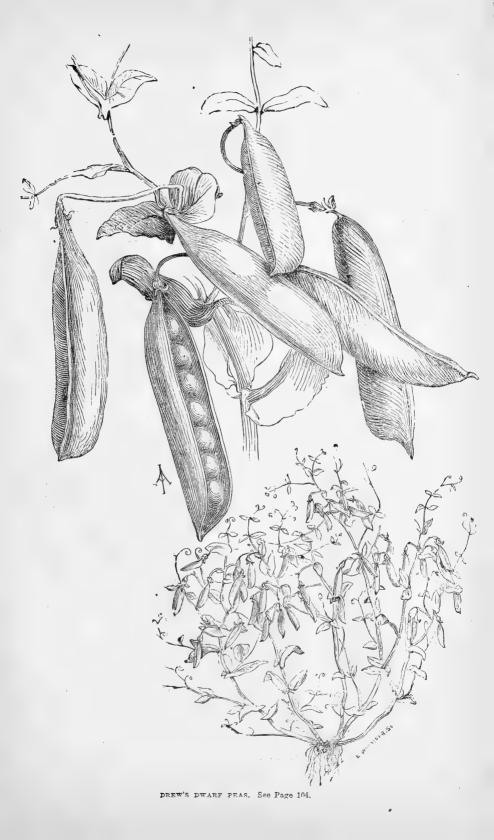

Imperial Wonder Pea. A fine large wrinkled variety; habit resembling Veitch's Perfection, but coming in three weeks later. Per pkt., 25. 1.00

Carter's First Crop, or Sutton's Ringleader. It has proved to be the earliest Pea grown; also very prolific; height 2½ ft.

Early Dillestone. This is undoubtedly one of the earliest Peas known; seven or eight days earlier than the Dan O'Rourke; fine flavor; good size, and one of the best.

Drew's New Dwarf. Remarkable for its dwarf and branching growth, forming a bush one foot high, and one foot broad; consequently, only about one plant to each foot of row is required. It is medium in earliness, and extremely productive per pkt., 25.

Peas per pkt., 10 cents, except those quoted higher.

ROYAL SUMMER CABBAGE LETTUCE. See Page 100.

BOSTON CURLED LETTUCE. See Page 100.

SECTION OF TROPHY TOMATO. See Page 121.

McLean's Little Gem. A dwarf, prolific, green wrinkled Marrow; habit similar
to Beck's Gem or Tom Thumb, and is a first early; height one foot50  McLean's Advancer. A dwarf green wrinkled Marrow; fine flavor; long pods,
well filled; prolific; nearly as early as the Dan O'Rourke
McLean's Princess Royal. A very prolific, long-podded, early variety, of fine sugary flavor; one foot high; pods large, well filled; very productive30  McLean's Prolific. A dwarf early variety, coming in after the Dan O'Rourke;
white wrinkled, with the Marrow flavor
large peas, in well-filled pods, and plenty of them
McLean's Wonderful. The best dwarf late Pea in cultivation; large, well-filled pods, fine, sugary flavor, and great productiveness. 2 feet
Caractacus. A valuable early variety
inches; stout and branching; pods about two and a half inches in length, containing five or six peas, of a creamy yellow; fine flavor; productive50
Alliance, or Eugenie. Pods single or in pairs, three inches long, containing five or six peas. When ripe, the peas are of medium size, cream-colored, and much shrivelled and indented
Champion of England. A standard sort, considered by all to be the best grown
for general crop; of delicious flavor; very productive. 3 to 4 feet40 Champion of Scotland. This we consider one of the best for main crop; of rich,
buttery flavor; very productive, and of large size
yields abundantly; of good quality and size
Black Eye Marrowfat. An excellent variety, growing about three feet high; pods large and full; a prolific bearer, and can be recommended as one of the best of the Marrowfat varieties
Victoria Marrowfat. A fine late variety; sweet, and of rich Marrowfat flavor;
very prolific; 3 to 5 feet  Dwarf Marrowfat. A very early sort, with large full pods; rich flavor; very pro-
ductive. 2 feet
Sugar Pea. Eatable pods or string-pea. 3 feet
Dwarf Waterloo, Late Branching Marrow. A dwarf variety of tall Royal Victoria or Waterloo Marrow; of Tom-Thumb habit; height, fifteen inches: the most valuable dwarf Pea for general and late cropping ever
offered; good flavor, and productive.  Dickson's First and Best. A new English variety, remarkably productive, and
recommended as one of the very earliest peas in England
PEPPER (CAPSICUM).
German, Pfeffer. — French, Piment. — Spanish, Pimiento.  Capsicum, or Pepper, is a tender annual, much esteemed for its seasoning qualities. It
imparts vitality and promotes digestion. It is extensively used for pickling.
Culture. — The plants are always propagated from seed. Sow in a hotbed, early in April, in shallow drills six inches apart, and transplant to the open ground when summer weather has commenced. The plants should be set in warm mellow soil, in rows sixteen
inches apart, and about the same distance apart in the rows. When all danger from frost
is past, and the soil is warm, and settled, sow the seeds in the open ground, in drills three-fourths of an inch deep, and fourteen inches apart; and, while growing, thin out the plants
to ten inches apart in the rows.
Cayenne. The pods of this variety are quite small, cone-shaped, coral red when ripe, intensely acrid, and furnish the cayenne pepper of commerce. Per pkt., 10 1.00
Cherry. The pods or fruit erect, nearly globular or cherry form; of a deep rich, glossy, scarlet color, remarkable for its intense piquancy. Per pkt., 1040
Squash. Fruit compressed, more or less ribbed; skin smooth and glossy; flesh thick,
mild and pleasant to the taste; the best for pickling alone. Per pkt., 10 .50  Sweet Mountain, or Mammoth. Similar to the preceding in form and color, but much larger; fine for pickling. Per pkt., 10
Sweet Spanish. Though one of the largest, it is also one of the earliest; flesh sweet, mild and pleasant: used for salads and nickling. Per pkt. 10.

Long Red Arabian. Very pretty; fruits upright, smaller than the ancient varieties; produced in greater quantity, and more pleasing shape. Per pkt., 10
PUMPKIN (CUCURBITA PEPO).  German, Kurbis. — French, Courge. — Spanish, Calabaza.  We cannot think of admitting this vegetable into the precincts of a garden where ther are Cucumbers, Melons, and others of similar class. It would mix with and contaminat the quality of the more valuable sorts; besides, they would occupy more space than most could allow, as many of the varieties attain enormous size.  Culture. Same as Squash.  Cheese, Medium-sized. One of the best for cooking purposes. Per pkt., 5
German, Kurbis. — French, Courge. — Spanish, Calabaza.  We cannot think of admitting this vegetable into the precincts of a garden where ther are Cucumbers, Melons, and others of similar class. It would mix with and contaminat the quality of the more valuable sorts; besides, they would occupy more space than most could allow, as many of the varieties attain enormous size.  Culture. Same as Squash.  Per occupance. Per pkt., 5

Cheese, Medium-sized. One of the best for cooking purposes. Per pkt., 5
Mammoth. A very large, coarse-growing variety. Per pkt., 10
RADISH (RHAPHANUS SATIVUS).
German, Rettig Radies. — French, Radis, Rave, Petite Rave. — Spanish, Rabano.
The Radish is a hardy annual plant, much esteemed for its grateful relish, and is exter sively cultivated for its roots. Its excellence consists in being succulent, mild. crisp, an tender; and the roots should be eaten before they are overgrown, which makes the tough. The seed-pods are excellent for pickling if gathered while young and green.
Culture. For early crops, sow in spring, as soon as the ground can be worked, in light rich soil; for later crops, a deep, moist soil is preferable. Sow the seed thinly in drills, covering them with about a quarter of an inch of earth. For early use, sow on gentle hotbed
Early Short-top Long Scarlet. Roots long, growing partly out of the ground, of a beautiful deep pink color; flesh white, transparent, crisp, and of good flavor. Standard sort for marketing or private use. Per pkt., 5
white Turnip. Bulb similar to the preceding. Skin white; flesh white and semi-transparent. Some days later than the scarlet. Per pkt., 5
Scarlet Olive-shaped. In the form of an olive. Skin fine scarlet; neck small; flesh rose-colored, tender, and excellent; well adapted for forcing. Per pkt., 5.1  Black Spanish. One of the latest of the Radishes, and is considered an excellent
sort for winter use. Large size; color black; of firm texture. Per pkt., 5 .1  Rose-colored China Winter. Size medium; skin comparatively fine, and of a bright rose-color; flesh firm, rather piquant. Late variety. Per pkt., 10 .2
New French Breakfast. A new quick-growing variety. Oval form; color scarlet,
tipped with white; fine flavored; excellent for forcing. Per pkt., 10
**Raphanus Caudatus," or Edible Podded Radish. This valuable new vegetable belongs to the Radish tribe; but, unlike that esculent, the seedpods (not the root) are eaten: these are very curious, attaining an immense size in a wonderfully short time, sometimes growing as much as three inches in a night. This vegetable can be used in various ways; indeed, it may be regarded as one of the most useful that have been introduced for many years. Producing extraordinary siliquas (pods), which are very remarkable from their attaining the enormous length of about two feet. These pods have a most agreeable flavor, and when about half-grown can be eaten in the same way as roots of the common Radish, which they greatly resemble in taste, but are far superior in delicacy of flavor. In salads they will be highly estimated; for, added to their other merits, they possess the excellent advantage of being easily digested; they also make a good pickle, for which purpose they are well adapted. It is, however, when the pods are bouled that they are most delicious, eating like marrow, and having a most delicate flavor; they should be served on toast, and will form a most agreeable addition and novelty for the table. Per pkt., 10

### RHUBARB (RHEUM HYBRIDUM).

German, Rhubarber. - French, Rhubarbe. - Spanish, Ruibarbo Bastardo.

Culture. Rhubarb succeeds best in deep, somewhat retentive soil. The richer its condition, and the deeper it is stirred, the better. Sow in drills an inch deep. Thin out to six inches apart. In the fall, trench a piece of ground, and manure it well; then transplant the young plants into it three feet apart each way. Cover with leaves or litter the first winter, and give a dressing of coarse manure every fall.

			per	OZ.
Victoria.	A large variety; one of the best for general use. Per pkt., 5		٠.	.25
Linnæus.	Large, tender, and fine-flavored. Per pkt., 5			.25

### SALSIFY, or OYSTER PLANT (TRAGOPOGON PORRIFOLIUS).

German, Bocksbart. - French, Salsifis. - Spanish, Ostra vegetal.

The Salsify is a hardy biennial plant, and is principally cultivated for its roots, which are long and tapering, and when grown in good soil, measure twelve or fourteen inches in length. It is considered wholesome and nutritious. When cooked, the flavor resembles that of the oyster, and is a good substitute for it: whence the popular name.

Culture	and	treatm	ent sim	ilar to	Parsnip	).				per	OZ.
Salsify, or	г Оу	ster P	lant.	Per p	kt., 10						.25

### SCORZONERA, or BLACK SALSIFY (SCORZONERA HISPANICA).

German, Schwarzwurzel. - French, Scorzonere. - Spanish, Escorzonera.

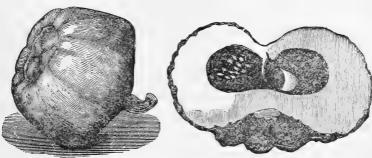

Scorzonera, or Black Salsify. Cultivated like the common Oyster Plant, which it much resembles in its mode of growth. It is also prepared for the table in the same manner. Per pkt., 10

### SPINACH (SPINACIA OLERACEA).

German, Spinat. - French, Epinard. - Spanish, Espinaca.

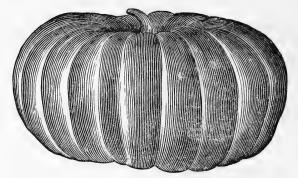

Spinach is very hardy, and consequently a very important vegetable for cold climates. It is extremely wholesome and palatable.

Culture. Spinach is best developed and most tender when grown in rich soil. It should be heavily manured and deeply trenched. Sow early in March for summer crop, in drills, which method renders the cultivation and the gathering of the produce more convenient. Encourage the growth with frequent hoeing, which draws the moisture to the roots. For a succession, a few seeds of the summer varieties may be sown, at intervals of a fortnight, from April to August. Sow from the middle of August to the beginning of September, for the winter crop, in a light sandy soil, on raised beds, which enables it better to stand the severe frost. Thin the plants as soon as they are strong enough to draw, leaving them about nine inches apart in the row. Two ounces of seed will plant five drills, each forty feet long.

TURBAN SQUASH.

YOKAHAMA SQUASH.

MAMMOTH PRIZE SQUASH. - Weight 180.

### SQUASH (CUCURBITA MELO PEPO).

German, Kurbiss. - French, Courge. - Spanish, Calabasa tontanera.

The several varieties of the Squash are very useful in this and other warm climates, as they can be grown to perfection in the summer. It is in general use from June to August, and the late varieties the whole winter until May. It is extensively cultivated in this vicinity for the market.

Culture. Any good enriched soil is adapted to the growth of the Squash. They only thrive well in a warm temperature, as all the varieties are tender annuals; and the seed should not be sown in spring until all danger from frost is past, and the ground is warm and thoroughly settled. The hills should be made from eight to ten inches in depth, manured well, and the seeds covered about three-fourths of an inch deep. Keep the earth about the plants loose and clean, removing the surplus vines from time to time, allowing not more than three plants to a hill. The custom of cutting or nipping off the leading shoots of the running varieties is now practised to some extent, with the impression that it both facilitates the formation of fruitful laterals and the early maturing of the fruit.

Early Yellow Bush Scalloped. An early, flat, scallop-shaped sort; color yellow; flesh pale yellow, fine-grained, and well-flavored; productive. Per pkt., 5 . .10

Early White Bush Scalloped. A sub-variety of the Yellow Bush. Per pkt., 5 . .10

Early Summer Bush Crookneck. Generally esteemed as one of the finest of the summer varieties; color bright yellow; skin very warty, thin, and easily broken; flesh dry and well-flavored. Per pkt., 5 . . . . . .10

Boston Marrow. Form ovate; skin thin; when ripe, bright orange; flesh rich salmon-yellow, very dry, fine-grained, and for sweetness and excellence unsurpassed; a fall and winter variety. Per pkt., 5 . . . . . .15

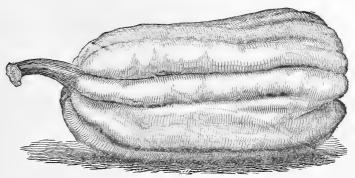

HUBBARD SQUASH.

CANADA CROOKNECK SQUASH.

ookneck. A small variety of the preceding; ripens early, and, all things considered, is one of the best for general cultivation. Per pkt., 10 .20 Canada Crookneck. Valparaiso, or Lima Coccanut. A large-growing winter variety; a good variety for fall and winter use. Per pkt., 5. -20

CUSTARD SQUASH.

Custard. Skin or shell creamy-white; flesh pale yellow, not remarkable for solidity .20 weighing one hundred and eighty pounds, - a monster. Per pkt., 25. Turban, or Turk's Cap. A superior late-growing variety; of a greenish color, striped with white, and thus in form and color somewhat resembling a turban, whence the name; flesh orange-yellow, thick, fine-grained, sugary, and well-flavored. Per pkt., 10 .30 Yokohama. A new variety from Japan; finest grained of all the Squashes, with a rich Marrow flavor. Per pkt., 15 .30 Lungren. The leaves are singularly variegated with yellow, the depths of color vary-

ing in different plants from pale yellow to bright orange, and differing also in the amount of variegations as the season progresses. The color is most profuse at the base of the leaf, and is distributed thence in serrated stripes, towards, but not reaching, the borders. The fruit is bottled-formed, much resembling the "Puritan;" entirely

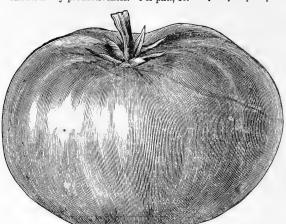

white, about one foot in length, eight inches in its greatest diameter, and weighs from eight to ten pounds. The stem is thick, short, and fleshy. The flesh is pale yellowish-white, thick, fine-grained, dry, and sweet, and peculiarly free from the strong flavor common to many varieties. It cooks well, early or late in the season, and even before it has attained its full size, and is also a good keeper. Per pkt., 25.

### SUNFLOWER.

New Mammoth Russian. This is a new variety; and, under ordinary cultivation, the heads grow to the enormous size of twenty inches in diameter. The

seeds are large, exhibited at the Massachusetts Horticultural Exhibition, and highly commended by the Committee for ornamental purposes. For planting in shrubberies, it is a desirable acquisition. Salad oil of superior quality is extracted from it. To poultry-keepers it is invaluable for its extraordinary productiveness. Per pkt., 10.

.25

GENERAL GRANT TOMATO.

### TOMATO (SOLANUM LYCOPERSICUM).

German, Liebesapfel. - French, Tomate. - Spanish, Tomate.

There is no vegetable on the catalogue that has obtained such popularity in so short a time as the one now under consideration.

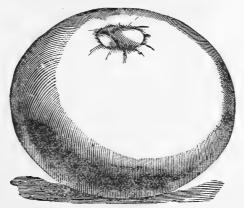

Culture. The Tomato is raised from seeds, which should be sown in a hotbed in March, or in pots in a warm window. They should be started as early and forwarded as rapidly as possible, whether by hotbed or open-air culture. When about two inches high, they should be transplanted, in single plants, to warm, light, rich soil. Water freely at the time of transplanting. Shelter from the sun for a few days, or until they are well established. If sown in the open ground, select a sheltered situation, pulverize the soil finely, and sow in drills. This may be done the last of March or first of April. When the plants are three or four inches high, transplant to where they are to remain, as before directed.

The Unrivalled Prize, "General Grant." Size above the medium, three to four inches in diameter, growing in clusters; form round, slightly flattened, very regular, symmetrical, and rarely ribbed or wrinkled; color brilliant glossy crimson; flesh unusually firm, solid, and free from water, weighing from ten to twenty pounds more per bushel than other varieties; skin remarkably fine, smooth, and shining, coloring well up to the stem,—a quality very desirable to those preparing them for the table; very productive, and of the finest flavor; bears carriage well, and keeps in good condition a long time after being gathered, retaining its goodness, and free from wilting. It will be found to ripen uniformly, and as early as, if not earlier than, other varieties. Per pkt., 10.

Keyes's Early Prolific. Leaves large, long, and quite entire, not lobed as in other kinds; and the growth is dwarf, compact, vigorous, and strong; medium size, round, of brilliant color, quite smooth, and free from wrinkles of any kind, perfectly solid, and of excellent flavor. Per pkt., 10

Maupay's Superior. The fruit is of a beautiful deep-red color. In form it is round, slightly flattened, and without a crease or wrinkle. Smoothness of the surface is not only one of its most remarkable, but one of its most desirable characteristics. This freedom from creases or wrinkles prevents the great waste usual with almost every other variety. It is of a medium size, and the flesh almost as solid as a beefsteak. One bushel will make as

	r oz.
much catsup, or fill as many cans, as two bushels of the ordinary kind,	
besides being possessed of a flavor that is unapproachable. Per pkt., .10	.40
Tilden's. It is the earliest of all the large-growing Tomatoes. The fruit varies from	
round to roundish-oval, which is the general form of the main crop, and	
is free from the warty protuberances which disfigure ordinary sorts. Col-	
or, light brilliant scarlet, with a glossy skin; flesh solid, light red, less	
watery than other kinds, and of good flavor. Per pkt., 10	.30
Tree, or Erect. Fruit very large and smooth; and the plants, from their erect, com-	
pact growth, highly ornamental. Per pkt., 10	1.50
Large Smooth Red. Fruit somewhat flattened, inclining to globular, medium size.	
skin deep rich crimson; flesh bright pink or rose color. Per pkt., 5	.25
Lester's Perfected. Of recent introduction; regular form; large size; flesh firm	
and well-flavored. Per pkt., 10.	.40
Large Red. A very early variety, of large size; skin bright-red; flesh pink or rose	.10
color. Per pkt., 5	.25
	.40
Large Yellow. Clear, semi-transparent, yellow skin and yellow flesh; little used	0.0
except for preserving and pickles. Per pkt., 5.	.30
Grape. A quite small red variety, growing in long clusters, like grapes, and useful for preserves; a new variety. Per pkt., 10	
	.50
Early York. Very early; of good size, productive, and fine flavor. Per pkt., 10.	.40
Cook's Favorite. Medium size, oval form, fair skin, deep crimson, productive, and	
excellent flavor; one of the best for general cultivation. Per pkt., 10 .	.40
Strawberry, or Ground Cherry (Physalis Alkekengi). This, though called a To-	
mato, is a distinct species; excellent for preserves, having a peculiar	
delicate strawberry flavor. Per pkt., 10	,50

MAUPAY'S SUPERIOR TOMATO.

### TURNIP (BRASSICA RAPA).

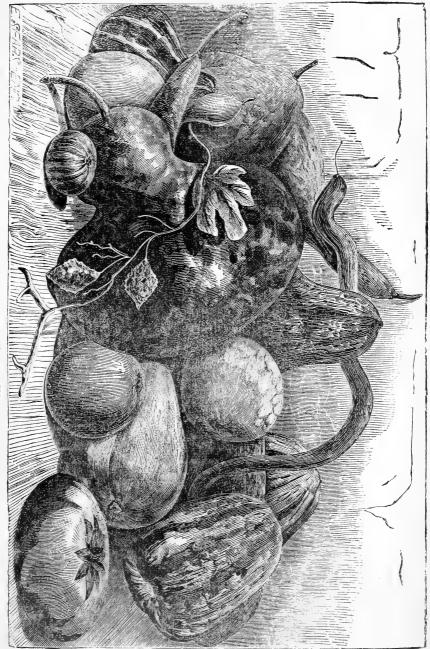

German, Steckrube. - French, Navet. - Spanish, Nabo comun.

This is a wholesome and useful plant both for man and beast, and highly deserving of cultivation. It has become in some countries an extensive field-crop.

Culture. Sow as early as the ground will allow, in drills fourteen inches apart and half an inch in depth. The young plants should be thinned to five or six inches asunder. When the bottoms begin to enlarge, remove the earth gently to the depth of an inch and a half, and apply wood-ashes. The sowing for the winter's supply is made in August. One thing must be observed,—to have the ground always fresh dug before sowing. per oz.

Early White Flat Dutch, or Spring Turnip. Size medium; of quick growth, juicy, and of excellent quality. Per pkt., 5

<b>T</b>		Per oz.
Purple-top, Strap Leaf. Similar to the best for spring or fall so		
grained, and rich and butter	ry flavored. Per pkt., 5.	
Yellow Malta. Symmetrical, small-l	bulbed, early variety; skin	smooth, bright or-
ange; flesh pale yellow, fin Yellow Aberdeen. A hardy and produced

# NEW AND RARE VARIETIES OF VEGETABLE SEEDS.

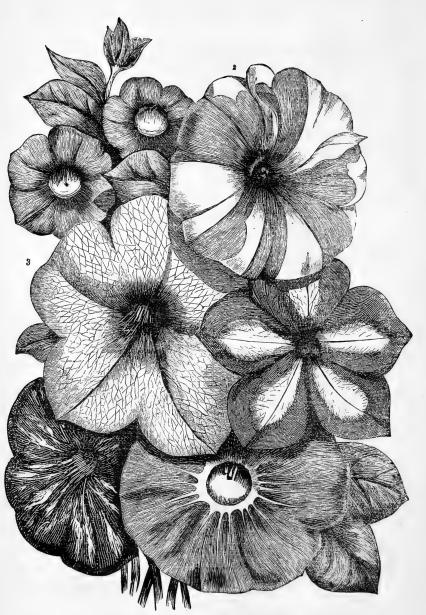

The following kinds we wish to call attention to as desirable: —	pk
ASPARAGUS, Moore's Premium. This variety is now well known in Boston and vicinity as the largest and finest in every respect, without exception, in cultivation. Capt. Moore has taken first prizes for his celebrated Asparagus every season for the past ten years, at the Exhibition of the Massachusetts Horticultural Society; and, on the second Saturday in June, 1870, exhibited a bunch of twelve stalks, weighing three pounds five ounces. On same day, there was exhibited a bunch of Conover's Colossal, from New York, of eighteen stalks, weighing three pounds eight ounces (only three ounces more), and having six more stalks in bunch, showing the superiority of Moore's compared with Conover's. Per oz. 50 cts.	.2
BEETS, Egyptian. Very fine. See page 89.	
— Hatch's Early Extra Blood-Turnip. This is an improved variety, both in earliness, smoothness, and fine quality for table use, and is a favorite with the growers of fine early vegetables for the Boston market. The seed we offer is from the stock which received the first premium awarded by the Massachusetts Horticultural Society for beets, exhibited on or before the first Saturday in July. Per lb., \$1.50; per oz., 20 cts.	.1
- Dewing's Early Turnip. This is a new and superior blood beet, recently	
introduced. The roots are of a fine globular shape, uniformly smooth, with long, slender tap-root. Skin dark purplish black; flesh deep blood-red; very fine grained, tender, and sugary; very early. Excellent for the table. Per lb., \$1.50; per oz., 15 cts.	.1
- New Chilian (for decorative purposes). This striking novelty is specially	
adapted for bedding purposes, the foliage presenting a variety of color, from bright orange to purplish crimson; used extensively at the Battersea and other Metropolitan Parks	.2
— Carter's Perfection Salad. Small-sized, short-top variety, of delicate texture, and sweet flavor, even growth, and dark foliage. The best variety for salad purposes	.2
— The Perfection. For flower-garden decoration or for salad. The root is of medium size, rich color, and fine flavor. The foliage is shining black, of dwarf, even, and regular habit; and, unlike other beets, the leaves show their dark color from the seed-leaf; therefore any one using this beet for the flower-garden can create a handsome effect, superior in many ways to Perilla mankinessis; but it should be borne in mind that other beets, although of dark foliage, are not adapted for flower-garden decoration, either from the coarse appearance of the foliage, or from the fact of the foliage not presenting the desired color until the leaves have arrived at maturity. See cut.	.2
BEANS, Australian Runners. This variety, introduced by Mr. Jos. Tailby,	
has proved remarkably productive, and given the best of satisfaction. The pods are from nine to twelve inches in length, and about one inch in breadth. Very early, coming in with the early six weeks, stringless and when cooked very delicious. Price per pkt., 25 cts; per qt., \$1.00.	
The following communication has been received:—	
Parker House, Boston, Dec. 20, 1871.	
We have used at our house the "Australian Runner Bean," grown by Mr. Joseph Tai by of Wellesley, and consider it the best string bean for culinary purposes that we have ever met. We take great pleasure in recommending it for general use.  (Signed). PARKER & MILLS. Proprietors of Parker House.	
(Signed). PARKER & MILLS. Proprietors of Parker House.  — Giant Wax. See page 88.	
T	

CABBAGE, Early Wyman. If his we can recommend as the finest early Cabbage grown. See page 91.	
— Fottler's Improved. See page 92.	
- Early Jersey Wakefield. A standard early cabbage in the Boston and New-	
York markets. Grows to a good size solid, and is one of the best early	
varieties for shipping. Our stock of this variety was grown with great	
care. Per oz., \$1.00	.15
- Robinson's Champion Drumhead. The largest in cultivation; have been	
exhibited in Europe weighing seventy-four lbs. See cut. Per oz., 50	.25
CAULIFLOWER, Boston Market. Pierce's stock. Very choice. See page 93.	
Erfurt Earliest Dwarf. The earliest variety in cultivation; very dwarf, with solid, pure white heads, and of superior quality; one of the surest to head. Seed very scarce. Per oz., \$6.00.	.50
CELERY, Sandringham. A variety raised by Mr. Carmichael (Superintendent of the Prince of Wales's Gardens), from the well-known Sandringham Celery, and from whom we have received the stock. We believe that this is the only sort of celery now used at the royal table. Mr. Carmichael informs us, from the unusually dwarf and solid habit of this variety, that the usual method of growing celeries by earthing up may be done away with, as he grows it on the surface of the ground, without in any way reducing the quality of the celery.	.25
Boston Market. Crosby's Stock. Very fine. See page 95.	.20
CORN Magreta Forly Concord Strugg Man A Man Day This releable	
CORN, Moore's Early Concord. SILVER MEDAL AWARDED. This valuable variety of Corn which we had the pleasure last season of introducing, we now bring before the public with renewed confidence. It has proved all and more than we recommended. We have received hundreds of testimonials, which will be found in a circular, to be had on application.	
For prices, see page 96.	
EGG-PLANT, Pekin. Fine. See page 98.	
KAIL, Acme. A very dwarf curled Kail, growing close on the ground, with glaucous green leaves intersected by a scarlet mid-rib. Really a superb thing, and combines every desideratum, being very hardy, very early, prolific, tender, mild, and a brilliant green when boiled. It is a hybrid between Dwarf Green Curled Borecole and Sea Kail.	.25
LETTUCE, Bunney's Incomparable Hardy Green Cos. The raiser of this	
sys, "I have tried it with all the leading kinds of lettuce; but none are equal to it. You may grow it for any time of the year, as it is very hardy, and has stood the drought of the last season when other sorts	
'bolted.'" A compact, large-growing, crisp variety, of fine flavor	.25
MELON, Boston Market. (Musk.) We are pleased to inform customers that we now offer seeds of this celebrated melon. Our stock was grown expressly for us by Mr. Walter Russell of Arlington, whose melons have brought the highest prices in the market for some years. Persons wishing a fine melon will find this superior to any other in all respects, either for family or market purposes. Fruit nearly round, but flattened slightly at the ends, deeply, and very regularly ribbed; size medium; skin green, and thickly netted. When fully mature, the green becomes more soft and mellow, or of a yellowish shade. Flesh thick, very juicy, and of the	
richest and most sugary flavor. It is an abundant bearer, quite hardy,	_
and remarkably uniform in its quality. Per oz., 50 cts.  — Persian. (WATER.) Introduced by Bayard Taylor, Esq., the traveller. After	.15
a trial of two years, we can confidently recommend it as a most val- uable acquisition, particularly for the Middle and Southern States. It is globular and elliptical in form, of pale-green color, with dark stripes; flesh crimson, and of remarkably fine texture; delicious flavor, with only half an inch of rind. A peculiarity of this melon is, that it can be taken	.25
off the vine to ripen, and will keep till winter. It grows to a large size.  The Russian American. (Water). Raised also by Mr. Taylor; a hybrid between the above and the Mountain Sweet Melon. This is an extraordi-	.40
between the above and the Mountain Sweet Melon. This is an extraordinary hybrid, and entirely unsurpassed for size, delicious crispness of flesh, and sweetness of flavor. The Russian American ripens about three weeks later than the American varieties; has the narrowest possible rind, with a mass of crimson flesh five inches in diameter; invariably sweet and solid; and far surpasses all melons hitherto known	

WASHBURN & COMPANI'S.	. 1 4
<b>MELON, Mexican.</b> (WATER.) A delicious variety; very early, strong grower; fruit medium size, thin rind; flesh solid, pale salmon-color, very sweet.	.25
ONION, New Giant Rocca of Naples. Special certificate Royal Horticultural Society, Dec. 21, 1869; weight of bulb exhibited, three pounds nine ounces. A splendid variety of onion, of delicate flavor, large globular shape, and light-brown skin. Per oz., 50 ets.	.15
— Early White Naples. Special certificate Royal Horticultural Society, June 8, 1870, for three specimens; weight three pounds seven ounces. A distinct variety, of quick growth, and mild flavor; originally selected from the Red Italian Tripoli onion for its distinctive qualities of size, earliness, and beautiful silver skin. Per oz., 50 cts.	.15
— Large Italian Red Tripoli. Special certificate Royal Horticultural Society, Dec. 21, 1869; weight of bulbs exhibited, two pounds eleven ounces, and two pounds six ounces. This is a distinct variety from the ordinary Red Italian Tripoli Onion (Genoa seed) of commerce. It grows much larger, and is not so dark in the skin; the flavor is exceedingly fine and mild. Per oz., 50 cts.	.15
— Giant White Tripoli. Specimens of this magnificent onion were on view at the Royal Agricultural Society's Show at Oxford. Four of the heaviest roots turned the scale at nine pounds three ounces. Per oz., 50 cts.	.15
— New Neapolitan "Marzagole." We have this desirable novelty from the eminent raiser of the New Giant Rocca and other mammoth Onions recently introduced. He informs us that it is by far the earliest onion in cultivation. We are also informed, that, if sown in the autumn, this onion will come into use in the month of March	.25
PEA, Laxton's Alpha (THE EARLIEST WRINKLED PEA). This Pea, which was introduced by us in the spring of 1870, has fully justified the high opinion formed of it. Thoung growing from two and a half to three feet in an almost unexampled dry season, it yet turned in only three days later than First Crop or Ringleader, and the same time as Little Gem. It is a capital bearer, and in point of general usefulness ranks as A I. This season the pods were fit to gather some four days before those of Daniel	
O'Ronrke: no doubt it is fully as early as that variety, with the advantage of possessing a higher quality. \$1.50 per qt.	.25
ing a more robust habit. It is earlier than Daniel O'Rourke, twice as prolific as the Tom Thumb, and of much finer flavor  — Carter's First Crop Blue. This is the combined result of natural and artificial cultivation; selected from "Little Gem" and "Laxton's Supreme." It is a good bearer; pods large and of uniform size. Height twelve to	.25
fifteen inches. \$1.50 per qt	.25
at the Royal Horticultural Society's Show at Oxford last year. \$1.00 per qt.	.25
may be served in various ways, when they will be found a delicious addition to the dinner-table. \$1.50 per qt.  Hundred-Fold, or Cook's Favorite. A pea originated from "Laxton's	.25
— Hundred-Fold, or Cook's Favorite. A pea originated from "Laxton's Prolific" and "Ne plus ultra," with pods as large as "Supreme," of the fine dark-green color of "Ne plus ultra," and carrying a bloom like a cucumber; the peas cook a fine green color; the head is of a distinct, pale olive-green color. This pea will make a first-class variety to sow in succession with "Supreme." \$1.00 per qt.	25
PARSLEY, Champion Moss Curled. This Parsley is the perfection of a curled Parsley for garnishing purposes. We cannot recommend it too highly; it is not to be surpassed. Per oz., 25 cts.	10
RADISH, London Particular Long Scarlet. Per oz., 25 cts.	.10
- Wood's Early Frame. The finest long Radish for early cultivation. Per oz., 15 cts	.5

LUNGREN SQUASH. Sec Novelties.

PETUNIA GRANDIFLORA HYBRIDS. See No. 738.

**SQUASH, Lungren.** The leaves are singularly variegated with yellow, the depths of color varying in different plants from pale yellow to bright orange, and differing also in the amount of variegations as the season progresses. The color is most profuse at the base of the leaf, and is distributed thence in serrated stripes, towards, but not reaching, the borders.

serrated stripes, towards, but not reaching, the borders.

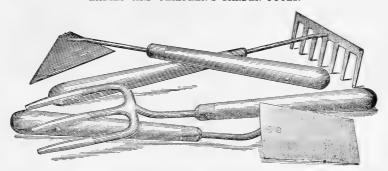

The fruit is bottle-formed, much resembling the "Puritan;" entirely white, about one foot in length, eight inches in its greatest diameter, and weighs from eight to ten pounds. The stem is thick, short, and fleshy. The flesh is pale yellowish white, thick, fine-grained, dry, and sweet, and peculiarly free from the strong flavor common to many varieties. It cooks well, early or late in the season, and even before it has attained its full size, and is also a good keeper. (See cut.)

— Moore's Vegetable Cream. The finest Summer Squash cultivated. When mature it is of a uniform pale yellow color. The skin or shell is very hard when perfectly ripened; flesh white, tender, and succulent, even till the seeds are ripe. It may be used in every stage of its growth; and, when perfectly ripened, will keep through the winter, if stored in a dry place.

TOMATO, "Gen. Grant." This Tomato, which we introduced, has, after another year, proved to be the best in all respects, — taking the first and second prizes at the Massachusetts Horticultural Society Exhibition, in competition with all the leading sorts. We have received numerous testimonials from all quarters; but from want of space we are obliged to omit publishing them. For further description, see page 110.

market. Attention was called to it by a friend, whose father, an amateur horticulturist, commenced, twenty-four years ago, the series of experiments by which he has brought it to its present superb condition. His first step was to cross the old crumpled large red tomato (which was very heavy, but so rough as to be worthless) with the watery early smooth red. This crossing was continued for several years, until he succeeded in putting the convoluted flesh of the one inside of the smooth skin of the other. In accomplishing this, he adhered as closely to a fixed line of action, and worked as scientifically for the attainment of a predetermined end, as did the originators of the famous short-horn breed of cattle. The end once accomplished, he has, during nearly twenty years, constantly selected a very few specimens of the best and best-flavored of the earliest fruit for the next year's seed; and now, when properly treated, the seed will with certainty reproduce the perfect type, — a tomato that has never yet been even remotely approached for excellence. Without wishing to detract from the fame of the popularly favorite tomatoes, all of which we have faithfully cultivated, we have no hesitation in saying that The Trophy is as far superior to the best of them as a herd of short-horn cattle is superior to the chance stock of an average farm. \$1.00 per oz.

### LADIES' AND CHILDREN'S GARDEN TOOLS.

Ladies' and Children's Garden Tools, useful, handy and small. Are liked very much by all who use them. Put up in neat boxes, 11 inches long by 3 wide. No. 1, extra polish, \$1.25; by mail \$2.00.

No. 2, painted and polished, \$1.00; by mail \$1.00; by mail \$1.75

.25

### RARE FLOWERS AND NOVELTIES

FOR 1871-2.

Particular care has been taken that the selection should be of the purest character. We cannot affirm the accuracy of the various descriptions, having tested but few of them; but the reputation of the growers from whom we import is to us the best assurance that satisfaction will surely follow. Our patrons wishing novelties will please send their orders early, as our stock of some of the varieties is limited.

earry, as our stock or some of the varieties is infinited.	1-4
1003 Asters, Shakspeare. This new Aster is said to be the finest of all the dwar sorts. Five inches high; densely formed; flowers very nomble, of the	e
brightest colors, and of a regular imbrica ed form. Its dwarf, compac and free-flowering habits make it very use'ul either for the garden or poi 1004 — New (La Superbe). Azure blue fothe b-autiful rose variety which wa:	s .25
in fact, the only one of this race, may be added this charming variet with azure-blue flowers. It cannot fail to meet the same general favor	
1005 — New cellular Victoria. Most charming novelty; in habit similar t	
the Victoria Aster; the petals, however, in tead of lying flat upon each	h
other, resemble so many tubes open at the ends, forming mall cell.  The particularly elegant appearance of the flowers is derived, in a great	
measure, from the symmetrical arrangement of the cells .	25
1006 — Mont Blanc. Fine improvement, belonging like the Victoria, to the Py	
ramidal Asters. Plants of luxuriant growth, about three feet high, covere with large, pure-white flowers five inches across, very double, and so di	
posed as to give to the plants the appearance of complete pyramids.	50
1007 Abronia Arenaria. Nice species, with clear, waxy-yellow, sweet-scenter	
flower; habit like A. umbellata.  1008 Amaranthus Bicolor ruber. Splendid bedding plant, with abundant for	25
liage of a bright fiery-red passing towards the summit to bright carm	i-
nate scarlet, and sometimes tipped with yellow Far superior to the ol	d
(A. bicolor). For flower-beds, there is, among the whole ornaments foliaged section, certainly not a finer and more striking plant to be ound	i25
1009 — Silicifolius. This plant is of pyramidal form, attaining a height of from	n a
two and a half to three feet, branching close to the ground, the lower	
branches being twelve to fifteen inches in length, and extending in a hor zontal position. The leaves, which are beautifully undulated, vary in the	
earlier stages of growth from a green to a bronzy-green shade, and ar	e
from five to seven inches in length by about a quarter of an inch i	
width. As the plants get stronger, the leaves at the ends of all the principal branches assume a bright orange-red color, and become more elor	
gated, generally being from ten to fifteen inches in length, forming mag	<b>-</b>
nificent bright-colored plumes, and giving the plant a most elegant an	. <b>50</b>
picturesque appearance.  1010 Aquilegia glandulosa (true). We are in a position to offer seed of the	
variety, true. Flowers gathered from the bed from which the seed wa	Pla Pla
saved measured four inches in diameter	25
1012 — Rubra. "Two novel forms of Columbine have recently come under	) 20 )r
our notice. The one is a single red, with the petals margined with white	<b>)</b> .,
forming a red centre; the other a deep chocolate color margined in similar manner. They are distinct from any other varieties.".	25
1013 — Hortensis. Dark brown. Very fine variety, reproduced true from seed	. 25
1014 Balsam, Double. Scarlet red. (Impatiens Balsaminea atrowanguinea.) Ver	y
fine plant, splendid color  1015 Centaurea Clementei (Veitch). The foliage is very elegant, and covere with a snow-white down. The numerous ramifications are terminate	. 50
with a snow-white down. The numerous ramifications are terminate	d
by an inflorescence of straw-colored florets. Splendid for edges of large groups, the centres of other colored beds, and for isolated clumps.	e . 25
1016 Cineraria Maritima candidissima. This variety may be been described a	.8
possessing the substance and general character of Cinera is maritima	ı,
but a more decided white color, combined with the dwarf habit and peculiarly graceful and serrated form of Centaurea candidissima.	- 25
1017 Coleus finest mixed. We have received a few seeds of this favorite plan	
from a celebrated German grower, which we can recommend as very fine	э.
These beautiful, fine-foliaged plants cannot be too highly estimated for	
garden decoration. Sow seeds same as Calceolaria. See page 9 .	50

1018 Gilia Liniflora. Remarkable and pretty species; of branching habit, with deeply-palmate foliage, and large white flowers three-quarters of an inch in diameter; forms a bushy tuft nine inches high, and the same in width, 1019 Ipomea fine Mixed. (New Morning Glory.) An elegant and highly or any property group of glimber, with handgroup and shows flowers of spining.	.25
namental genus of climbers, with handsome and showy flowers, combining many brilliant colors with pure-white margins varying in shade from the most intense blue to the most delicate cerulean; many beautifully striped. For separate sorts, see page 74. See Frontispiece	.25
dwarf race of Larkspurs, the stems of which attain hardly one foot in height. Close to the ground the stems throw out beautifully-curved branches, which diminish in length as they approach the top of the principal axe; thus giving to the whole plant the appearance of a Candelabra	.25
1021 Mignonette, Parson's white. Superior in odor, habit, and color, being nearly pure white, and cannot fail to become a general favorite. The	
spikes are large and beautifully shaped. One plant suffices to perfume a whole house. A great acquisition  New Crimson-flowered Giant. A new variety, quite distinct from all other sorts, being robust in habit, with very large spikes of hand-	.25
some flowers of exquisite fragrance, and is a free and perpetual bloomer. We consider this the best variety of Mignonette in cultivation.  1023 Marigold, Orange African Quilled. A very double variety of Marigold,	.25
with quilled petals; a striking novelty, and very showy 1024 Nemophila Maculata albida. The individual flowers are larger than a	.25
1024 Nemophila Maculata albida. The individual flowers are larger than a half-dollar; and the general effect of the white (as brilliant as frosted silver) contrasted with the bright purple blotch on each petal of the flowers, which are produced in great quantities, is of a character to insure its	
becoming one of the floral favorites of the season	.25
1025 Oxalis Valdiviana. A very strong-growing, still compact, new Oxalis; the sweet-scented, bright-vellow flowers are well up out of the foliage.	.25
1026 Pansy Cliveden (mixed colors). These invaluable early spring-flowering	
bedding-plants are so universally known and admired that comment on them at our hands is quite unnecessary; suffice it to say, they are becom-	
ing more popular every year; and for effect, when grown in masses, or used as edgings for beds, they cannot be surpassed	.50
1027 — Odion, of fine blo*ched, very splendid beautiful large-eved flowers.	.50
1028 — Beauty of St. Osyth (Black). The darkest Pansy ever raised; equal in size to Claribel, and as free a grower and bloomer as the Cliveden	.50
1029 — New Dark Violet Blue. The color of this flower is as stated in the name, — dark violet blue; large blossom, of good substance, free bloomer,	
and, as a bedding-pansy, is a plant of great beauty	.50
1030 Petunia, new fringed varieties. Consisting of a great variety of colors, beautifully and finely fringed	.50
1031 — Double, striped. From large-flowering striped Petunias, carefully fecundated with double varieties	.50
1032 Perilla Nankinensis fol. Variegatis. The foliage of this new variety of the well-known and highly ornamental dark brown Perilla Nankinensis is	.00
variegated, and striped with brilliant rosy carmine, and sometimes even	.25
with white, producing a striking and charming effect  1033 Phlox Drummondii Heynholdi. The New True Scarlet Phlox (Be-	.40
nary). There is already in our gardens a bright variety of much value, known under the name of P. scarlet (coccinea); but its flowers, though of	
a very brilliant color, are far from being the true scarlet, and only of a	0.5
radiant, bright dark-crimson tint  1034 Salpiglossis Nigra, or New Black. A new variety, recommended for its	.25
decidedly distinct character as a black blossom  1035 Statice spicata. This charming early-flowering annual continues in bloom	.25
a long period. The plant forms a spreading tuft of lively emerald green,	
from which arise a multitude of ear-like spikes of lovely rosy-pink flow- ers. Beautiful dwarf beds or edgings can be made with it. For pot cul-	
ture, it is very u-eful and pretty,—equally valuable for winter bouquets, 1036 Sweet William, pure white (Dianthus barbatus albus). Pure white	.25
blossom, large, and good substance	.25
1037 Wallflower, New Golden, Tom Thumb. A first-class novelty; habit compact; color fine golden orange; petals of good substance, and flowers large; calyx delicate green, instead of dark brown, as in other wallflowers	.25
1038 Zinnia elegans, double white. Fine, bushy, vigorous-growing sort, with very large double white flowers, produced in succession during the whole	
of the summer	.25
1039 — elegans, Double Orange. Another color reproduced true from seed: very good	.25

### NEW AND CHOICE POTATOES.

### BRESEE'S KING OF THE EARLIES, or No. 4.

This is without exception the earliest variety in cultivation, having been carefully tested by many prominent agriculturists in various parts of the country the past season, and by them pronounced from five to ten days earlier than the celebrated Early Rose, and fully its equal in quality, productiveness, and general appearance. Vines quite dwarf, averaging from ten to twelve inches; leaves large; tubers large and handsome, roundish, and slightly flattened; eyes small and somewhat pinkish; skin flesh-color, or dull pinkish-white; flesh white, floury, cooks well, and is of the best quality for the table. Has thus far proved very hardy, and the earliest in cultivation. A silver medal was awarde to Mr. Bresee for his seedlings, by the Massachusetts Horticultural Society, in the fall of 1868. Four pounds, by mail, postpaid, \$1.00. Per peck, \$1.00. Per bushel, \$3.00. Per bbl., \$6.00.

### EARLY ROSE.

This was the first of Mr. Bresee's Seedlings, offered in January, 1868, and has now been before the public for the past two seasons, during which it has attained a popularity unrivalled in the history of the potato. We have supplied many thousands of our patrons, in every section of the country, from Maine to California and Oregon, in lots all the way from one pound to one hundred barrels each, and have yet to hear the first word of complaint; all are more than satisfied, and are loud in its praises. It has now become the standard variety for earliness, quality, and productiveness. Its average yield, as far as heard from the past summer, has been from 80 to 110 barrels to the acre. Four pounds by mail, \$1.00. Per peck, 75 cts. Per bushel, \$2.00. Per bbl., \$5.00.

### BRESEE'S PROLIFIC.

This variety originated with Mr. Bresee, in 1861, and are from the same seed-ball with the Early Rose, both seedlings of the Garnet Chili. The vines of Bresee's Prolific are of medium height, quite bushy, somewhat spreading, large leaves, have produced no seedballs; tubers large, regular in shape, and very smooth, slightly oblong, somewhat flattened; skin dull white, inclined to be russeted; eyes but little depressed, and slightly pinkish; flesh white, cooks quickly; is very mealy, and of excellent quality; yield very large,—often exceeding a hundred fold; matures about three weeks later than the Early Rose, and will prove a most valuable variety for field-culture. Four pounds by mail, \$1.00; per peck, \$1.00; per bushel, \$2.50; per bbl., \$6.00.

### BRESEE'S PEERLESS, or No. 6.

The latest and best of all of Mr. Bresee's Seedlings for the main crop. This is also a seedling of the Garnet Chili, and originated from the same seed-ball as the Early Rose. Skin dull-white, occasionally russeted; eyes shallow, oblong; flesh white, mealy; grows to a large size, often weighing from one-and-a-half to two pounds, and enormously productive. At a trial before a committee of the Massachusetts Horticultural Society in September last, this variety obtained more votes as to quality than any other of Bresee's Seedlings. Four pounds, by mail, \$1.00; per bushel, \$2.00; per bbl., \$5.00.

#### LATE ROSE.

This valuable new seedling winter potato is now for the first time offered to the public. In its color, habits of growth, and general appearance, it resembles its parent, the Early Rose. 1. It is of much better quality for table use, being white fleshed and fine grained, cooking very dry and mealy. It has a peculiar, rich, and delicate flavor. 2. Its yield is enormous. 3. Its keeping-quality is unsurpassed. In the same cellar, at planting time, when the Early Rose were so badly sprouted and wilted as to be unfit for table use, these seedlings had not sprouted, and were as crisp and solid as when first dug. They remained in good condition for cooking until the new crop of Early Rose came upon the table. They also grow in a compact cluster in the hill, making them very easily dug. They ripen about with the Orono or Jackson White, thus having the whole senson to grow in. Four pounds, \$1.00. One peck, \$1.50. One bushel, \$5.00. One barrel, \$12.00.

Climax, Early Mohawk, Goodrich, Excelsior, Harrison, Jackson White, White Peachblow, Lapstone, Kidney, and all leading sorts, at the market price.

Orders will be booked, and the potatoes forwarded on and after April 1, when they will be free from danger of frost. They can be forwarded earlier if desired, at the risk of the purchaser. The prices of above potatoes variable according to the market.

### POTATO SEEDS.

### GLADIOLUS.

### SPLENDID FRENCH AND BELGIAN HYBRIDS OF GANDAVENSIS.

FORWARDED BY MAIL TO ANY ADDRESS, POST-PAID, AT CATALOGUE PRICES.

THE new hybrid productions of the Gladiolus Gandavensis are, without doubt, the most superb flowering-bulbs in cultivation, producing their magnificent, long, and densely-flowered spikes of bloom, varying from white to rich salmon, and brilliant carmine to the most intense scarlet or crimson. A single bulb will often give two or three stems of bloom; and a succession of flowers will be produced for two months.

General Treatment. — The bulbs should be planted as soon as the ground is fairly dried in the spring, and all danger of frost is over; planting may be made every two weeks until the middle of June, to secure a succession of bloom. Plant the bulbs from two to four inches deep, according to their size. The soil should be enriched with well-decomposed manure, and well pulverized. The plants should be well staked, and the bloom will be magnificent. When the frost has killed the leaves, or before, if the leaves, by turning yellow, show the ripening of the bulb, the bulb should be taken up, dried rapidly in full sunlight, and the new bulbs separated from the old. Should be kept during the winter in a dry, cool cellar, free from frost.

A discount of five per cent from catalogue prices will be made when one dozen varieties are ordered, ten per cent on two dozen varieties, and fifteen per cent on fifty varieties. Purchasers will please state whether we may substitute, in the event of our being out of the

varieties ordered.

### CHOICE MIXED VARIETIES.

We have a fine collection of mixed varieties, saved from seedlings, and others where the names have been lost, which we offer at \$1.00 to \$2.00 per doz., by mail, postpaid. By the hundred, prices on application.

### GLADIOLUS LYONII.

Cardinalis habit. Flowers large spreading petals of good form; color pure white, vividly flaked with bright scarlet; very free bloomer, and altogether a most exquisite variety. Spikes of bloom were exhibited at the Rose show at the Massachusetts Horticultural Society last June, attracting great attention; highly recommended for pot-culture. Price 75 cts. to \$1.00 each.

### TIGRIDIAS.

A genus of Mexican bulbs; grows about one foot and a half high, producing flowers of the most exquisite beauty; the flowers large, about four inches across, of singularly curious shape, and the color of each variety gorgeous, and purely contrasted. No flower can exceed it in beauty. In bloom from July to the first of October. In autumn, take up the bulbs, and keep them in a dry place, away from frost, until the time of planting in the spring. Tigridias by mail, postpaid.

Conchiflora. Orange and golden-yellow, spotted with black. 15 cts. each; \$1.25 per doz. Payonia. Richest scarlet, tinged and spotted with yellow. 15 cents each; \$1.25 per doz.

### DOUBLE TUBEROSES.

The Tuberose is one of the most delightfully fragrant and beautiful of summer-flowering bulbs, throwing up small spikes of double white flowers, two to three feet high, which remain in bloom a long period. The bulbs may be planted from February to May. When they are needed very early, they may be planted in the greenhouse or hotbed in February or March; and, for a succession of flowers, in April and May. In planting, remove the useless small offsets around the main root, and place a single tuber in a pot four or five inches wide. Use good loam and leaf-mould, with good drainage. Start them slowly upon a temperate heat, in the hotbed or forcing-pit, or later in the season in a frame. Water slightly at first; and, when the bulbs begin to grow, increase the quantity. Those started early should be supplied with a good bottom-heat till May, when they may be shifted into pots six or seven inches wide. By the first of June, all may be plunged out in a warm border, staking each plant to prevent their being broken by the wind. On the approach of cool weather, in September, those remaining in bloom should be removed to the conservatory or parlor, where they will continue in flower for a long period.

Fine bulbs, \$1.50 to \$2.00 per dozen; bulbs started in pots in May, \$3.00 per dozen.

#### VALLOTA.

A splendid bulbous-rooted plant, allied to the Amaryllis. It blooms in August, throwing up its strong stems about one foot high, with from five to eight brilliant, scarlet, lily-like flowers; very ornamental for bedding out in summer, or cultivation in pots and vases.

Purpurea, each 50 to 75 cts.

### AMARYLLIS FORMOSISSIMA, OR JACOBEAN LILY.

This is a beautiful summer-flowering bulb. It generally produces two stems, one after the other, each bearing a large lily-like flower of the richest crimson-velvet color; its golden stamens drooping gracefully over the lower petals, giving it additional brilliancy. Plant the bulbs early in May, in rich mellow soil. In autumn, take them up, and keep dry and secure from frost. They bloom in June. Price, 35 cents each; \$3.50 per dozen.

### TROPÆOLUM TRICOLORUM.

Pot in rich, free loam, leaf-mould, and sand, in autumn, and allow them to make way all through the winter in an airy greenhouse; the stems being trained up light trellises of some kind. After the blooming season, the bulbs should be allowed a rest of a few months. Each, \$1.00.

SMILAX (MYRSIPHYLLUM ASPARAGOIDES).

A beautiful winter climbing-plant, adapted alike to the greenhouse and conservatory. Nothing can excel this plant in beauty of foliage and orange fragrance of the flowers. It is extensively used for bouquets and floral decorations of every description.

Medium-size Bulbs, 25 cents each. Large-size Bulbs, 50 cents each. E

Extra-size Bulbs.

\$1.00 each. Seed per packet, 25 cents.

Note. — This plant is grown and used most extensively as a decorative vine by every florist in the vicinity of Boston. No lady, dressed for a party, feels her toilet complete (if natural flowers are worn) without a spray of Smilax appended to her hair.

### JAPAN LILIES.

Our collection of Lilies comprises all the most beautiful kinds, including ten of our own seedlings, which are unsurpassed by any yet produced. A full description will be found in our Bulb Catalogue. The following are the principal varieties of the Japan:

Lilium	Album.	Pure white.	Each			1.6		.40 to 8	\$ .75
	Rubrum.	White, with	deep o	rimson	spots			.40 to	.75
	Roseum.	White, with	rose-co	olored sp	oots			.40 to	.75
	Named S	eedlings. (.	All sup	erb.)				\$1.00 to	1.50

### MADEIRA VINE.

A beautiful summer climbing-plant, of rapid growth, completely covered with long, graceful racemes of deliciously-fragrant white flowers. Each 15 cents to 25 cents.

### MUSHROOM SPAWN.

DIRECTIONS FOR GROWING MUSHROOMS. The only conditions required for the healthy growth of Mushrooms are a mass of short dung, heated to from fifty-five to sixty degrees, and lumps of Spawn about the size of walnuts, six inches apart, just beneath the surface; the whole covered with an inch thickness of good light friable earth, and three or four inches of straw, or litter of any kind, to keep in the very moderate warmth. This can be

managed in any dark cupboard or celler; and the size of the bed is immaterial.

Take of horse-droppings from the stable, without the straw, as much as will make the bed the size you want it, a foot thick; put this anywhere out of the weather, away from the light and draught. Let this be pressed, but not hard; and ir a few days, when it is nice and warm on thrusting the hand in, get the Spawn, and break the cakes in small pieces and put them in all over the dung, even with the surface: upon this being patted down smooth, but not hard, it will require from half an inch to an inch of earth all over it. Pat it down to keep it in its place, and put some loose hay or straw over it. When it approaches dryness, it must be sprinkled with water with the chill off, enough to wet the earth, but not the dung. Sooner or later, according to the attention paid to these several points, you will have Mushrooms, and plenty of them.

Best Mill-track Mushroom Spawn, per pound, 15 cents; 8 cents per pound extra by mail;

8 pounds for \$1.00, by Express.

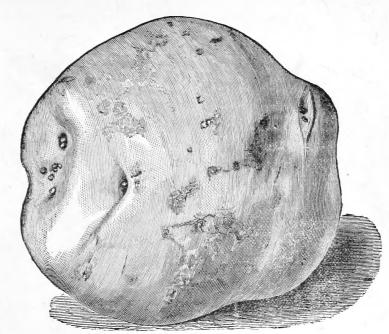

### ITALIAN BEES.

The superiority of these Bees over others is acknowledged by all. Some of the many advantages: they swarm earlier, work earlier and later, and store twice the amount of honey as the common bees. Allow about eight weeks to Italianize a hive of common bees. The queens live from three to five years. Price per swarm, \$15.00. Queens, \$5.00 each. Packed to go any distance.

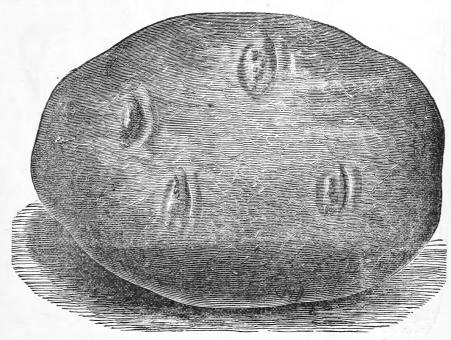

### LILIUM AURATUM. (ONE-HALF ITS NATURAL SIZE.)

Very strong flowering bulbs,			75 each,	٠	\$6,00 per dozen.
Second size bulbs,			.50 "		5,00 "
